I guess it depends on the MOS or where you were working. Where I worked, we had mandatory "OPSEC" classes (in Germany in the early 70's), covering need-to-know procedures, document and material control, and so on. We had to attend these classes every six months or so to keep our security clearance valid.

> (snip) COMSEC or COMmunications SECurity is the
> current buzzword (of the last decade or so) and
> refers to any means of encryption in military
> communications.

You were in military communications, right? If so, surely you were around a COM-SHACK or COM-CENTER. By the mid-60's, I think every radio room in the military (certainly in the Army) was called "COM" something. Out of that came many acronyms with "COM" in it, including COMSEC. When I went through training in 1970, I had a binder with "COMSEC" stamped on it (contained basic security procedures).

Then why do you persist in spreading the falsehood that hams don't homebrew equipment?

> >What would you expect hams to talk about a ham radio club meeting?
>
> It was an operating event, not a club meeting.

For purposes of our discussion, it matters not. What would you expect hams to talk about at a ham radio operating event? Did you find the question difficult?

>
> I did not expect them to be similar to other clubs.

Your life seems full of dashed expectations and false assumptions.

> When I asked different
> people about their setup, he seemed busy and not wanting to talk about it. If
> it was me, I would happily explain what I made, brag about it, show interested

The more you go on with these tales, the more I suspect that you fabricate portions so as to promote your agenda.

> >However, the technical person
> >> would feel out of place there.
> >
> >You mean around the homebrew microwave gear?
>
> Yes, once they were setup, they were much the same as the non-homebrewing Ham.

Another case of unmet expectations on your part. Don't forget, there are few women too. You might want to take up flower arranging. There'd be plenty of women. An offer of a steak dinner and a couple of drinks might might persuade one of them to socialize with you.

> >Are you telling us that they sat around conversing with each other by
> >using their homebrew microwave gear while at the meeting?
>

> They contacted other Hams, not the same hams that were at the gathering, of

Great. I'll assume that they spoke to one another at this event. That's
part of socializing.

Mowing my lawn takes a couple of hours with a riding mower. That
doesn't require much physical activity and I normally don't socialize
while mowing my yard. On occasion, I'll eat some unhealthy food
afterward. You'd be disappointed if you came to visit when I was mowing
my yard.

> >> Most do not like the
> >> technical aspect, either. You'll find that at any random Ham Radio

I imagine it does "work" provided that your intention is to render
your transmission unintelligible to the receiving station. What I
don't understand is why anyone would want to deliberately do that. Has
ARRL or someone recently started handing out a new award that I
haven't heard of - for QSOs *not* in the logbooks?

wrote:

>My statement about future hams having no experience with Morse/CW
>is plain FACT, not opinion, Bill.

There seem to be quite a few hams now who have no experience with
Morse/CW. There are 257,319 Technicians in the ARS, according to the
most recently posted figures from N2EY, some of which are undoubtedly
former Tech-Plus licensees renewed as Technician, but most of whom are
undoubtedly of the no-code variety. Even if 20% are renewed Tech+ then
that's still over 200,000 hams with no Morse/CW experience. And that
is a lotta hams - two or three football stadiums full, in fact.

>It is also a fact that because of their
>lack of experience, they are self-disqualified from having an "opinion"
>about the subject.

I disagree - it's not a fact, it's your opinion. I also happen to
disagree with that opinion.

Larry, no disrespect intended here, but what's your current opinion of
eating...oh...how about...elephant dung, for example?

Most of us would say that the idea sounds quite disgusting, no thanks,
I'll pass. Same goes for cat dung, rat dung, bat dung, or any other
kind of dung for that matter. I don't need to have tasted 'em all in
order to form that opinion. Similarly, one does not need to have
learned to send and receive CW at 50 WPM in order to decide that one
is not interested in that particular mode.

Note that it is not my intention to equate CW skills with animal dung,
the skill remains a useful one to have and I don't begrudge those who
enjoy CW their pleasure at using the mode - not for a single minute.
I'm merely pointing out that expertise at a particular activity is not
a prerequisite for deciding whether or not one wishes to pursue said
activity. Do I need to be able to deadlift 600 pounds in order to
decide I don't wish to be an olympic weightlifter? Nope. Can I
currently deadlift 600 pounds? Nope. Does that render my decision to
not try to deadlift 600 pounds invalid? Nope.

>>> That's not the same thing, Carl. I was referring to their "opinions," or
>>> subjective impressions, of the Morse code. The decision-making process
>>> they apply to decide whether or not to attempt to learn it is a much more
>>> objective process.

Assuming that you agreed with my opinion that eating animal dung is
not a very good idea - did you arrive at that conclusion through
subjective or objective reasoning?

>>So work te process, be a recruiter for morse.
>
>As has always been the case, the ability of any advocate of Morse code
>testing to "recruit" new hams to the mode is limited to relating their
>own experience. The new hams will be receptive to his in varying degrees,

...which will undoubtedly be directly proportional to the number of
times that another ham patiently explains the relative merits of the
mode and encourages them to give it a try, and inversely proportional
to the number of times that another ham calls them lazy, good for
nothing, not "real" hams and similar rhetoric.

>yet they will, in fact, not have the same incentive to actually give it a try
>that existed under the previous licensing process.

Hmmm, let's see...

Incentive under the old (current) licensing process: Either submit to
being coerced into learning code at a rate of at least 5 WPM, or
remain on 6m and above where, except for a relatively small number of
weak-signal enthusiasts and on repeaters that use a Morse ID'er, the
use of CW is virtually nil anyway and so their lack of Morse
proficiency matters not.

Incentive under the future licensing process: Either voluntarily
develop CW skills, or be content to either remain on the crowded phone
bands or use one of the other digital modes where, except for the
Morse ID on a RTTY or other signal or on 10m repeaters, the use of CW
will be virtually nil anyway and so their lack of Morse proficiency
matters not until they want to work the CW ops for higher point totals
during contests or to put those elusive CW ops' calls in the log.

There's definitely a difference, but I don't think it's as big a
difference as a lot of people may think.

>In the end, whether or
>not they learn it is strictly up to them, as it has always been.

Agreed...

>The problem

Ahem...the difference...

>is, in the future, they will still

Ahem...they will finally...

>have full HF privileges, so they no longer
>have nothing to lose by simply forgoing the whole Morse/CW mode.

Larry, you're supposed to be trying to convince them to try CW, remember? They *do* have something to lose by forgoing the mode. You know it, and I know it too, even though I happen to have chosen (for now at least) not to pursue the use of CW. I suspect you'll "convert" more no-coders into CW enthusiasts by pointing out what they're missing than you'll "convert" by ostracizing and villifying no-coders.

>They will, however, most likely petition the ARRL and the FCC for more
>HF phone allocations -- and where do you think they'll come from?
>
>73 de Larry, K3LT

Ahhhhh! So this isn't about the merits of the mode after all, it's a turf war! Why didn't you just say so in the first place?

I'm going to wet my pants laughing if it ends up being PSK31 or Hell or SSTV ops rather than phone ops that end up populating those parts of the bands.

Of course I do, he's very active on the airwaves in this area's 2m/440
repeaters and also operates mobile HF CW to boot. Also a fixture at
hamfests and the odd club meeting, too.

>If so, next time you see him or talk to him
>on a local repeater, let him know you know me and I'm sure he'll tell
>you all about me and how we met on 10-meters over 20 years ago!

You can hook up with him on 40m CW of course, but if you really want
to surprise him, get EchoLink and pop onto the WB2JPQ interlink system
here in western NY. Dick has his 146.835 machine connected to the
Echolink network. That machine's part of a system of linked repeaters
that covers most of this end of the state (from the Pennsylvania line
to well east of Rochester...farther when the temperature inversions
along the south shore of Lake Ontario duct the signals from the
Rochester area machine up into the Watertown area), and Pete is
frequently on one of the linked machines, when he isn't on the BARRA
link system chatting with Ted, WA2HKS.

>Whenever I visit in the WNY area, I try to have breakfast with Peter --
>pehaps you could join us sometime!

Then there is the matter of that roast beef sandwich you still have
coming...though I suppose if you'd prefer a comparably priced
breakfast...

Shoot for a Tuesday or Wednesday morning. Those are my two days off
work. Other days I work from 5AM to 1:30PM, so unless you're into
eating really late breakfasts, or want to make it lunch instead
(sending us back into roast beef territory).....

Huh??

I passed the General class written without cracking a book...it was
the code that took me a long time to learn. The theory I learned
through some 35 years as a radio hobbyist (with some helpful
experience repairing televisions part time shortly after high school)
before finally getting a ham ticket.

In Scott's case, what he's learned prior to taking the tests almost
took him through the Extra class written.

What's the difference whether you got the knowledge from a book or
from practical experience, as long as you have that knowledge? And how
does getting it from practical experience instead of from the book
prove anything at all related to the supposed dumbing down of the ARS?

Try cracking a book on logic, OM...pay special attention to the part
where they talk about non-sequitur. ;-)

Yet for anyone interested in something other than CW, the current
situation is quite different, isn't it? If he likes phone, or PSK31,
or SSTV, and that's what it takes to make him happy, he still MUST do
other activities (i.e., learn CW) in order to pass the current
licensing requirements.

Of course, once Part 97 is modified to reflect the changes in the
international requirements, this will presumably no longer be the
case.

In my opinion, if FCC wants to fast-track this process, it will do so,
and if it doesn't want to fast-track the process, it won't. Bearing in
mind that comments made by FCC in its R&O on restructuring sounded as
if they'd just as soon have done away with code testing at that time
were it not for the international requirement, the question then
becomes a matter of whether or not the same powers-that-be inside FCC
are still in position to make those changes now that the international
requirement has gone the way of the vacuum tube.

>I learned the hard way. I waited 14 years, and lost out on what could have

You waited 14 years...what's that make you?

>I'll provide them some incentive: As of now, 20 July 2003 at 0321 hrs UTC,
>any prospective US ham who learns the code at the gruelling speed of 5
>WPM, passes the test, and gets their Extra will be considered by me to
>be a full-fledged ham as long as they regularly use at least one non-voice
>mode on-the-air at least 40 percent of their total operating time. Wow --
>is that a deal or what?

Ummm...not really, because:

1) It is FCC who decides who is a full-fledged ham (by issuing them a
license) and who is not - not Larry Roll (and for that matter, not me
either); and

2. Any *prospective* US ham who learns the code and gets their Extra
(as opposed to getting their General) will be villified and condemned
by you, as well as others in this NG, as a product of the (supposedly)
dumbed down written exams, even if they operate CW 100% of their total

operating time, and

3. The limitation of recognizing only *prospective* hams in this manner ignores the currently licensed Novice, Technician, General, and Advanced class licensees who have already passed a code test and who do not have an Extra ticket due to lacking Element 4 credit, even if they already meet your other requirements, and

4. Whereas someone else in this NG claimed that the fact that one of the participants in this NG missed passing Element 4 by two questions without cracking a book was proof of the (supposed) dumbing down of the ARS, and since it is possible to pass Element 1 without cracking a book, it could be argued that you are encouraging prospective hams to participate in the (supposed) dumbing down of the ARS that you've been whining about almost constantly for the past 5 years (at least) by ignoring the technical requirements of the written exams in favor of gaining proficiency with Morse code...thereby contradicting your own assertions in this NG that knowledge of CW does not artificially lower the level of technical proficiency in the ARS (and I happen to agree with you that it doesn't, but if you're going to shoot yourself in the foot here, Larry, you could at least use a .22 and aim for your little toe instead of putting a .50AE right through your instep!).

It also occurs to me that by the time you qualify for membership in QCWA, the majority of US licensees may no longer care whether one of their fellow hams knows anything about CW or not - and FCC almost certainly won't by then - if this is the best incentive you can come up with for people who aren't required to learn the code in order to get the license to develop Morse/CW skills.

If this *is* a deal, it's a raw one.

How were 2m operating conditions there, anyway? Seems like there might
be a lot of temperature inversion ducting going on with so much water
around. Just wondering.

>Alun, my opinion of you as a ham is not dependant on your usage of CW.

That's not quite what you said in your last post to this thread, where
you agreed to consider a full-fledged ham an Extra who operated at
least 40% of the time in CW.

>All I ask is that you don't whine about it, and that as a ham, you make an
>effort to do something more challenging than just yakking into a
>microphone. That would imply the use of at least one digital mode. CW
>operation would be the icing on the cake, and go a long way to impress
>me. However, I'm not here to be impressed by you, or anyone else. At
>the end of the day, your participation as a ham will always be driven by
>whatever provides you with the greatest satisfaction, and I don't begrudge
>anyone having fun on their own terms.

Yeah...as long as "their own terms" happen to measure up to your
standards with respect to choice of operating modes. Come on, OM,
that's two-faced and you know it. Whether it's CW, phone, PSK31, SSTV,
packet, Hellshrieber, MSK16, or ATV, it's still radio, and this is the
Amateur *Radio* Service.

>However, the code testing debate
>was started by those claiming that code testing was impinging on the
>development of technical skills within the ARS, which is patently untrue.

As far as I'm concerned, the code testing debate started back in 1975
when the Communicator Class license was proposed. Unless a no-code
license was proposed before that, in which case, feel free to
enlighten me.

>Therefore, before you judge me, you must understand where I've been
>coming from throughout this debate -- that code testing imparts a
>useful skill on radio amateurs, and increases their overall communications
>capabilities. Those who don't know the code or use it regularly simply
>are not qualified to judge those who support code testing requirements.

Ever heard this before: "Judge not, lest ye yourself be judged?"

I for one would like to see a little less judging and a little more
mutual respect for our fellow hams. At the risk of sounding like a
broken record (anybody remember those?), it's all radio regardless.
Anyone who has bothered to obtain the license must have some interest
in radio, or so one might tend to think...so why not view that
interest as something in common and leave it at that?

>your ticket!"

I was 8 (no typo, that's eight) when I got interested in radio as a hobby. I was 42 when I got my first ham license. I undoubtedly could have passed the written tests through General while I was still in high school. The main reason I didn't was the code test. Of course, I didn't spend the intervening years in a vacuum - I learned a lot about computers, and I spent a lot of time twiddling the dials on a general coverage receiver and playing with scanners and thus still dabbled in radio. Even did the 11-meter bit for awhile, until the supposed "energy crisis" in 1977 led to the CB craze of the late 1970's and everybody and their brother crowded onto what was then just 23 channels and began ignoring Part 95, thus ruining the band forever.

For what it's worth, I would and do give prospective hams pretty much the same advice - take ten bucks down to the very next VE session you can make and keep taking written tests until you flunk one or run out of tests to take. If you know Morse, take Element one as well, if not, you have a year to learn it before your CSCEs run out, and once you pass it once you never have to touch it again if you don't want to. Seems that in this area, about one or two in ten end up pursuing the use of CW once they've passed the 5 WPM test (i.e. actually use the mode on the air to make one or more contacts). On the other hand, I know a couple of folks who have had a General ticket for over a year and haven't even operated on HF yet, including at least one who has a working HF station in the house (spouse uses it) but simply prefers ragchewing with friends on two meters instead.

Again, to each their own - my feeling is, it's all radio regardless of what mode one chooses to employ, and upon satisfying the licensing requirements that happen to be in effect at the time one takes the tests, it's up to each individual ham to decide how he or she wishes to make use of the privileges that license bestows - and it is not up to me to judge how someone else chooses to enjoy the hobby.

Or Roll-esque, or Carroll-esque, or.....

> Some can't get enough pretty, engraved certificates. Those prove you are
> SOMEBODY!!!

I'm not an award collector personally - my enjoyment comes from making the contacts on the radio, and I feel no real need after having done so to further prove that I can overcome the deficiencies of international snail-mail in order to get a piece of paper that merely proves what both I and the other op already know to be true (I'm in his log, he's in mine).

Nevertheless, I can well understand the attraction to some of these awards, as they allow an operator to set a goal for himself (or herself) - working at least one station in all fifty states or whatever - and then feel a sense of accomplishment when that goal is achieved. Of course, one can do the same thing without bothering to obtain the certificate. I've worked about 18 states to date, but the only QSL cards I have are ones that the other op sent me because he (or she) needed mine for worked all states - mostly folks I worked on the Century Club nets on 40m and 80m phone.

> You need a Worked All Certificates award.

There are so many awards out there, it would be virtually impossible to collect all of them in a single lifetime, even if one did nothing but eat (in the shack), sleep (very little), and operate.

In light of comments I've read elsewhere, I'm forced to wonder if that would be legal. I'm certainly no lawyer, but from what I've seen elsewhere, the Senate has to ratify the treaty, then the process of NPRM begins, and so forth.

If it *is* legal, then it wouldn't surprise me all that much for FCC to come out and say, "Okay, we had enough of this issue back in 1999, as of today all Amateur Radio licensees and all applicants for Amateur Radio license of any class are granted blanket Element 1 credit, game over, thanks for playing."

Ed,

In reply to your question on the technical requirements, (apologies in advance for the verbose response but would like to ensure that the implementation difference between European PLC/PLT and our BPL is understood by everyone).

In Europe BPL (PLC/PLT) is connected to the 220V (European voltage) at the transformer that feeds 100~200 homes. Typically backhaul from the transformer is a dedicated data line. European power lines are underground and the emission limits are lower (NB30) but there are still major interference problems. At NB30 emission limits PLC/PLT is good for about 900 feet.

Here in the U.S. our power system architecture is different with a transformer for 4~6 homes in the suburbs, in rural areas many homes will have individual transformers as the houses are far apart.

BPL is transmitted down (and emitted from) the 11KV medium voltage lines that go to the house transformers. 11KV lines have significant attenuation (and radiation) at HF.

The repeater issue has been "swept under carpet" as they are expensive and need a truck roll to install. The BPL lobby's focus has been to persuade the world that every socket magically becomes an Internet connection.

For details on a typical BPL repeater check;
http://www.amperion.com/products.asp

There are no details on specific repeater distances at the Amperion site, just a vague comment about data rates and latency. Latency will cause problems for VoIP and gamers (the ping numbers will be bad).

It is clear from the Amperion information that these repeaters are complex as they decode the data. Presume that power is somehow picked off the 11KV line.

The source for the 2,000 feet is here;
http://www2.arrl.org/news/features/2003/06/01/1/
"According to industry sources, data rates of up to 20 MB/s are possible for distances of up to 2,000 feet, and of up to 3 MB/s for distances of up to 4,000 feet."

The ARRL comments are for raw data rates under very ideal conditions, actual download speed shared by all customers will be about 35% of the raw data rate. The BPL systems both in Europe and the U.S. have symmetrical upload/download speeds which is puzzling, as would expect users to care more about download speeds.

If the FCC raises the emission limits, then the repeater distance will be greater. Suspect if they don't, the BPL operators will still turn up the power anyway and wait for complaints

>CW key or paddle?
>
>Kim W5TIT

Kim:

Don't look now, but yakking into a microphone is something that anyone
can do without learning any new communications skills. Use of Morse/CW
requires the acquisition of a new, very useful comm skill (Morse code) and
the patience and initiative to develop this skill adequately to become an
efficient, effective CW operator. The content of the "yakking" may be the
same, but the difference is that the CW operator is yakking in a totally
different way, using a skill and mode which offers benefits and advantages
not found in voice modes.

Since you have no practical on-the-air experience using CW, I don't
expect you to appreciate this, and consider you to be unqualified to
render an opinion on the subject.

The fact is, my on-the-air operating the past two years or so has been about 80% digital modes, mainly PSK-31 and RTTY. I've been QRT since Field Day, gotta get my station put back together.

Been awhile since this was posted, but you'll recall that I had to cut
my session short on that day in order to participate in a public
service event...so time now to catch up:

On Tue, 15 Jul 2003 21:02:12 -0500, "Kim W5TIT" <fahgedit@nomail.net>
wrote:

>Yeah, I remember when I first discovered there was "newsgroups" and then
>found this one. I thought to myself, "Self, this is great. Meet more hams
>and have great ham discussions." NOT. Pretty much the first exposure I had
>to anyone on the newsgroup was Larry Roll, with his obsession about my
>callsign...blah, blah, blah.

I was here when you first began to post here. I was off doing
non-internet related activities for about two years. Upon getting back
on the internet and checking the then-current postings to this NG, the
very first thread my newsreader downloaded contained a post where
Larry was making some of his usual comments about your call. I think
what surprised me was not that he was making the comments, but rather
that you were still in here putting up with it. I'd have either
killfiled him long ago, or just quit reading this NG.

>Then I learned that many of this newsgroup's participants can't have any
>kind of discussion without pulliing some kind of ego trip up out of their
>pants.

Heh...Let's just say that, for reasons that I won't bother to explain
here, I try not to pull things out of my pants in public.

>The long and short is that this newsgroup became a way for me to take the
>day's frustrations out and pretend that my targets were this boss, or that
>boss, or this co-worker or that co-worker...heh heh

I never harbored any illusions that my participation in this NG would
relieve any frustrations. In fact, it often adds to them. Fortunately,
my job isn't very stressful, so I can read some of the drivel that
gets posted in here without blowing up on people the way I might have
done a few years back.

Nevertheless, you have an interesting concept there. I can't help but
wonder about the person you imagine Larry being - given the friction
between you two in here, it's rather surprising that a real-world
version of him within range of you in real life hasn't been shot,
stabbed, strangled, and buried in armadillo dung by now, with you
holdfing the gun, knife, piano wire, and shovel. But then, you just
posted in another thread that you don't believe in killing, so...

>I think the public service aspect is one of the greatest things about ham
>radio...although I'm not much involved any more. Around here, one spends
>more time dealing with political garbage than getting any real constructive
>stuff done. I wasn't in it just for the sake of getting out there and being
>in the middle of storms--I also wanted to see this area become really great
>and one to be looked up to.

My involvement in the emergency/public service aspect of the ARS is
basically twofold.

On the one hand, the club I belong to has had a longstanding
relationship with the emergency management department in the city
where our club meetings happen to be held - although we serve a much
wider area than just that one suburban city - and I'm currently
co-coordinator of that club's emergency/public service communications
team. The emergency management EOC doubles as a club station during
contests, which we treat as drills in that it gives us a chance to get
our people, particularly the newer ops, into the EOC for some valuable
hours using the same equipment they would be using if they were
helping to staff the EOC during an activation.

Our last activation for emergency purposes was a severe ice storm in
February 2002 (with attendant power outages, shelters set up for folks
whose homes were without power, etc.). We not only handled our own
responsibilities within the city, but were also able to help out the
county ARES in getting some comms up their chain of command as well (a
task made easier by the fact that we had an assistant director of
emergency management from the county in the EOC with us, serving as
the liason between the city and the county). We also did some damage
assessment on the power grid in addition to our normal duties.

On the other hand, I'm also a member of the county ARES/RACES in the
county where I currently reside (which borders the one in which the
city our club serves is located), and thus also enjoy the status of
being a volunteer disaster assistant in that county's disaster
preparedness office, a part of the county emergency services
department. I'm not in a leadership role in that organization, but of
course have been called out on activations with them as well.

If we have a storm that gets us activated, it tends to be severe
winter weather, not the kind of thing you want to be outside in.
Suffice to say, we're within spitting distance of Buffalo, New York.
It gets pretty nasty up here during the winter sometimes...to the
point of causing deaths of people who can't get inside for whatever
reason. I'm dedicated to this aspect of the ARS, but I'm not really
anxious to get myself killed while doing it!

You folks down there, on the other hand, can get more tornadoes in a
month than we'll see in ten years. We get downbursts, we get wall
clouds, but we don't usually see tornadoes (waterspouts, yes, but not
many funnel clouds over land). I guess I'd prefer to deal with what we
get here. I can take care of cold, wind, and snow by dressing
appropriately...but when a tornado comes along, it doesn't matter much

what you have on.

>Thank you. Not used to someone being able to read between the lines
>here...LOL

It's a very useful communications skill. Maybe we should have a test
for it in the ARS?

>Know what? It's Tuesday and I'm still tired...

I work Thursday thru Monday. Tuesdays are my Saturdays. That means on
Monday when everybody else is grumbling about how much they hate
Mondays, I'm generally in TGIF mode. It also means I'm generally more
tired on Monday than any other day of the week. So, been there, done
that, bought the t-shirt, spilled coffee on the t-shirt. :-)

I'm not all that fond of CW, insofar as it's not one of the things I
personally enjoy doing. CW ops, like any other fellow ham, are welcome
around here any time. As for not eating each other, someone else's
comment about CQ WPX seems to be as good or better a retort than I can
think of at the moment.

The comparison was valid to the extent that Hitler was wrong, but was
blinded by zeal and therefore unable to see past the end of his nose,
so to speak. Larry is wrong, but is blinded by zeal and therefore
unable to see past the end of his straight key. That is where the
similarity ends, as I have already explained to Larry in another post.

>> >> but a no-coder will always claim that it isn't proven simply because they
>> >> have no way of discerning and analyzing the evidence, and they have an
>> >> agenda which would cause them to deny the outcome.
>
>Incorrect. They could always accept the evidence presented by an

>experienced CW operator.

Larry posted that, I didn't - however, I have not disputed that CW is a useful communications skill. Any communications skill is useful in a communications hobby, and any technical skill is useful in a technical hobby. For me to claim otherwise would be illogical. What I am disputing is the notion put forth by K3LT that one needs to have acquired CW proficiency in order to form an opinion as to whether one wishes to pursue that aspect of the hobby or not...an assertion which I find equally illogical.

>> Actually, all that's really required is a receiver.
>
>With an antenna.

Although on occasion I have managed to receive signals with a radio that had no antenna connected to it - and have actually even found it very useful indeed to try to do so - I'll concede that one gets a much better handle on current conditions on an HF band by listening to a receiver that has at least a reasonable facsimile of an antenna connected to it.

>> If there are a few
>> dozen CW QSOs going on at the bottom of the band, but nobody in the
>> phone portion of the band...
>
>How about if there are more CW QSOs going on than 'phone?

To use a phrase that I have always found oxymoronic: same difference.

>> happen, unless there's a CW contest going on?
>
>Coupla possible reasons:
>
>1) Propagation isn't so hot. (CW really does have an advantage over
>all commonly-used forms of analog 'phone in this regard)

...which was exactly my point...

>2) There's a 'phone contest going on, and most of the 'phone ops are
>working the contest - on another band.

...where conditions are apparently better since they support phone on that band? Then why haven't the CW guys moved there as well, to take advantage of the better band conditions? After all, they have the bottom part of that band to themselves too...

>3) The 'phone bands become obnoxious enough that folks go to CW just
>to have a decent QSO.

Well, if we're going to clutch at straws here, then we might as well also include:

4) One has tuned to the 30 meter band, where phone is not permitted.

>> >You couldn't even offer the contribution that N2EY
>> >made. An excellent example, I might add.

>
>There are plenty of examples which prove the point of CW/Morse's
>usefulness. Whether those examples constiute "proof" of the necessity
>of a TEST is a matter of opinion.

I agree. Larry, whose material is quoted here, doesn't.

>> Knowing them and being able to articulate them in this forum are two
>> different things.
>
>If someone "knows" something but cannot articulate to someone who
>doesn't, does the first person really "know" it?

I believe so. I know how to get to a certain hamfest from my house. I
doubt that I could give someone directions that would allow them to
arrive at that hamfest without getting further directions from someone
else. I may not be able to articulate how to get there, but I "know"
how to get there, and will prove it this Sept. 27 when I again hop
into my van and drive there, just as I have every year since getting
my ham license (it's only a three-hour ride).

>Kinda like the old
>saying "if you have a thing 'someplace', but you can't find it when
>you need it, then you don't really have it, do you?"

No, you don't. However, what we're discussing here isn't a material
thing, but rather, an idea. How does one manage to misplace an idea?
"Sunuvagun, it was right here in my cerebellum a minute ago!" :-)

Breakfast or lunch, it matters not to me! A Beef on Weck and a glass of Genny would be a great way to enjoy some ham camaraderie.

>Shoot for a Tuesday or Wednesday morning. Those are my two days off
>work. Other days I work from 5AM to 1:30PM, so unless you're into
>eating really late breakfasts, or want to make it lunch instead
>(sending us back into roast beef territory).....

OK, great. Like I said before, my next visit to the WNY area will most likely be over the Thanksgiving holiday, if I can manage to take some personal days off. I've pretty much given up on being home for Christmas, due to the tendency to be forced to spend an inordinate amount of time behind the snow blower! If I were to ever move again, I think I'd just go to various places and walk around carrying a snow shovel. As soon as someone asked me, "What the heck is THAT?" -- I'd stop!

John:

Negative. I was a non-ham for 14 years after I first became aware of the hobby at about age 14, mainly because I didn't want to be bothered to learn the code! Then, at age 28, I finally grew up and decided I wanted to be a ham more than I wanted to whine about the code test requirement. Once I got started, I progressed with code very rapidly, and found myself eating a lot of my words about Morse/CW when I got hooked on CW as an operational mode.

>>Anyone who waits the (up to) two years a US No-code General/Extra

>either); and

Wrong, John. The FCC just issues licenses. What kind of a ham a licensee becomes is a subjective evaluation made by other hams -- preferably by those who are, indeed, qualified to make that judgment -- like I am.

I had this concept drilled into me by my "Elmers" in my early days as a ham radio operator, and I strove to meet, and ultimately exceed, all of their expectations. Now it is my turn to make the judgments, and I do not shirk from that responsibility.

>2. Any *prospective* US ham who learns the code and gets their Extra

>with you that it doesn't, but if you're going to shoot yourself in the
>foot here, Larry, you could at least use a .22 and aim for your little
>toe instead of putting a .50AE right through your instep!).

I must have missed the thread about the Element 4 business. In any event, I don't think that passing ANY current amateur radio test element is a particularly challenging endeavor these days. With open question pools, VE testing that allows taking the test multiple times per session, and a 70% passing score, anyone who can't go into a test session and walk out with an Extra just isn't trying. The current technical requirements in the written exams are strictly amateur level, as they should be, and prove little about a prospective ham's technical competence. This he will have to prove to his/her fellow hams by actual participation, which is subject to evaluation by his/her peers. I have never made a connection between code or theory testing and "technical competence" in the ARS. It is mainly the NCTA doing that.

>It also occurs to me that by the time you qualify for membership in
>QCWA, the majority of US licensees may no longer care whether one of
>their fellow hams knows anything about CW or not - and FCC almost
>certainly won't by then - if this is the best incentive you can come

>up with for people who aren't required to learn the code in order to
>get the license to develop Morse/CW skills.
>
>If this *is* a deal, it's a raw one.

You're entitled to your opinion. The problem is, the NCTA's don't think I'm entitled to mine! If I don't follow the rest of the flock of lemmings, put on my tie-dyed tee shirt, faded jeans and Birkenstock sandals, and hold hands with them and sing "Kumbuya" as they chant their liberal, politically-correct mantra of "inclusiveness" while celebrating the end of the requirement to be tested for a useful communications skill, I may as well take that .50AE and use my radio gear for target practice, as far as they're concerned! The NCTA are classic liberals, and like all liberals, they can "tolerate" anything except a difference of opinion. Another thing that characterizes liberals is a lack of a sense of humor, which may explain why you apparently missed the tongue-in-cheek nature of my "deal."

John:

At the time, it was a VHF paradise. Great tropo-ducting openings which
pretty much covered most of Western Europe. I had a 7-element 2-meter
Yagi in my TV mast, and did quite well in spite of the fact that it wasn't
up very high (about 20' AGL). I had to keep below the peak of the roof
of my townhouse, so that's the best I could do.

>As far as I'm concerned, the code testing debate started back in 1975
>when the Communicator Class license was proposed. Unless a no-code
>license was proposed before that, in which case, feel free to
>enlighten me.

My own participation in the "online" code test debate dates back to
1991 when I returned from the UK and purchased my first US modem.
I had limited participation in Fidonet from the UK from late '89 to '91,
but at the time, the Ham Radio forum was tightly moderated, and anyone
with a pro-code stance was persona non-grata.

>>Therefore, before you judge me, you must understand where I've been
>>coming from throughout this debate -- that code testing imparts a
>>useful skill on radio amateurs, and increases their overall communications
>>capabilities. Those who don't know the code or use it regularly simply
>>are not qualified to judge those who support code testing requirements.
>
>Ever heard this before: "Judge not, lest ye yourself be judged?"

Yup. However, I'm not "judging" anyone's soul here, just their relative
capabilities as a ham radio operator. That's a judgment I'm qualified to
make. One of the problems our society faces now is the lack of willingness
to be "judgmental." We have been indoctrinated by the liberal, political
elite to be "tolerant" of everyone's deficiencies, even when said
deficiencies are that individual's "choice." So, go ahead and call me
"intolerant" as well, because I'm certainly that!

>I for one would like to see a little less judging and a little more
>mutual respect for our fellow hams.

I see. And I also agree. However, I've spent the last 14 years in this debate reacting to the blatant disrespect shown by the NCTA. Would you care to comment on THEIR behaviour as well?

>At the risk of sounding like a
>broken record (anybody remember those?),

Yes, I do! Fortunately, all my music is now on CD's and cassette. You see, I'm one of those technically-challenged pro-coders!

>it's all radio regardless.

I've never said it was anything else.

>Anyone who has bothered to obtain the license must have some interest
>in radio, or so one might tend to think...so why not view that
>interest as something in common and leave it at that?

I am more than willing to do so. However, when faced with the whining objections of the NCTA, I will respond accordingly. Fair enough?

>believe in killing. 2. It is impossible to pick up a gun, point it at a
>human being, and pull the trigger without the rational expectation that
>you will kill the person you're aiming at. Now, please answer the Q.

1. This happens more often than many people realize. The legal
complexities of the situation are myriad and, as I understand it,
hinges largely on whether or not the intended victim (Mr. Singh) had
legitimate reason to believe that he was about to be shot no matter
what else he did.

2. There are some states in which Mr. Singh could splatter the
robber's brains all over the counter with the reasonable expectation
that a grand jury would refuse to indict him afterward. In Texas, a
guy shot a would-be carjacker to death a few years back, and the grand
jury refused to return an indictment.

Beyond those considerations, there are two differing responses to the
above situation.

The liberal response (common in New York, where I live): "Well, that
isn't enough information to properly answer the question, we need to
discuss the applicable statues where Mr. Singh's business is located,
along with about a hundred other considerations, and we'll get back to
you with an answer in about ten years.

The conservative response (common in Texas, where I believe Kim
lives): BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! (Sound
of magazine being ejected and a fresh one rammed into place, followed
by the sound of the slide racking another round into the chamber)

Mr. Singh: "Did he move or was I seeing things?"

Mr. Singh's 16-year old son: "He moved, dad, I saw him!"

Mrs. Singh: "I think our son is right."

BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM! BLAM!

Mr. Singh's 9-year old daughter: "Nice group, daddy!"

In my case, it was non-ham for 34 years. Then, at age 42, I finally
let someone talk me into getting my no-code Tech license for reasons
that had little to do with actual ham radio activities. A little over
a year later, after the code speed was lowered to 5 WPM, I upgraded to
General, which is where I am now.

>Once I got started, I progressed with code very rapidly, and found myself
>eating a lot of my words about Morse/CW when I got hooked on CW as
>an operational mode.

How does eating those words compare to eating that hypothetical
elephant dung?

I first started trying to learn code when I was in high school.
Problem was I was trying to copy it in my head instead of writing it
down as I copied, and it wasn't until the winter of 2001 that someone
(namely Jim, KC2ALA) found out and corrected my approach, which led to
my pasing Element 1 a few months and a couple of borrowed code
practice tapes later.

>What kind of a ham a
>licensee becomes is a subjective evaluation made by other hams -- preferably
>by those who are, indeed, qualified to make that judgment -- like I am.
>I had this concept drilled into me by my "Elmers" in my early days as
>a ham radio operator, and I strove to meet, and ultimately exceed, all of
>their expectations. Now it is my turn to make the judgments, and I do
>not shirk from that responsibility.

Even the worst of us possesses a document upon which is printed the
words "Amateur Radio License" which makes the person named thereon a
"real ham" as far as FCC is concerned (unless it's our guy from
another thread who spelled his name wrong on the application, in which
case he possesses prime paper-airplane construction materials).
Stating that someone is not a "real ham" based on that person's choice
of operating modes is in my opinion offensive, elistist, and not in
the best interests of the hobby. If the same determination is made on
other considerations - failure to operate his station in accordance
with FCC rules and good amateur practice for example - then I have no

problem with that. I do have a problem with bigotry based on license class or choice of operating modes.

>>2. Any *prospective* US ham who learns the code and gets their Extra

>Not by me, they won't! Please don't go Kim on me, John!

Don't blame me or Kim, OM, you're the one who keeps mentioning the (supposed) dumbing down of the ARS and pointing to the written exams amidst much crying and gnashing of teeth (figuratively, as far as I know anyway). You're not the only one who does it by any means, but you are a frequent flyer on the "dumbed down" claim.

>I don't think that passing ANY current amateur radio test element
>is a particularly challenging endeavor these days. With open question
>pools, VE testing that allows taking the test multiple times per session,
>and a 70% passing score, anyone who can't go into a test session and
>walk out with an Extra just isn't trying.

Sure, if all they're interested in learning is how to pass the exam. I could have my Extra right now if that's the approach I chose to take. I'm still a General because I won't go that route. I'm going to do it by learning the material, or not at all.

>The current technical
>requirements in the written exams are strictly amateur level, as they

>actual participation, which is subject to evaluation by his/her peers.
>I have never made a connection between code or theory testing and
>"technical competence" in the ARS. It is mainly the NCTA doing
>that.

I haven't seen that in this NG. What I have seen is the claim that the code test prevents otherwise qualified individuals from getting any meaningful privileges on HF, which is true. I myself am proof of that. When I took (and passed) Element 1, it was my intention to walk out of that VE session with my CSCE for Element 1 and a year to study for Element 3. The ham coordinating the VE team that morning pointed out that since it was going to cost me $10 that day whether I took the written test or not, I had nothing to lose by taking the written test. I did so, and passed, walking out as a temporary AG instead of as a Tech+ as I had intended. I had not studied at all for the General written, I knew the material from my years as an SWL and scanner listener and TV repair tech. I could have passed that exam the day I got my no-code Tech. The code test alone kept me from having any meaningful HF privileges in the interim.

That code test proved what? Nothing, really. It has nothing to do with my technical proficiency, and CW is but one of many modes we're permitted to use, and one I haven't chosen to pursue thus far (and at this point I'd be starting over almost from scratch if I decided to suddenly operate in that mode).

>You're entitled to your opinion. The problem is, the NCTA's don't think

...sort of like Hands Across America, where three million morons connected New York to Los Angeles and showed the terrorists our first sign of a weakness?

>I may
>as well take that .50AE and use my radio gear for target practice, as far as
>they're concerned! The NCTA are classic liberals, and like all liberals,
>they can "tolerate" anything except a difference of opinion.

Actually, I don't see either side of the argument as being very tolerant of the difference of opinion that obviously exists. Or perhaps there isn't a problem with testing for a useful communications skill, but rather with the selection of CW as the *only* such skill for which one can be tested.

>Another
>thing that characterizes liberals is a lack of a sense of humor, which may
>explain why you apparently missed the tongue-in-cheek nature of my
>"deal."

I happen to be a conservative. Like you, I own guns. Just because I live in a state where the voters were dumb enough to elect Chuck Shumer and Hillary Clinton to the U.S. Senate doesn't mean that I agree with the politics of those two leftist...well, let's just say I haven't forgotten who wrote the Brady Bill when he was in the House, okay? And I'd just as soon Hillary pack up Bill and his cigars and move back to Arkansas where they belong. Like all conservatives, I favor a minimum of governmental interference in people's lives. And despite some people's assertions to the contrary, this is still a hobby, which means that while the natural resource that the RF spectrum represents needs to be protected against misuse, the code test leaves the same bad taste in my mouth as the waiting period for me to buy another gun to go with the ones I already have - which is to say, it strikes me as silly.

If indeed your "deal" was posted tongue-in-cheek, my failure to detect this was not due to any lack of a sense of humor, but rather to having gotten used to your militant pro-codetest stance to the point where I

took your comments at face value.

Let's return to the original quote, shall we?

>I'll provide them some incentive: As of now, 20 July 2003 at 0321 hrs UTC,
>any prospective US ham who learns the code at the gruelling speed of 5
>WPM, passes the test, and gets their Extra will be considered by me to
>be a full-fledged ham as long as they regularly use at least one non-voice
>mode on-the-air at least 40 percent of their total operating time.

This implies that if one does *not* regularly use at least one non-voice mode on-the-air at least 40 percent of their total operating time, they will *not* be considered by you to be a full-fledged ham. The problem I have with that is that I operate almost exclusively from a mobile station, which makes operating non-voice modes 40% of the time a difficult percentage to obtain without either using CW (which I still suspect is your real agenda) or running the risk of getting killed in a car accident while typing away on PSK31 or some other soundcard mode while driving my van - or both, for that matter, since trying to drive and send Morse would distract me just as much.

I could of course leave my 2m rig on while I'm at work for 8-9 hours a day beaconing its position on APRS, or set up a 100mW CW beacon or a PBBS, thus adding time to my non-voice activities while I'm away from my equipment and artificially skewing the percentage, but it just seems to me that in order to be a full-fledged ham, one's choice of preferred operating modes must agree with yours 40% of the time, and so somehow I doubt that you'd consider this valid.

So the question I have for you is this: Do you have any qualifications for attaining this mythical, tongue-in-cheek K3LT Certificate Of Full-Fledged Hamdom that are not related to one's choice of operating modes? Something related to technical proficiency perhaps, or something that recognizes other contributions to the ARS such as participation in public service and/or emergency communications, or being active in the local ham radio club(s), or maybe holding an appointment in the ARRL Field Organization from one's SM? Or is it really all about operating mode to you, regardless of what else one chooses to do in the hobby?

My statement applies equally to both sides of the code testing debate. You don't see me referring to CW enthusiasts as, for example, "old fossils waiting to upgrade to silent keys" as I recall one moron posting a few years back in this NG, do you? No, you don't, because I respect my fellow hams, regardless of what modes they do and don't choose to operate in...at least until they present some other reason why I shouldn't - like for example, throwing 150 watts at a repeater that's located ten miles away and at 2300 feet of elevation, as someone not all that far from here regularly did a few years ago.

Meaning their objections to the code test, I presume...and again, I'd prefer to see both sides of that debate tone it down a little...a lot, in fact. The matter has been decided already at the international level, and I don't think any of us doubts that it will soon be decided at the national level here in the US as well. Meanwhile, the ARS has other fish to fry.

But you need CW skills in order to feel superior, at least Larry thinks so.

Watched an interesting program while ago on tlc or discovery about
electrocutions, power line workers in special helicopter were checking
lines
for bad insulators/leaks and were working on one section when the linesman
got electrocuted. Even with all safety equipment in use, he was knocked
out,
lost several teeth but survived.

Even with the power off these hv lines, there is some level of residual
power there
perhaps from static, the program did not get into details.

I would like to see how those cell antenna are installed on top of these
power towers.
Guess they use special crane to do it.

It would seem that the use of repeaters on the HV lines would require the
power line to be broken into isolated sections (RF-wise) where the repeaters
are located, with the 60Hz bypassed around the repeater. This can't be good
for reliable electric service.

if they are not properly grounded they can build up a static charge just
from wind or passing clouds(thunderstorms or clouds that are building a
charge separation even though they haven't actually caused lightning yet).
they can also get charged by induced voltages from nearby energized lines,
where the line you are working on runs parallel to another energized line it
acts like a huge one turn transformer and if not grounded it can build up
quite a high voltage.

>
> I would like to see how those cell antenna are installed on top of these
> power towers.
> Guess they use special crane to do it.

crane, helicopter, carry it up on your back, whatever it takes they get them
up there... providing grounding and isolation at the base of the tower is
the bigger problem. the control shack they connect to requires both AC
power and usually a connection to a land based phone network. both of these
need extra protection because if the hv line flashes over an insulator due
to a fault or lightning the voltage at the base of the structure can get
quite high, this can flash back over to the low voltage line and phone lines
and get back into those systems. phone lines are easiest to protect by
using fiber optics but power is another problem. One utility engineer i
talked to at a lightning protection meeting described how a fault like that
got into the distribution lines and blew the service drops off several
houses down the road causing all sorts of collateral damage.

The power companies have already been using power line carrier repeaters
for many, many years. The repeaters are the bypass, not vice versa.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

John:

ROFLMFAOAPMGO! Really, (well, except for the PMGO, bit!). As far as I'm
concerned, Texas is one of the few states that truly has it "right" where gun
laws and a citizen's right to defend himself is concerned. And unlike here in
Delaware, I'm sure all the Mr. Singh's and Mr. Said's running the conveneince
stores generally don't worry about what's going to happen the next time a
lone customer walks through the door at 11 PM. That's because all the
Texas "perps" know that if they do try to knock the place over for a few bucks
to buy some cocaine, they'll have to wade through a quagmire of 115 gr.
9mm GDHP's flying at them at 1400 fps to get at their intended target!

BTW, If I were the owner of a convenience store, I'd have a special door
chime that played a .WAV of a 12-ga. pump-action shotgun being racked
every time someone came in after sundown.

That's very commendable, Dave. When I said we ALL make "mistakes," I
certainly did not mean to limit it to just radio related violations. Yes, I
have violated FCC rules in my youth and I'm mature enough to admit my past
mistakes and grateful that I suffered no severe consequences as a result. I
personally know not a single soul who has made NO mistakes in their youth,

moral, legal, or both. If you fall in this category, then you've broken that streak and, once again, are to be commended.

The important thing (To me, at least.) is that I AM wiser for the wear and am in a position to help someone else avoid those mistakes entirely based upon my experiences. BTW, one does not necessarily have to agree with a law/rule while obeying it. For ex.

- I would never bootleg or run excessive power because it is wrong and causes harm.

- I would never work DX on the legal 40 CB frequencies with 12 Watts P.E.P. because it's not worth risking my ticket over. (But I think it'd be a great recruitment tool.)

It's a good thing we really don't go blind for doing some of the "wrong" things of our youth. With the amount of DX I worked on ch. 38 LSB on my Royce rig in '78/79, I'd be typing this post on a Braille keyboard. Take care now, OM. ;-)

> > Remember TITANIC had sunk because CW
> > was used. If SSB was used, the ship
> > has been saved.

Yes, it's an obvious troll. However, the sinking was a direct result of multiple human errors rather than any technological breakdown. Other radio modes would not have made a difference. For radio to be any good somebody has to turn it on, and do something with the information received.

The Marconi ops delivered at least six ice warnings to Captain Smith but he did not order a reduction in speed or change of course. Although it was a moonless calm night, the lookouts did not have binoculars. Etc. The list goes on and on.

Sister ships Olympic and Britannic were modified after the Titanic loss, but Britannic was lost after striking a mine in the Med while serving as a hospital ship. Olympic ("Old Reliable" to her crew) served 25 years, including WW1 service as a troop ship, and wound up being scrapped.

The Titanic disaster serves as an object lesson of how even the best available technology cannot prevent all possible disasters due to human error. IOW, there's no cure for stupid.

Now there's something to be proud of.

Instead of sending worse code, why not try sending better code so that
the reader can copy it?

I guess we can count on you to go the wrong way whenever there's a
tuff decision to be made.

Except for dung beetles! There was a good Nova program on them. Glad I
didn't have to do the camera work.

Again, Kim did not indicate that her actions were something done in her
youth. I wrote about radio violations because that was what was under
discussion. If I wanted to generalize, I'd take it up in
rec.soc.scofflaw.

> The important thing (To me, at least.) is that I AM wiser for the wear and

I've never put forth the idea that one should obey a law because one
agrees with it. Kim knew she was breaking the law and decided that
she'd do it anyway.

> It's a good thing we really don't go blind for doing some of the "wrong"

So you knew you were breaking the law but decided it was okay? Was that all in your youth?

Its not a problem for a couple of decades anyway. As soon as the 'flood' of
no code braindeads show up on phone...CW will be so full you can't get a
beep in.

Not a problem...let all the no code braindeads have phone. I'll just run cw
on top of them with my narrow filter.

That's a specious argument and you know it.

You do have to actually eat an apple to determine if you will like it. It's
not possible to determine what a cake or whatever will taste like by reading
the ingredients of the mix. You have to eat it. For example, I hate
tomatoes, cheeses, and garlic. Yet I could not predetermine what pizza
tasted like. I had to try it. And you know what, I love pizza.

> Note that it is not my intention to equate CW skills with animal dung,

Yes it was and yes you do or you would not have used the dung comparison.

CW skills are more like music. You have to acquire a BASIC level of skill to determine if you will like it. Almost every adult that I know wishes they had learned to play an instrument and wishes their parents had made them take lessons.

There is a new article as of today on the ARRL site that also predicts about two years. They also are of the opinion that the FCC will take no action on its own but will only respond to petitions for changes. If that's indeed the case, then someone has to file a petition, then there has to be time for comments and related petitions, then the FCC needs to review it all and file a NPRM and allow time for comments on that and so on.

Kim,

Just out of curiosity, have you noticed any significant change in the amateur newsgroups in the last two years? This is getting almost (but not quite) as bad as rec.radio.amateur.misc :)

Some of the folks in here don't appear to be dealing with a full deck.

I doubt CW will be outlawed. As it stands, CW is legal just about anywhere (and I've used that to *very* good advantage when someone tried to QRM me). Just drop in the 250 Hz bandpass filter on the rig, run it through DSP, and let the SSB, AM, FM, RTTY, and anyone else try and get through it :)

I remember well when I got W2OY's blood pressure to rise (likely over 200). I had to stop and open up the bandwidth to hear him whining after he tried to jam a QSO between me and a Pennsylvania station. His kilowatt didn't fare very well against our 75/100 watts. Joy joy joy! Say what you want, most folks are very dependent upon their computers and *still* can't type worth beans :)

NC State University here in Raleigh has wired the entire residential campus,
RESNET, along
with the entire campus. A story in the paper reported that they ran enough
cable, including optical,
to go from Raleigh to Florida and back !

I think this bpl is a ploy to trash the bands so they can sell them off to
highest bidders
once the tv stations move to digital and leave the hf bands.

Yeah, I always like how your job description ends up sounding like a
defense...LOL

No, I don't have a college degree, Larry. I didn't have the money to waste.
I also didn't have the time to waste. I wanted to do too many things, so I
set out to do them. And, I've accomplished most of them.

With or without that college degree I now earn quite a healthy living, with
a lot more room to grow. So, you wasted your time, in my opinion, and I did
not, in my opinion.

If you think about it, it is logical. There is no particular effect on the FCC one way or the other wheether there is a code test or not. VE's are doing the examinations, and as far as I know, the test doesn't make for any extra work at all for the FCC. So they probably don't care very much when it happens.

Oh goodness! Actually, I was "off" for a while. I ran completely out of
time to get back here to the office to do any "newsgrouping." But, I'm
building a database and program right now, so I'm on the computer and in the
office nearly every night...and will be for a while! Larry would have to be
having an impact for me to desire leaving because of him; anyone else for
that matter. I have a honed skill, that took a long time and a terrible
first marriage to perfect: I can completely turn off to someone I deem
unworthy of my time and/or emotion. Larry is one of those people. Dick
Carroll is another. There's a few others...

Oh, goodness! There's no one even remotely close to Larry's demeanor--at
work or otherwise--in my life. Good grief, that would be like going to
Hell, wouldn't it? Naw, what I meant is that I just approach this newsgroup
with no expectations and much like a good round of any computer or video
shoot 'em up game! :)

I am hoping that more and more realization will come to be, that amateur radio--all radio services really--have a great potential for our served agencies!

>

> assessment on the power grid in addition to our normal duties.
>

I haven't been involved in any amateur radio for about a year now. In fact, my usual entourage of radio equipment is in the shed, not in the truck. I had to have some work done on my truck, which meant I had to take out my Comm Shelf (custom built by my darlin' hubby) and then sick, then surgery, then recovery, one thing after another. I haven't had the gumption to get it all back in there.

>
> On the other hand, I'm also a member of the county ARES/RACES in the

>

I had the pleasure to be a part of the ARRL ARECC Courses, both as student and mentor. I was also, for a very short time, Hunt County ARES EC here in Texas. Plus lots of other dabbling in groups here and there. Leadership is not as cool as just plain getting out there and doing it! I'll still go out after a storm--regardless of radio equipment--and chase it around for a while.

[SNIP]

The past couple of years have been challenging, if you've seen the news.
However, prior years saw a lot of "good" (it's always difficult to call bad
weather good) activity, in terms of severe storms, up in OK and Kansas, off
"thataway."

There is no broadcast television in the HF bands. Channel 2 is 54-60 MHz,
low VHF... but that part of the band (up through channel 5) is also within
the scope of BPL frequencies..

2405. Re: Two years?

Newsgroup: rec.radio.amateur.policy

Watch this, John:

>
John, you said:
>
> >2. Any *prospective* US ham who learns the code and gets their Extra
> >(as opposed to getting their General) will be villified and condemned
> >by you, as well as others in this NG, as a product of the (supposedly)
> >dumbed down written exams, even if they operate CW 100% of their total
> >operating time, and
>

Then, Larry said:

>
> Not by me, they won't! Please don't go Kim on me, John!
>
Then you made a couple of points and Larry said:
>
> . . .In any
> event, I don't think that passing ANY current amateur radio test element
> is a particularly challenging endeavor these days. With open question
> pools, VE testing that allows taking the test multiple times per session,
> and a 70% passing score, anyone who can't go into a test session and
> walk out with an Extra just isn't trying.
>

Ummmm, if that's not an inference to "dumbed down" then what is?

Then, Larry goes on even more to say:

>
> The current technical
> requirements in the written exams are strictly amateur level, as they
> should be, and prove little about a prospective ham's technical
> competence. This he will have to prove to his/her fellow hams by
> actual participation, which is subject to evaluation by his/her peers.
>

And, if you ain't on board with Larry's way of operating, then you ain't
Larry. And, if you ain't Larry, well, then...

And, here's the clincher from Larry:
>
> You're entitled to your opinion. The problem is, the NCTA's don't think
> I'm entitled to mine! If I don't follow the rest of the flock of
lemmings,

> put on my tie-dyed tee shirt, faded jeans and Birkenstock sandals, and
> hold hands with them and sing "Kumbuya" as they chant their liberal,

> So you knew you were breaking the law but decided it was okay?

Absolutely. Well, maybe not in the beginning...but I carried on with
my wicked ways for at least two years. BTW, I later learned that I had
violated Part 15 even earlier by swapping the fixed telesoping antenna
on my 100mW h/t for a coax fed 1/2-wave dipole. I was all of thirteen.
Dad helped me with the soldering and getting it up in the trees. When
I found out (About three years ago.) that it was a violation of FCC
rules, I joked with dad that it made him a "dirty cop," since he had
aided and abetted. (Correct spelling?)

> Was that
> all in your youth?

Very much, and quite fun too...but most of us grew up to be just fine.
Some even became pretty good hams as well as citizens. I do still
occassionally jay walk though. ;-)

Not just in our youth, Bert, either. But, apparently, Dave has never, in any way, broken the law. Not even for speeding. Of course, he'll probably respond that he's never gotten a ticket. Neither have I.

I dunno.

Kevorkian is only one man, and there are a lot of stupid ones out there.

Actuarial Tables are painfully slow.

Large meteor impacts are few and far between.

I think we're stuck with no cure.

Those are the individuals who make civilization work. Right, then.
We'll put you down for anarchy.

> So, you've never, ever broken the speed limit, eh?

Not deliberately, Kim. In my three years back in the U.S., I've logged over 100,000 miles on the highways. I've not even been stopped for a warning. On the interstate highways I set my cruise control for the speed limit and let those who are in a hurry blow by.
But all of this is just a diversionary attempt on your part.
How about addressing the point of whether you believe that you can pick and choose which laws to obey?

With the privilege of being able to modify goes the responsibility to follow the rules. That guy demonstrated that he could not follow the rules, therefore, he lost the privilege.

Now if a law-abiding ham gets into trouble with the FCC for modification, that's a different story. I don't know of any law-abiding ham who has gotten into trouble for modifications. Do you?

But this dude isn't law abiding. Got his license two weeks and he's sending phony distress calls on a marine freq.
>
>"Modified radios don't break the rules, people do."

Mike:

Oh, you mean like "disconnecting" antenna rotor control boxes with a
pair of dikes? Yes, indeed. 12 hours to set up, 2 to tear down!
Fortunately, I'm not that hard on my own equipment, just a bit
unmotivated to get the station set back up for at least a month after
Field Day. Since I run the digital mode station for my club, I have
to take not only my radios, but my whole bloody computer system
as well. Fortunately, that's the easiest thing to return to functional
normalcy at the home QTH. Can't be missing out on rrap now, can I?

>Just curious,

Ryan:

That would depend on whether or not he/she was whining about the
code test requirements, or gloating over the fact that they had been
dropped. If he/she were, in actual fact, doing the technical R&D you're
talking about, then I would have a very high opinion of their contribution
to amateur radio -- notwithstanding the yakking.

>Uh huh. That's why you spent so much time, eh?

Typically unresponsive answer, Kim. You're out of your depth here, to a degree
which would be quite embarrassing to anyone with the emotional and
intellectual maturity to understand the concept. Your responses on virtually
any

topic at hand are uniformly childlike and devoid of any evidence of well-reasoned
logic. For the most part, you simply parrot or show approval for things other people say -- as if that contributed something of value to the discussion, which
it does not. Participation in this newsgroup is way over your head, Kim -- which isn't saying much about you!

I now await one of your typically asinine replies.

Kim:

Sooo, you don't believe in killing to defend your own life, or the life of a
third party? You don't believe people have the right to defend their own lives

with deadly force? If some terrorist wacko started shooting innocent
people in a subway station, you wouldn't want a police officer to shoot
him to protect innocent lives?

I don't believe in killing either, Kim. Killing is not something that any
decent, law-abiding, morally conscious person would want to do.
However, if faced with a life-or-death situation, I would not hesitate to
respond with deadly force in order to protect my own life or the lives
of others. That is a very important distinction. If you honestly believe
that nobody has a legitimate right to defend life with deadly force, should
the need arise, then you are obviously not looking at this subject from
a rational point of view. I hope that you are never personally faced with
that situation.

Darn near! No one is trying to abuse the equipment, but after a weekend of hard labor setting the stations up and no sleep we can get goofy and mess a few things up.

Wouldn't trade it for anything tho'. Work hard, play hard.

> Fortunately, I'm not that hard on my own equipment, just a bit

Yup, me too. Interesting thing with the digital modes besides CW. I "snuck" in my interface over the objections of some members. The new people loved it! Kids, who are used to chat rooms, picked up on that quickly, and the GOTA station will have PSK31 available from now on.

I think things like that only help the case for CW. The newbies were looking at that paddle on the bench, and you could see the gears turning....

Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.shortwave

It would be very difficult to achieve sufficient input to output
isolation to repeat on frequency so either do time division (lots of
latency) or translate to another band (most likely).

Guess these repeater units would be very vulnerable to any non
linearity that causes I.M. or harmonics from the output to occur at
the input frequency.

The more I think about this, the more convinced that the BPL lobbyists
have excellent P.R. and are first division bull shit merchants but are
totally and utterly clueless when it comes to R.F.

Expect a few systems to be deployed before the money folks from Wall
Street realize that BPL won't work. Trouble is that a few badly
maintained systems could trash the whole of H.F. during the next
sunspot maximum. Reminds me of the pager transmitter on the next hill
to me, wakes up once to twice a day and overloads my 2M equipment.

20% renewals is a reasonable estimate.

> > Even if 20% are renewed Tech+ then
> > that's still over 200,000 hams with no Morse/CW experience.

Actually, that's not strictly true. We don't know how many of those
~200,000 have experience with code. An unknown number have the Element
1 CSCE, but haven't passed General theory yet. Others are studying but
haven't passed the code test - yet.

> > >It is also a fact that because of their

> > >about the subject.
> >
> > I disagree - it's not a fact, it's your opinion. I also happen to
> > disagree with that opinion.

Anyone can have an opinion about anything. Whether that opinion is
based on reasonable evidence and logic or not is another matter. For
example, a person who says that Sealtest vanilla bean ice cream is the
best ice cream in the world but has only tried a few other types of
ice cream isn't basing that opinion on reasonable evidence and logic.

> > order to form that opinion.

Bad analogy. Here's why:

You would be hard pressed to find a rational person, at any time or in
any culture, who finds that activity anything other than disgusting.
Also, taste and smell are closely related, and it's very rare that
something will smell bad but taste good.

> > Similarly, one does not need to have
> > learned to send and receive CW at 50 WPM in order to decide that one
> > is not interested in that particular mode.

Not similarly. But the rest of the statement is quite reasonable. It's
like saying "I tried sushi a few times and I just don't like them. I
know others do, but not me. You go ahead, I'll have a cheeseburger."
(There's actually a song by Pat Donahue about this).
>
> That's a specious argument and you know it.

Smell can be an indicator, too. And it's possible to use all the right
ingredients and yet bake a terrible cake.

> For example, I hate
> tomatoes, cheeses, and garlic.

But you tried those things before you decided you hated them, right?

Which boils down to "I don't think I will like that".
>
> CW skills are more like music. You have to acquire a BASIC level of skill

I wish I'd had the opportunity, anyway.

Simple question: Have you ever thought you wouldn't like something,
tried it anyway, and decided you really liked it? Example: ever get
dragged to a movie you thought you wouldn't like and wound up liking
it so much that you bought the tape/DVD?

> example, how much Morse operation is "regular"?

It's only flawed for the purposes you're trying to put it to. Its original
purpose was to gauge the level of interest based on use of Morse. For that

purpose, it doesn't matter whether the respondent's use of Morse fits your definition of "regularly" -- or mine -- it matters only whether it fits the respondent's definition.

Most of the cavilling about survey questions comes from misunderstanding the question's purpose and misuse of the results to try to "prove" things that the survey wasn't addressing. If you want to sample opinion on a topic, hire a reputable research firm to formulate and conduct a survey that will elicit the facts you want. Trying to hammer an existing survey into something that it wasn't designed to be is almost certain to lead to skewed conclusions.

> Note that the question doesn't specify HF operation, or ask if the ham

>
> Wrong again!
>
> 64% (37+27) sometimes use Morse code, according to that survey. That's a
> fact, not spin.

But as you point out, nobody really knows what "operate" means in this case. For example, if a person's entire use of Morse code is to copy repeater IDs, which they do by laboriously copying down the dots and dashes and then looking up the letters in a table, is that "operation" of Morse? The survey doesn't say.

>>So if it came to a vote you'd have a hard time keeping things as they

>
> Maybe.
>
> Try this "survey": Actually listen to the CW/digital subbands and see
> how much activity there really is. Try 40 meters below 7050 some
> evening.

That's a much better way to get a feel for the true level of interest. Signals on the air are a much better measure of what's popular in ham radio than any survey results or any amount of Usenet bloviating.

Jon

Godwin's Law still holds.

Try this: The jury in the Scopes monkey trial was convinced of the
"error" of the theory of evolution and the "guilt" of the teacher
involved. Blinded by zeal, etc., see classic film "Inherit The Wind".

See also the refusal of various cardinals and other birds to look
through Galileo's telescope.

> Larry is wrong, but is blinded by zeal and therefore

> communications hobby, and any technical skill is useful in a technical
> hobby. For me to claim otherwise would be illogical.

There are those on the nocodetest side of the fence who take the
illogical stand that Morse/CW is not useful, outdated, etc.

The operative question is how much something has to be useful in order
to qualify to be tested.

> What I am
> disputing is the notion put forth by K3LT that one needs to have
> acquired CW proficiency in order to form an opinion as to whether one
> wishes to pursue that aspect of the hobby or not...an assertion which
> I find equally illogical.

Perhaps the confusion arises because there's a difference between
judging something's usefulness and judging whether someone wants to
use it. A Harley Davidson motorcycle is certainly useful and desirable
(IMHO) but at this time in my life I am not going to pursue having
one.

> >> Actually, all that's really required is a receiver.

>
> ...where conditions are apparently better since they support phone on
> that band? Then why haven't the CW guys moved there as well, to take
> advantage of the better band conditions?

Because the type of operation desired is different. Example: Suppose
there's a 'phone DX contest going on, it's the bottom of the susnspot
cycle, and the bands above 15 MHz are open. Most of the hams in the
contest are going to be on 15 and 10 meters trying to gather as many
countries and QSOs on those bands while they are usable. The
distribution of hams using 'phone will be heavily concentrated in
those bands.

Meanwhile, hams who are working CW (and obviously not interested in
the contest) will be distributed differently among the bands. Since
much of the DX is working 'phone, the CW ops will probably be looking

for ragchews, and may be on bands like 40 and 80, which are more
suited for non-DX when the upper bands are open.

Consider also that not all contests involve the WARC bands, further
shifting things.

> After all, they have the
> bottom part of that band to themselves too...

CW ops do not have the bottom part of ANY HF band to themselves. We
have to deal with digital ops and an ever-increasing number of foreign
'phones.

Good example! Which 'fest, btw? Biggest I've ever been to is
Rochester.

However, your example could be used to back up the claim that someone
without CW skill can't really know its capability. You know the route
but can't explain it to someone who wants to know. Larry knows the
capability but can't expalin it to someone who doesn't want to know.

Not in Ohio. Since the trucks have to go 10mph slower than auto
traffic it jams up the whole works. I'm suprised DOT doesn't withhold
some federal money until they reconcile the speed limit laws as a
safety issue.

Well, radiowise, I'd have to say my errors are pretty much confined to my "young and selfish" youth. I still cruise with the pack at 60/65 m.p.h. though and I sure do jay walk occassionally. What can I say? Lock me up and throw away the key. (hihi)

I'm sure Dave is a fine person, just as I'm certain about you. Anybody with a gorgeous antenna farm like that is a-ok with me. Besides, this is USENET and if you take any of this stuff seriously, you'll just drive yourself nuts. Like I said, the important thing is to learn from your mistakes and possibly help others avoid the same. Jim, N2EY, made a very good comment about why folks that follow the rules are granted "privileges," and those who send false distress signals and such are not. Not to worry though, that's why there are "statute of limitations." (hihi) Take care. :-)

If you are selling or buying anything beware of swiftpay services. The seller or buyer will tell you to go there to provide credit card or bank information. It turns out that this domain is either a scam or it's database has now been compromised.
Their appears to be hundreds of false charges on credit cards and the federal and state government(s) is now investigating. The original swiftpay company is located in Europe.

Not in Ohio what?

> Since the trucks have to go 10mph slower than auto
> traffic it jams up the whole works.

I do a lot of my driving in Ohio. Except for steep uphill grades, many
of those blowing by me are truckers.

> I'm suprised DOT doesn't withhold
> some federal money until they reconcile the speed limit laws as a
> safety issue.

A bigger problem is the lack of enforcement of existing speed laws by
the states, though Ohio and Pennsylvania seem to do a better job than
most. These diversions aside, what's your honest opinion of Kim's
admission to deliberately taking to the airwaves as a bootlegger.
You're often the individual who writes of a double standard here. Are
you operating under one of your own?

http://nytimes.com/
House Votes, 400-21, to Block Media Rule by the F.C.C.
By THE ASSOCIATED PRESS 4:10 PM ET
The House voted today to support the reversal of a rule that permits the nation's biggest TV networks to grow larger.

Well it looks like the new FCC Media rule is being stopped. Does any one think we can stop the increase of power in BPL applications with this Powell character still in charge?
I don't think the moron even understands what the hell the radio spectrum is.

2447. Re: The myth that BPL is a solution for rural broadband

It's very simple - BPL is NOT for rural areas. If you were trying to make a buck with this new technology would you deploy it out in the rural areas, or right on every street in America? Right on every street there are dozens of the real customers, with bucks ready to spend - the AOL dial-up users !!! Every single one of the 25 million AOL customers is ripe for BPL.
So if the FCC is serious the solution is simple - make rules so it can only be deployed out in the rural areas, and you will see BPL disappear faster than your money at a craps table.
I wish I had thought of this before I made my comments to the FCC.

I disagree, Jon. Too much is left to the respondent's interpretation.

A person can have a 'high level of interest' in Morse, yet rarely or never operate, because of inactivity, equipment failure, etc. IOW a ham who rarely or never operates at all must, by definition, rarely or never operate Morse. A sizable percentage of those responding to the survey were completely inactive on ANY mode, so they probably answered the question "never".

And that's just one problem.

Does once a year count as "regularly"? Does one day a month CW and all the rest 'phone constitute "rarely"?
>
> Most of the cavilling about survey questions comes from misunderstanding
> the question's purpose and misuse of the results to try to "prove" things
> that the survey wasn't addressing.

As I understand it, the survey was trying to determine what position ARRL should take WRT code testing at a WRC in the late 1990s (1997, I think). So why do the questions beat about the bush so much? Why notjust ask those surveyed what they think FCC should do, and how much they operate CW?

> If you want to sample opinion on a
> topic, hire a reputable research firm to formulate and conduct a survey
> that will elicit the facts you want. Trying to hammer an existing survey
> into something that it wasn't designed to be is almost certain to lead to
> skewed conclusions.

I'm making two points in that post:

1) The person who cited the survey had a lot of the facts wrong (the survey was not just to hams who passed a code test, 35%, not 66%, answered "never", etc.)

2) The survey left itself wide open to all sorts of interpretations because it was not well designed. The fact that the League payed a professional does not mean they got a good survey.

Heck, the sample wasn't even representative of the distribution by license class in the ARS at that time. ~174,000 Techs and only ~75,000 Extras, yet both groups got 200 samples. But the ~66,000 Novices only got 100.

Sure they do. It means to have QSOs using the mode.

How many hams do you know do that? I don't know any. I do know lots of
hams who have 2-way QSOs on the amateur HF bands using CW, though.

Then why was that question in the 1996 survey?

If you listen to the HF/MF amateur bands, Morse/CW is second in
popularity only to SSB.

I strongly suggest that a well-constructed survey/poll of the entire
ARRL membership be conducted, and the results published in QST. Web
polls and small samples are not necessarily indicative of the views of
the membership. The last time such a survey was conducted was 1975. I
know, I responded to it. The questions were extensive and the results
published in QST. Why can't this be done today? Make it a tear-out
sheet in QST and have everyone enter their member number to avoid
dupes.

Whatever position ARRL takes on this issue will be very unpopular with
a large number of members and nonmembers alike, so it is important to
be able to back up that position with solid data. A valid survey of
the entire membership, backing up the ARRL position, can only serve to
improve ARRL's credibility with both the amateur community and FCC,

and increase support for the position chosen ï¿½ whatever it may be. Who could fault ARRL for going with the majority opinion of its entire membership?

Too many amateurs, ARRL members or not, think that decisions are made in "ivory tower isolation", and that their views are not considered adequately when ARRL formulates a position. While such a survey will not be free, it will be money well spent if the membership and amateur radio community perceives that ARRL is truly responding to member opinion and input.

In fact, it may be advisable to survey every radio amateur in the US. Such a survey might change the way the ARRL is viewed by nonmembers on both sides of the issue.

Here are some suggested questions for the survey:

Answers for questions 1-11: SA = Strongly Agree, A = Agree, N = Neutral/No Opinion, D = Disagree, SD = Strongly Disagree

1. All Morse Code testing for a US amateur license should be eliminated as soon as possible.

2. Morse Code testing for US amateur licenses should be retained as it is today.

3. Morse Code testing for US amateur licenses should be reduced in some way but not totally eliminated.

4. Amateur radio tests in the USA for license classes above entry-level should have the option of a Morse Code test or an additional written test on other modes.

5. There should continue to be separate subbands on the HF amateur bands reserved for Morse Code and digital signals only

6. Separate subbands on the HF amateur bands reserved for Morse Code signals only should be created.

7. Separate subbands on the HF amateur bands reserved for Morse Code signals only should be created if the code test is eliminated.

8. Subbands by mode on the HF amateur bands should be eliminated.

9. Any further reduction, or elimination, of Morse code testing in the USA should be accompanied by more comprehensive written testing.

10. If the code test is eliminated, there should be other changes to the privileges granted to the entry-level license classes (Novice, Technician, Technician Plus)

11. The code test issue should be dealt with as a single issue and not connected to other changes.

12. Of my current amateur operation, I use Morse code:
A - Never
B - 0 to 25% of the time
C ï¿½ 26 to 50% of the time
D ï¿½ 51 to 75% of the time
E ï¿½ 75 to 100% of the time
F - I am currently inactive

13. Of my current amateur HF/MF operation, I use Morse code:
A - Never
B - 0 to 25% of the time
C ï¿½ 26 to 50% of the time
D ï¿½ 51 to 75% of the time
E ï¿½ 75 to 100% of the time
F - I am currently inactive on HF/MF

14. The ARRL leadership should take the following role in the code
test issue:
A ï¿½ Actively seek to eliminate the code test issue
B ï¿½ Actively seek to preserve code testing
C ï¿½ Wait for FCC to take the first step, then respond
D ï¿½ Take a neutral stand

14. The ARRL leadership should form its position on code testing:
A ï¿½ Based primarily or exclusively on this survey
B ï¿½ Based partly on this survey
C ï¿½ Based on what the leadership thinks is best regardless the
survey
D ï¿½ No position should be taken by ARRL

That will all fit on one side of one sheet of paper. Return address on
the back. Fold it over, put a stamp on and send it in. Why not?

Ah but "imaginary" numbers are used to describe things that do exist (phase phenomena and such I believe). Since imaginary numbers describe real events, therefore "imaginary" numbers do exist and are thus real. In this case, "imaginary" is a misnomer.

I've known a few over the years. I guess these days most repeaters have
voice ID, though.

> I don't know any. I do know lots of
> hams who have 2-way QSOs on the amateur HF bands using CW, though.

Maybe a better example: If you just listen around the band are you
"operating?" I bet you would get less than complete consensus on that one.
If you listen a lot but rarely transmit, are you operating "regularly" or
"rarely"?

>> >>So if it came to a vote you'd have a hard time keeping things as they

>> radio than any survey results or any amount of Usenet bloviating.
>
> Then why was that question in the 1996 survey?

I believe it was intended to provide background to the answers to the
other questions in the survey. Much of the usefulness of surveys comes
from crosstabbing of the results. The purpose of this survey was to sample
opinions on Morse testing, not to nail down the percentages of operating
time by mode. For the purposes of the survey, a simple indication of
activity, as gauged by the member's own characterization, was sufficient.
More would have been overkill and thus would have unneccesarily
complicated the survey, leading to lower response rates -- to no good

purpose.

> If you listen to the HF/MF amateur bands, Morse/CW is second in
> popularity only to SSB.

So if we already know that, what's the point of surveying -- to learn
something that we already know?

> I strongly suggest that a well-constructed survey/poll of the entire

I have no idea whether that will happen -- it wouldn't if it were up to
me. I'd consider it a monumental waste of resources.

> Whatever position ARRL takes on this issue will be very unpopular with a

All of those who disagree with the result, of course!

> Too many amateurs, ARRL members or not, think that decisions are made in
> "ivory tower isolation", and that their views are not considered
> adequately when ARRL formulates a position.

Polls won't change that. Those who dislike the result will just claim the
poll questions were no good. (Oops!)

> While such a survey will
> not be free, it will be money well spent if the membership and amateur
> radio community perceives that ARRL is truly responding to member
> opinion and input.

There's a difference between taking people's views into account and taking
a direct vote. It's the difference between representative democracy and
direct democracy. (Say, were you a Perot voter by any chance?)

I don't quite understand why you think an all-inclusive vote should be
taken when you don't even think the voters are smart enough to decide
whether they operate CW "regularly" or "rarely"!

On the other hand, if you are willing to spend the money to do the polling, please let us all know what results you get. If nothing else, it'll make good fodder for rrap.

> In fact, it may be advisable to survey every radio amateur in the US.
> Such a survey might change the way the ARRL is viewed by nonmembers on
> both sides of the issue.

People's minds are well made up on this issue, and nothing anyone does is going to change that. Those who support Morse testing will be angry with the ARRL if it comes out for elimination of the test no matter how that decision was made. Those who favor elimination will be equally angry if the ARRL supports continuation of testing. And those of us who think far too much energy has already been wasted on this subject will groan yet again if ARRL spends any more substantial resources on it.

> Here are some suggested questions for the survey:
[snip]
> That will all fit on one side of one sheet of paper. Return address on
> the back. Fold it over, put a stamp on and send it in.

And then we hire the mail crew to open and the data-entry crew to enter the responses from a half million 14-question survey responses. This is your idea of money well spent?

> Why not?

In my opinion, because it's a waste of resources -- time and money -- that would be better devoted to tackling the problems Amateur Radio faces that are important -- a list that does not, in my mind, include anything to do with Morse testing.

No, I'm saying the survey measures the respondents opinions of their own
levels of activity. What that means in objective terms is something on
which you're free to speculate, although I can't imagine what useful
result would obtain from such speculations.

I don't think so. Every time I turn on a broadcast band radio, I hear
what passes for music nowadays - often being performed by "musicians"
who sound as if they never bothered to acquire a basic level of skill
in much of anything related to music - while at the same time there
are countless people the world over who enjoy listening to music, even
though many of them couldn't carry a tune in a bushel basket to save
their necks.

>Almost every adult that I know wishes

John Taylor, K1RFD, created it. Its use is limited to licensed radio
amateurs only. You can download it, entirely for free, at the
following website:

http://www.echolink.org

Echolink uses voice-over-IP. You can use your computer and Internet
connection to get a repeater anywhere in the world if that repeater is
linked in via the Internet. Ham stations, including repeaters in
different parts of the world can be linked via Echolink as well. As an
example, I've talked to a ham in California using my 2m mobile rig
while driving downthe road here in New York. The repeater I was on was
connected to Echolink at the time, and so was the repeater in
California that the other ham was using.

You can also set up a link on your station at home (on a simplex
frequency) and use your handheld to access the link.

You might expect no-code Techs to gravitate to this as a means of
contacting DX without HF privileges - and they do - but many longtime
hams with HF privileges use it too, particularly guys that have
retired and moved away and use Echolink to keep in touch with the
locals from "back home" - especially true of guys who are now living
in condos down in Florida and aren't permitted to erect HF antennas.

>Breakfast or lunch, it matters not to me! A Beef on Weck and a glass
>of Genny would be a great way to enjoy some ham camaraderie.

I might opt for a soft drink instead of the Genny, but other than that
it sounds good to me. Be sure and let me know ahead of time next time
you plan to head up this way, and we'll plan a get-together.

(For those not familiar with Western new York culture, Genny is a locally brewed beer that's quite popular in these here parts)

>OK, great. Like I said before, my next visit to the WNY area will
>most likely be over the Thanksgiving holiday, if I can manage to take
>some personal days off.

Better yet! Gives me a perfect excuse to eat something besides turkey. I like turkey, but usually have had more than enough of it by Saturday.

>I've pretty much given up on being home
>for Christmas, due to the tendency to be forced to spend an
>inordinate amount of time behind the snow blower!

Snow blower!? You ain't a "real" Western New Yorker! If you were, you'd use a shovel like they used to do a hundred years ago. It's still a perfectly efficient and viable means of snow removal. Anybody who uses a snow blower is just plain lazy. :-)

>If I were to
>ever move again, I think I'd just go to various places and walk
>around carrying a snow shovel. As soon as someone asked me,
>"What the heck is THAT?" -- I'd stop!

Just make sure the guy who asks is a local resident and not some tourist from somewhere in the Mojave Desert who's just visiting! Or one of those lazy types who's just interested in clearing the driveway and has never even owned a shovel like a "real" Western New Yorker.

>Ummmm, if that's not an inference to "dumbed down" then what is?

Yeah, I know, Larry basically proved my point for me, and probably
doesn't even realize that he did so - but that doesn't mean that the
rest of the folks reading the exchange didn't catch it. Your post
proves that at least one person did.

Since you're the only one who pointed it out, you win this thread's
grand prize for the week. You can choose between two prizes of equal
value, either two cents towards your next rental of the movie
"Frequency" or an autographed photo of Dick Carroll. Before you make
your choice, I feel it is only fair for me to warn you that there is
no truth to the rumor that all existing photographs of Dick Carroll
have been superimposed onto dart boards - so you wouldn't be getting
any sort of home entertainment device by choosing that option.

>Then, Larry goes on even more to say:
>
>>
>> The current technical
>> requirements in the written exams are strictly amateur level, as they

>And, here's the clincher from Larry:
>>
>> You're entitled to your opinion. The problem is, the NCTA's don't think
>> I'm entitled to mine!

Yes...this is the guy who maintains that no-coders aren't qualified to
even have an opinion about CW...thus Larry doesn't think other people
are entitled to their own opinions but takes offense when he perceives
that someone else thinks he isn't entitled to his. How ironic, eh?

> If I don't follow the rest of the flock of
>lemmings,
>> put on my tie-dyed tee shirt, faded jeans and Birkenstock sandals, and

>> of the requirement to be tested for a useful communications skill, I may
>> as well take that .50AE and use my radio gear for target practice, as far
>as
>> they're concerned!

Instead, I'm supposed to put on my pocket protector, slide rule, and
visor and hold hands with Larry and Dick and sing "The Telegrapher's
Lament" as they chant their mantra of dumbing down in the ARS while
bemoaning the end of the requirement to be tested for a communications
skill that is no longer used anywhere else BUT in the ARS. Hmmmm....

>>The NCTA are classic liberals, and like all liberals,
>> they can "tolerate" anything except a difference of opinion.

You do remember, Kim, that it was Larry and not I who holds no-code
hams unqualified to form an opinion, do you not?

>Larry doesn't know we read between the lines...LOL

Sure he does. That's why he won't bite on the question of eating
elephant dung. By his own standards, he is not qualified to form an
opinion on eating elephant dung unless he has tried some, and he's not
about to admit having sampled the goods, now is he? Hmmm...no, I

suppose not...yet if he expresses the same opinion of eating elephant dung that any sane individual would express he's hung on his own petard by expressing an opinion that by his own insistence he is unqualified to possess - at which point, feel free to join me in insisting that he dine that evening as a guest at the elephant house at the nearest zoo so as to lend an air of legitimacy to his opinion.

Wouldn't it be ironic if nobody filed a petition because everybody
thought someone else was already doing it? You know, kinda like when
the band's open but nobody knows it because they're all sitting there
listening for somebody else to call CQ?

The other thing that occurs to me is, you could basically take the
database of comments filed during the inquiry that preceded the last
restructuring, stamp a new docket number on it, and get it over with.
We've all been through this before in excruciating detail.

>much when it happens.

I also don't think the code test makes much extra work for FCC. It saw
to that itself when it quit keeping track of which Technicians have
Element 1 credit and which do not.

Which either meant that:

(1) Somebody at FCC dropped the ball when they forgot to provision for
the new license database to contain that information (and they decided
to leave said ball on the ground rather than try to recover it. Why?
Maybe because FCC at that point had quit caring which Technicians had
Element 1 credit and which did not? if so, that carries some
interesting implications, doesn't it?), or

(2) The whole exercise was a test to see if Techs with no code credit
would invade the HF bands now that nobody could really tell for sure
if they had privileges there or not - in which case we seem to have
passed the test since as far as I can see, that didn't happen.

But, I digress. However you arrive at it, it seems that no, FCC would
appear to have no reason to care about the chronology here.

Egad! Storm-chasing without your radios in the truck? Why, shame on ya...get those rigs back in your truck where they belong! :-)

As for me, I need to build myself a comm shelf of some sort. I have enough comm gear in the van (to the extent that anyone can ever have enough radios, which is debatable), but some of it could be installed more elegantly.

>The past couple of years have been challenging, if you've seen the news.
>However, prior years saw a lot of "good" (it's always difficult to call bad

>"thataway."

Despite what's said about Buffalo weather in the winter, the place here in NY state that gets the most snow every year is Syracuse, which is off thataway from here. If you were to ask me how I feel about that, I'd tell you that as far as I'm concerned, they're welcome to it. Not that I wish anybody any bad times or anything, but it has to fall somewhere, and every inch of snow they get down there is an inch we don't get here.

>Kim W5TIT, on a Tuesday again--coincidentally

Okay, thanks Larry, just wanted to clarify that.

One last other question, define "whining." Is that anything that you just
don't want to hear, or ?? Again, I am asking this actually seriously, not
fecetiously (sp.?) At least I am attempting to see your side of
it.....

One could view anything that they don't wanna hear as whining, and if thats
the case I hear thousands of "whining words" on a daily basis.

From N2EY:

>I've seen that happen time and again. The CW setups at Field Day get the most
>attention from nonhams, for some reason.

How did non-Hams see any setup, not even a CW setup, at field day? Were they invited or did they see the field day setup when they were driving by, and decided to stop by?

Also, were they male or female, and about what ages were they? Were they anti-social?

Did they just stop by, or stay a while?

Please explain.

At this year's Field Day, we had a (*rather un-attractive) female non-Ham visitor. (I don't know if she was invited). She was a reporter and claimed to be asking questions for the local paper.

No, I didn't stay there the whole time. Also, there was some extra food left over, and I managed to take some with me.

Depends on the setup. For example, one year I set up between the local fire department and the convenience store. There was lots of foot traffic and many stopped to find out what we were doing.

In other cases, the event is published in the community calendar in the local newspaper and people come by.

>
> Also, were they male or female, and about what ages were they? Were they
> anti-social?

What does age or sex matter? No they were not anti-social as they stopped by, asked questions, and talked.

>
> Did they just stop by, or stay a while?

I'm OTOH, haven't a clue as to what elephant dung tastes like, and I
intend to keep it that way! However, since Bob has obviously tasted
elephant dung, I will admit that he is qualified to evaluate it's taste. I
will,
from now on, defer to his judgment of the taste of elephant dung.

>restaurant folks around the Dallas area.

Kim:

Uh huh. I'm sure they do. And how are these people being killed? Who
is killing them? And what are they being killed with?

I'll save you the bother of responding. They are being killed by CRIMINALS
using GUNS. Criminals will always have guns in this country, because
criminals, by definition, are not constrained by the moral necessity to
observe the law, including gun laws. Just ask any victim of gun crime in
Great Britain, where the law-abiding citizens have no rights to keep and
bear arms, and even sporting shotguns must be kept in gun club armories,
instead of in the owner's home. Over there, violent criminals have no
problem getting guns -- they're brought into the country by the SEALAND
container load under the watchful eye of Customs officers who have nice
fat pockets full of payoff money. They are quickly distributed throughout
the criminal and terrorist underground at obscene profits, and end up in
the hands of the same kinds of criminals that they've always ended up
in. Even unarmed criminals are having a "field day" of their own. They can
simply walk into the homes of innocent citizens, even in broad daylight,
since they know with absolute certainty that they will not be faced with the
barrel of a shotgun or a 9mm pistol, as they may have been years before.
The net result is that British citizens are being robbed and killed by
criminals with guns at a rate three times what it was before the country
went to total civil disarmament. Crimes against property have risen to
the point where it is now estimated that fully 50% of the British population
has been or will be crime victims within their lifetimes.

It is a proven fact that everywhere in the United States where "Shall Issue"
Right-to-Carry concealed weapon laws exist, violent crime drops at a
dramatic rate. Your own home state of Texas is one of the leading examples.
It is also a proven fact that the only force that can stop a criminal with a
gun is a law-abiding citizen with another gun. You see, the guns don't
know who is using them -- they are inanimate objects which require a
responsible human agency to utilize them for good or evil. The best
solution to the problem of violent gun crime is to ensure that the criminals
have as much to fear from their victims as their victims have to fear from
them.

"busier bands" say for instance like 10 meters and 2 meters.)

>
> 5. There should continue to be separate subbands on the HF amateur
> bands reserved for Morse Code and digital signals only
>

Agree, as there needs to be some form of organization. Different parallel,
the public roadways; if there wasn't some type of organization on the
roadways there would be even more chaos than there is now. Allocations for
the different voice, digital and morse code modes should be able to be
created with adequate room for all parties to "play well together."

> 6. Separate subbands on the HF amateur bands reserved for Morse Code
> signals only should be created.

See answer in question 5.

>
> 7. Separate subbands on the HF amateur bands reserved for Morse Code
> signals only should be created if the code test is eliminated.

As long as some hams feel morse code is beneficial, there should be allocations for them as well as other modes. Periodic review of usage on some type of a regular basis could help to direct that. See question 5 response as well.

>
> 8. Subbands by mode on the HF amateur bands should be eliminated.

That needs to happen, or needed to happen as far as 30 years ago or more. Any testing I have taken in the public/emergency services field has ALWAYS been at least 100 questions, and some cases as much as 250 questions. I am not declaring as to how many should fit the bill, but I will say we need more questions added to ALL amateur license tests.

2484. UK to abolish code test on Friday

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-24 04:04:46 UTC
From: Alun Palmer <elektros@yahoo.com>
Message-ID: <Xns93C2BEEDBAAelektrosmdonet@130.133.1.4>
Source record: 72169

There have been lot of different rumours floating about, but it now looks definite that the UK will scrap the code test on Friday. This will be the second country after Switzerland, which already did it.

It looks as if quite a few countries will wait until after the CEPT meeting, which turns out to be in September (I had thought it was earlier than that).

I just found some long time ago report I wrote on essential education.(It was long before I got an amateur radio licence or knew that there was such a thing). Surprising, among other things, I wrote that I wanted to learn Morse code. Never was obcessed about it. In fact, I forgot I even wrote that. At that time, I just believed that its something one should learn.

I no longer believe that.

Getting off on a typo is about what I'd expect. Folks in around 300
DXCC countries "on the other end" have managed to "get me".

> And he's talking about jamming other operators to boot! Ain't CW
> operators a cut above the rest? (not)

Wrong dweeb. Go back and get a grip on the thread before you spout
off. The discussion was what would happen if SSB ops moved down into
the spaces where CW is used and CW ops stay put. The results would not
constitute jamming. Work it through.

As if.

>Wouldn't it be ironic if nobody filed a petition because everybody
>thought someone else was already doing it?

One can only hope. Stranger things have happened.

The problem for the petition-filers is a question of timing and ratification. If, as the article suggests, FCC doesn't have to wait for Senate ratification of the treaty, the time to file a petition is right now. But if FCC has to wait for ratification, filing a petition just makes the filer look clueless in front of FCC. Which is not a good way to get the desired result. Meanwhile, if ratification isn't far off, it makes sense to sit tight, refine the petition as best you can, and then present it as soon as possible after ratification.

>You know, kinda like when
>the band's open but nobody knows it because they're all sitting there

I was once a no-code Technician. The only difference between you and I is two writtens and a 5-wpm code test. The ability to pass the 5-wpm is not anywhere near Morse code proficiency and can be passed easily with some study and determination.

I disagree with your stance but I like your fire. Encouraging those with similar beliefs to get off their collective ar$es and make some noise is likely the right direction. I hope that those opposed to dropping Element 1 do the same. I happen to believe we (PCTA) outnumber you (NCTA) by a count of 2:1.

I have read it now. IME, it is more typical for the rule making process to take about a year. I guess the two year figure in this NG comes specifically from this article. Whilst I think that two years is a worst case scenario, one other useful piece of info does come out from the article, i.e. that ratification is not required before the FCC can act (although I'm not sure why not).

My XYL (a no-coder) has asked me to draft a petition to the FCC. Since it looks like others may be waiting unnecesaarily for ratification, I guess I should get to work on it. Does anyone here have any sensible advice on how to draft an FCC petition? I'm sure there are people here who have filed one before.

If you want to CW reqiurement to go away, some one is going need to file a
petition for rule change with the FCC. Until this happens, nothing can change,
I have no problem with the CW requirement going away, as the FCC has stated
Being able to send CW does not make some one a proficient ham operator.
So for those who want to get on HF and not learn code, get of your asses and
file a petition with the FCC. Otherwise, start to study and learn CW.

Larry,

We presently had had an average of .05% growth per year since the new
licensing regs took effect in 2000. at those rates we might see 6%
growth in the decade. This is about 80% LESS growth than we have seen
in the last two decades. Other than possibly a one or two year mini
spurt in growth I do not see it sustaining. Lowering the code
requirement to 5 WPM did virtually nothing not increase year to year
growth, why would one believe that eliminating it would?

There is a least one person posting some astounding numbers based on
the FCC database on the QRZ.com forums which purport to show that 97%
of no code techs are dropping out after the term of the license
expires. Of course there is only about 6 months of FCC data being used
as a baseline due to the grace periods.

Perhaps the no code requirement for HF (if adopted by the FCC) will
keep more of the technician class in the ARS than the numbers predict.

Ummmm, maybe the requirement is dropped in other countries but they don't live by our laws, nor we theirs.... Just because you want to jump off a bridge, don't expect others to. IF the speed limit in other countries is 100 MPH, you feel you deserve to drive 100MPH here too? The FCC had to go along with the INTERNATIONAL community. I'm sure that if you would keep your pants on, they will be issuing shortly a memo to abolish the code requirement. IT IS A BUREAUCRACY... It doesn't happen over night. As to the ARRL, they don't run the country. NOR the FCC regardless what anyone may want to think.

IF YOU want to be a law breaker, have at it... but don't expect the law abiding people to slit their throats at your command. SOME do believe in rules and laws. Obviously, you're not one of them. You portrayed that very well. I'm not a code fan, but hold a 20WPM Extra license. It was a requirement that earned me the right to use the bands much like the license to drive my vehicle.. ALL PRIVILEGES - EARNED. You aren't born with them. It amazes me how many are so gung ho to side step the laws and rules and yet if their feet are stepped on, the first to bitch. Sit back and enjoy what you have. Some day, radio will be so miserable you won't want it anyway. It is going there very quickly. Some day you'll wish there were laws and rules being upheld. As I said, I'm not a code fan, but it took work to get my license... another thing many are afraid of. WORK. When something is GIVEN to you, it holds NO value. When you EARN it, you tend to value it. A LOT.

Just my 2 cents...

I'm with you, although I have much less time now. (Two jobs.) Our friend
went back to Oregon. Sadly, a victim of corporate downsizing...er, I mean
"streamlining." I haven't seen him post in over a year now. But I'm
certainly game. Went to TSR, The Spare Rib, yesterday and had a nice cut of
prime rib.

Bzzt!

Wrong...use of CW with recognized character set is never illegal.
If you believe otherwise, please post the appropriate Part 97
rule. It matters not what the intent might be (i.e. to shield certain
information from media reporters)...as long as conventional
character set is used, it ain't illegal.

> and
> promoting the idea of CW as being a way to "cipher" information is quite
> misleading, don't you think?

Personally I could care less. No different than if two hams
are having a QSO in another language than English because
they know few reporters or others that might be listening
can't understand it.

> Sheesh, take some time off...

Looking forward to doing exactly that :-) :-)

Here's the details from a friend with RSGB access:

Here's a quote from the members only page of the RSGB's website:

>>>>>>>>>>>>>>>>>>>>
The RSGB is pleased to announce that, with effect from Friday the 25th of July, there is no longer a requirement to have passed a Morse code test in order to operate on the HF bands in the UK. All Full and Intermediate Class B licensees are therefore automatically granted their respective Class A operating privileges and may operate on the HF bands using their existing callsigns from the 25th of July. Class B licensees need not take any action to obtain these additional operating privileges.

This long-awaited move comes about following the decision taken at the recent World Radiocommunication Conference in Geneva, which agreed that a Morse code test should no longer be an international requirement in order to hold an HF amateur licence. The Radiocommunications Agency is to be thanked for moving quickly in introducing this change in the UK. The official 'Gazette Notice' to bring in the change in the UK is scheduled to be published on the 25th of July.

A series of 'Frequently Asked Questions' and answers about these changes will be published on the RSGB website. Please note that these changes do not affect Foundation Licensees.

The RSGB welcomes all former Class B amateurs on to the HF bands and hopes that they will obtain even greater enjoyment from their hobby.
<<<<<<<<<<<<<<<<<<<<

So the Brits have to honour of being the first to actually scrap Morse testing (the Swiss have been granted "provision" access)

Cheers,
Bill K2UNK

A troll is one who asks others to do something wrong. In this case, it is use of
10 meters without the proper class of license. The second part of his message is
something that can be done. If you wish to use 10 meters in violation of your
ticket, so be it, it's your NAL, pay it if you want.

His message is half-troll, half good idea. I think we all just need to sit
back and wait a few more months to see what happens. You would be better off
complaining about BPL. If it happens, HF won't mean shit, CW or not.
(Also CB, MW, TV 2 thru 6, 6 meters, VHF lo band and harmonics out the wazoo)

Average, above average, and below average citizens have access to radio --
CB, FRS, GMRS, MURS with no tests.

The best way to get the average citizen in to ham radio is to pass the
tests -- The FCC sed that

You did that when you got your drivers license -- didn't you ???

How did you get thru school, el, hi, college -- took the damn tests --
right?

Achieve me buckos, can do, be all you can be -- take the damn test! Audacity
that's the spirit!

> > invited or did they see the field day setup when they were driving by, and
> > decided to stop by?

At our field day -- many many posters were distributed over three cities -- we had lots of non-hams attend. It was held right down town near shopping centers at a local school. All local high school science teachers and Scout groups were informed. We operated on battery, solar, and generator power. They saw CW, Satellite, QRP, bicycle propelled generator, solar cells and dazzling antennas, tuna can homebrew rigs. ATV and videos of Ham Radio. They were able to talk on the radio by virtue of the GOTA station. A giant picture board explaining Amateur Radio, Emergency Communications, and repeaters was fabricated. Also explained what Field Day was for. Handout sheets -- 200 of them disappeared.

> > Also, were they male or female, and about what ages were they? Were they
> > anti-social?

They were every gender and age imaginable as though that would be relevant. One gal and her two sons 10 and 12 got their ham tickets later on. Another couple sed wow and both now have tickets. Had a troop of boy scouts show as well. Several of them now have licenses. Several high schools now have Youth Ham Clubs. All were very sociable as if that has any bearing on the matter. We had several volunteers bus in local high school students that were interested. Ya gotta work at PR and it takes effort and time -- GET INVOLVED
> >
> > Did they just stop by, or stay a while?

Both, one 11 year old worked Australia and was enthralled --- Mom had to drag him home for dinner. He now has a Ham ticket, passed the code test as well later on.

>
>There are those on the nocodetest side of the fence who take the
>illogical stand that Morse/CW is not useful, outdated, etc.

As far as the rest of the radio world is concerned, it is outdated.
The ARS is the last remaining radio service that still uses it as a
primary method of communication.

>The operative question is how much something has to be useful in order
>to qualify to be tested.

Exactly. There was once a time when CW was so prevalent in the radio world that knowledge of Morse was vital to one's success in radio. That is no longer the case today except for one minor detail, that being the fact that the code test is still part of the licensing requirements. Whether you or I or anyone else in the ARS likes it or not, that's likely to change at some point within the next few years, so those of us (myself included) who continue to debate the point are beating a dead Morse...er, I mean, horse.

>> What I am
>> disputing is the notion put forth by K3LT that one needs to have

>Point I was making is that some folks have claimed "nobody uses CW
>anymore" etc. without any real knowledge of is current use.

Well, neither of us can really account for people who have their opinions spoon-fed to them by somebody else instead of developing their own, can we? Speaking for myself, though, I've been a radio hobbyist for over three decades now. I think I have enough experience to have knowledge of its current use.

The U.S. military has abandoned it. Commercial maritime HF radio has abandoned it...yes, some ship-to-ship ragchewing between radio ops still goes on, but try contacting a commercial shore station on CW to send or receive message traffic. Aviation has abandoned it. Outside of the ARS, the easiest place to find Morse in use is on your scanner, where repeaters used by public safety and business still identify in Morse. Given that, I find it ironic that in the ARS, the last bastion of Morse communications, most of the repeaters have voice ID'ers.

>> >2) There's a 'phone contest going on, and most of the 'phone ops are

>much of the DX is working 'phone, the CW ops will probably be looking
>for ragchews, and may be on bands like 40 and 80, which are more
>suited for non-DX when the upper bands are open.

OK, agreed. Many of the non-contesting phone ops will probably be
doing the same, in fact. They'll go to the lower frequencies because
conditions there are better suited to their intgended activity - and
to avoid the congestion on the higher frequencies that results from
all the contesters operating on those bands. Makes sense to me.

>Consider also that not all contests involve the WARC bands, further
>shifting things.

I'm no expert on contesting, but I hear very little contest activity
on the WARC bands - at least on 12m and 17m anyway. Haven't spent much
time listening to 30m except to listen for signals for the purpose of
gauging band conditions.

>CW ops do not have the bottom part of ANY HF band to themselves. We
>have to deal with digital ops and an ever-increasing number of foreign
>'phones.

Quite correct, of course, and although it slipped my mind when I was
posting the comments, I am aware of that - at least with respect to
the digital signals anyway. I must admit that I hadn't considered the
fact that there are many foreign phone ops down there who aren't
subject to the same farming of spectrum by mode that U.S. ops are.
However, I'd expect the digital signals to cause more problems for CW
ops, since filters can get rid of phone signals much more easily.

>> >3) The 'phone bands become obnoxious enough that folks go to CW just
>> >to have a decent QSO.
>>
>> Well, if we're going to clutch at straws here,
>
>How is that "clutching at straws"?

In posting that comment, I took the word "obnoxious" to refer to frequencies being inhabited by...well, by the kinds of folks that give the rest of the ARS a black eye. Listen on certain frequencies long enough and you'll be treated to a command performance.

In retrospect, though, it occurs to me that you may have simply been referring to the volume of phone traffic one may observe on a band during a phone contest. There's not a lot of room left for ragchewing on phone, so I can see where guys might drop down to the bottom of the band and use CW, especially if the alternative is to try to gut it out on another band where conditions aren't as good for the contact(s) they want to make.

>> then we might as well also include:
>>
>> 4) One has tuned to the 30 meter band, where phone is not permitted.
>>
>Yup.

In retrospect, other digital modes are, which, as you've already pointed out, is a factor that should be considered.

>Good example! Which 'fest, btw? Biggest I've ever been to is
>Rochester.

The one I had in mind is held in a little town in Chemung County, NY called Horseheads, but it's usually referred to as Elmira because Elmira is relatively close by and is better known than Horseheads. Elmira has other claims to fame. Horseheads is the site of the Chemung County Fairgrounds, which is where the hamfest in question is held, but beyond that it's best known for being the place they usually end up catching convicts who escape from the state prison that's not far from there. The last two - both convicted murderers who escaped a few weeks ago using the old "tie the bedsheets together to make a rope" routine (literally) - were found sleeping in a van in the parking lot of the supermarket just down the road from the fairgrounds. But, I digress...we now return you to our regularly scheduled discussion, already in progress.

Amazing what you can do when gravity is working in your favor rather
than against you, isn't it? That wire that took six shots with a
slingshot to get over just the right tree branch comes down on the
first try when you cut the rope, almost as if by magic!

>Fortunately, I'm not that hard on my own equipment, just a bit
>unmotivated to get the station set back up for at least a month after
>Field Day.

Most of my FD stuff is still in my van. However, since that's where it
also spends most of the rest of the year, that's no problem. Still, I
could stand to do some tidying up in the rear cargo area.

>Since I run the digital mode station for my club, I have
>to take not only my radios, but my whole bloody computer system
>as well.

Sorry to break it to you now rather than before Field Day, OM, but
there now exist these wonderful little devices called laptop
computers. For that matter you can do some digital stuff with a Palm
handheld computer. Want a quick hundred bonus points next year? Get
somebody to load the APRS software on a Palm and mate it to their HT,
and demo APRS. I think there's also PSK31 software for the Palm.

BTW, don't try it at night unless you're good with the Palm graffitti.
Typing on that little Palm "keyboard" at a FD station at 3:00 in the
morning is bound to make your eye doctor independently wealthy. Been
there, done that, bought the t-shirt, later burned the t-shirt. :-)

>Fortunately, that's the easiest thing to return to functional
>normalcy at the home QTH. Can't be missing out on rrap now, can I?

Well, I managed to live without it for about four years, but then
again, here I am back again.

Jon, you can't, huh? At a time when the ARRL wanted to save CW
testing, I could imagine the use of upping the numbers. Just my

I suppose you mean, "How could I have fabricated portions to further my
hidden agenda?" The answer would be: by stretching the truth so as to
make it seem that no radio amateur at any gathering is interested in
talking to you. If, however, your statements are true, you seem to have
a god-given gift for honking people off. In all of your tales, no one
seems to want to have a thing to do with you. That leads me to believe
that you are the problem.

> Are you saying they were enthiusiastic about explaining their setup,

>responsible human agency to utilize them for good or evil.

From a bumper sticker that I had on my Blazer before selling it: "No
gun pulls its own trigger."

>The best
>solution to the problem of violent gun crime is to ensure that the criminals
>have as much to fear from their victims as their victims have to fear from
>them.

Better yet, ensure that criminals have *more* to fear from their
victims than their victims have to fear from them:

Punk On Street: Hand over the wallet, buddy! (Sound of switchblade
knife opening and blade locking open)

Intended Victim: Not very bright, young man, bringing a knife to a
gunfight. (Sound of hammer being cocked on Smith & Wesson .357 Magnum
revolver...followed by sound of Punk On Street turning into an albino
with brown pants on and running away at Warp 9)

73 DE John, KC2HMZ
Criminals love gun control, it makes their jobs easier.

The IARU bandplan recommends that you stay above 3.630, however, and in the US we can't go below 3.750. I will glad to work you on a suitable frequency.

Subject: ATTN: Tech Licensee USA Morse Code Freedom Day is August 1st
Date: Thu, 24 Jul 2003 01:54:43 -0700
From: morse@code.is.dead
Organization: http://extra.newsguy.com
Newsgroups: rec.radio.amateur.policy, rec.radio.cb

Let the FCC know that they can no longer keep you from your right to use the
ten meter band allocation if you are a technician licensee. The international
requirement for morse code has been removed and there is no such thing as a
technician plus license.
You don't have to use your identity, but no code technicians need to finally
speak out to the FCC they will no longer be oppressed by rules designed for the
stone age of electronic technology.
Get on the air at 6pm local time on August 1st or if the band is open any time
to make contacts in the 28.300-28.500 MHz that is allocated to technicians for
voice. Or if you have a computer you can use the allocated technician CW bands
to send and receive morse code.
Currently the FCC and ARRL want to drag this morse code requirement out for
one or two years while they put BPL and other technology on the fast track. I
will be on the air and I hope 10,000 or more no code technicians will join me.
I guess Hollingsworth will have to require 10,000 people to turn in their CW
proficiency certificate if YOU will join us.
The morse code game is over and I'm not driving 55 when the speed limit is
really 70 mph and the government hasn't changed the signs yet. Just go by the
limitation of your technician license and don't go overboard, we want to show
that just because we didn't pass some dinosaur morse code test that we are bad
operators.

Get on 28.306 USB at 6 PM local time to talk with other no code tech's that are protesting the FCC and ARRL stupidity.

You got that right, Dee.

Also, there's the effect of being exposed to something the wrong way.
Example: Old friend of mine got a new boyfriend who simply loved
calves' liver. She hated the stuff. I said "problem is, you've never
had it cooked the right way". So I made them both some of my special
recipe sauteed liver/bacon/onions combo. She was converted. They got
married. Ah, romance. Call me Cupid with a fryin' pan.

> > for the mode.

I don't particularly agree with any of this. While learning Morse
certainly was a requirement for getting a license back when I got into
the game it was also quite obvious that what mattered far more than
any issues surrounding the code tests were the innate characteristics
of ham Morse as they relate to the raw effectiveness of the mode vs.
any other modes. Bang for the buck on gear per watt per lousy antenna
per parts count per potential number of DXCC countries countries
confirmed. In other words FCC test requirements completely aside I
learned Morse because it's the best tool on the shelf for what I
wanted out of ham radio going into the hobby a half century ago.

In the following half century stuffed with massive technological
upheavals and advances the stuff is *still* the best tool on my shelf,
NOTHING has changed. Again, the tests completely aside. I don't "love"
Morse, that's a ridiculous concept. I don't go ga-ga over any of the
rest of my tools either. Screwdrivers is screwdrivers and Morse is
just another one.

<SNIP>

You should not hear any phone below at least 1830, 3600, 7040 (7030 in region 3), 14100, 18110, 21150, 24930 or 28300, unless people are ignoring the bandplans, which aren't compulsory everywhere. These numbers are based on the _old_ IARU bandplans before the IARU reallocated the bottom ends of the phone subbands (and the top ends of the CW subbands) to data (actually just RTTY at the time). Some phone ops may go too far down in contests, but even some contests disallow phone contacts in the CW subbands. The perception here in the US is a little skewed because the US prohibits phone in parts of the phone subbands (not a typo, I meant exactly what I said).

Too late, I've written it. All 22 pages of it. I would post it here, but
none of the rule changes are visible after you convert it to ASCII. I
could post a pdf version on the web if anyone is interested?

In a nutshell, it asks them to ditch Element 1 and give all Techs all the
novice subbands. I may as well go ahead and file it, now. The FCC want 5
copies, though, including the original. That's a lot of paper and ink!

You know, I hated the term "imaginary" for these numbers. To me
"imaginary" = "fake".
It's just another convention that is too deeply entrenched to ever fix.
Like current
being in the opposite direction of the way the electrons actually go.

For anyone that wants to save their radio waves from an RF intrusion
of the greedy type, read on.

This is much more important then the CW issue.
This is a real problem in the making for ALL RADIO USERS!!!

Write your congressperson, write the chairman of the FCC, write letters
to the editors. Speak loudly. Speak often against BPL. Do not take this
issue lightly. Do not assume someone else will do it for you.

Our radio waves are in JEOPARDY!!!

Right now they are the only organization who represents us at all. If you want to control their policies, become a member and climb the political structure.

Those who are not members of the ARRL have chosen to remain unrepresented since they have done nothing to form a lobyy to take the place of the ARRL.

Doubtful. Keep in mind that a large percentage of no-code techs (and other license classes for that matter) are inactive and will not get the word. It's been awhile since the requirement was dropped to 5wpm and there has been no noticeable surge of pre-1987 Techs getting the paper upgrade to General and no surge of Tech plusses taking the General written. All of these people should have gotten their upgrades by now and haven't. There's plenty of hams don't even know about it.

You "deserve" nothing! You wanna be on HF? Study the code.

And, for the record, I was never able to pass the code test. So, I
never got a ham ticket.

Even though most European nations don't have mandated subbands like the US,
it is still considered poor operating practice to disregard the voluntary
band plans. So please operate voice on the higher end of the band and use
the standard LSB that is the accepted norm.

There is absolutely no contesting on the WARC bands. All contest organizers
and sponsors have chosen to honor the approach that these are to be kept
free of contesting. This is for at least two reasons. 1) Have an area
where non-contesters can operate without getting run over by those in a
contest. 2) The WARC bands are just too narrow to allow contesting.

I believe that if a technician was licensed a long time ago, he would already be grandfathered to general. I also believe that the codeless techs and tech pluses are lacking one element of written exam to be grandfathered into a general class ticket, but I could well be wrong. Back in the late 60s I also managed a qso using land-line Morse. I doubt there are any CW programs for computers that would have much luck with that :)

Um, Keith, what about element 3? You are aware there is an additional written exam which will have to be taken - even with the elimination of code. Or do you believe that if you can spell your name correctly and put your address (also correctly) on the application, that is a difficult enough test?

>radio scene.

That's a people lethargy problem, not an equipment/technology
availability problem.

The easy-cheapie way is to use commercial 802.11b Wi-Fi gear - one
of the channels is smack in the amateur band where we have priority
over the non-licensed Part 15 users.

The guys in Silicon Valley cobbled up 2.4 gig high-gain amplifiers
and antennas (which are unlawful for non-licensed Wi-Fi use) and as
long as they ID with their call signs and the content conforms to
that allowable in the amateur service, such operation is perfectly
legal.

That'e almost as good as my susceptability analysis that I did for
the Wireless Communications Alliance that a 1.5 KW transmitter in
the non-licensed "shared" band would front-end-overload the
non-licensed stuff in spite of the spread-spectrum ":protection"
built into the coding. All the hams at that meeting nodded their
head in assent, while the non-hams didn't have a clue.

Go for it.....

Do you mean to set your carrier frequency to the carrier frequencies of the
interfering BPL signal? If so say so.

As I understand it a committee of the House voted to overturn it. It would
then need to go to the Senate. And all that bs.

This may indeed be the ONLY route we have to take against the FCC concerning
BPL.

"elements" as in the individual di's and dah's the make up each character.

I've been looking at the .gif from Texas Star, and have already learned
to copy a few characters. The first one I learned is "3". All the calls
here have it. Also "k" and a few more in my call.

dah-di-dah dah-dah-di-dah?

I figured with my musical background, it would be easy. I just don't like
you guys trying to force feed it to us. It won't look good on your shoes. <:

Nothing to worry about. You wont recognize cw if it bit you on the ass.
That is obvious from your stupid comments.

Oh and BTW...what makes you think because CW testing will be ended that CW
itself will be ended? You really are a stupid idiot ain't ya?

2580. Question for the No coders

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-25 00:14:51 UTC
From: Elmer E Ing <"Elmer E Ing"@tutor.org>
Message-ID: <vE_Ta.11268$ff.885@fed1read01>
Source record: 72418

How is that some folks can spend hours telling you why something can't be done and someone else can actually do it in a fraction of time that the dissenter took to tell you ---- can't can't can't?

Case in point -- using google and groups search --- some of the no-coders have posted hundreds and I mean hundreds -- nay thousands -- of no code posts.

I submit you could have learned the code in half the time it took to complain endlessly about the code.

Get a dose of old fashioned America CAN DO and stop making excuses.

362,073 + USA Amateurs have done it (not including tech pluses - have no figures on these) .

Take this test
1. CW is antiquated -- Yes __ No___
2. I don't want to learn anything I don't Like -- Yes__ No ___
3. I don't have time -- Yes __ No ___
4. It is too difficult -- Yes__ No __
5. Its all a case of dinosaurs trying to keep us out of Ham Radio Yes___ No ___
6. I'll never use CW -- Yes ___ No ___
7. It is just a dumb tradition -- Yes ___ No ___
8.It is a waste of time -- Yes No ___
9. Write In ______ Yes ___ No ___

Add up all your yes answers -- whether they are true or false -- THEY ARE ALL COPOUTS
They are excuses that keep you from achieving your goals.
Hope you don't do that with the rest of life's requirements.

The old Elmer

> A tech will still have to pass the element 3 written in order to obtain the
> general. A modest try at a troll, no doubt.

Hell, element 3 was easy enough to pass without cracking a book.

Tonight, chapter 9 in the ARRL extra study book, antennas.

Hamfest this weekend. Not enough time to learn the rest of the CW
characters, but free VEC tests there. I only missed element 4 by
two answers, and I picked that info up in the first 2 chapters.

Some read the test questions and others just read the book, the hell
with the questions. Learning the answers doesn't help you in the
real world, learning the how and why helps you in much better ways.

http://www.bratsatv.org/hamfest.html
$6.00 entrance fee, + $10.00 for a tailgate space. Open 6AM, 7-27-03.

A few weeks later, is the CCARC tailgate fest on 8-10-03, if rain, 8-17-03.
$5.00 donation, buy, browse, sell, socialize. FOOD VENDORS THIS YEAR!
http://www.qis.net/~k3pzn/Tailgate.htm

Followed by their hamfest, 10-26-03.

The multi-club group I went with from 1996 to 2000 made it a point to set up in public parks so that the general public would be able to see them. It was also announced in local papers. I'd say that over the 24+ hours we typically had several dozen nonham visitors, at least.

>Also, were they male or female, and about what ages were they?

From babies to senior citizens and of all genders, races, nationalities, etc. A pretty even distribution.

>Were they anti-social?

No. Nor were the hams at the Field Day.
>
>Did they just stop by, or stay a while?

Both.

Not at the circuses I attend!

"Say.....I don't see no huley-huley girls....." - Foghorn Leghorn

The fact is that a good CW demo attracts and amazes people, particularly young folks. They've seen computers since they were born and talking into a radio is old hat too. Morse code is something completely unique and different.

>them.

I disagree.

I think the best solution to the problem of violent gun crime is to ensure that the criminals have *MORE* to fear from their victims and the criminal justice system as their victims have to fear from them.

>>> BTW, If I were the owner of a convenience store, I'd have a special door
>>> chime that played a .WAV of a 12-ga. pump-action shotgun being racked
>>> every time someone came in after sundown.

>>And, you'd probably be local news.
>
>Yeah. The story would be about why my store is never robbed.

There is nothing so stupid that some criminal won't try it. Heck, there was at least one case where a couple of guys tried to hold up a gun shop. Owner was better armed and trained than they were. He's OK. They aren't.

Besides, total disarmament in this country would simply not work because millions of law-abiding citizens would simply hide their guns and ammo. Indeed, many non-gun-owners would go out and buy guns and ammo before any ban went into effect.

I still think the best arrangement would be to license gun owners, not their weapons. If someone is an adult, law abiding, responsible taxpaying citizen with a clean record, they should not have their rights infringed. OTOH, children, people with serious mental problems, and criminals should not be allowed to have any dangerous weapons. OF course the laws would have to be structured to put the burden on the govt. to show why someone should not get a license, not the other way around.

One reason is self-esteem. Some of the people in my local club said they didn't want to learn Morse code at first, then they learned it anyway. By the way, same persons in club that did that now claim to enjoy Morse code. People that don't want to learn the code have the self esteem not to be pressured into it.

Another reason is image. They don't want it shown that they put effort into a worthless (as perceived by non-Hams) pursuit.

Its also irrelavant.

Its also unfairly positioned in between the (technical) license classes. That equates code to technical ability.

As someone mentioned, its curiosity.
When people drove by the shack on a "DXpedition", traffic slowed down when they
say all those antennas around the shack.

I told him he should aim to stay above 3.630, although most over there
consider anything above 3.600 fair game as that used to be the extent of
the phone band before they created a data subband.

You will not likely see a good looking girl if you spend too much time in Ham radio. You definately won't hear/see one if you operate CW.

How does breaking the rules of your license class prove that you are not
"bad operators". Seems to prove just the opposite.
The code may be an antiquated method of communication, but, it does prove
your desire to learn and work for what you want.
Remember, "Anything worth having is worth working for".
I may only be a 5 WPM extra because I got my license after the rule change
but I studied the code, struggled with the code
and finally passed after 3 tries. I value my license more because I had to
WORK for it than if all I had to do was fill out a form
and wait.
Nothing you ever learn is wasted.

Understood. But since ARRL is a representative organization, some
might think the majority opinion on an issue like this would be
important.

Exceptions that prove the rule.

> I guess these days most repeaters have
> voice ID, though.

I know some that have both. Voice unless there is audio on the receive
channel, so you don't have to talk over the ID.

> > I don't know any. I do know lots of

I don't think having a few more choices would be a problem. On a
subject like this, most hams WANT to answer - hence the high response
rate.

One thing I found interesting in the results of the surveys sent to
nonmembers was how many were returned due to changed address.
>

Interesting. 28 years ago, in paper-and-pencil days, Hq. thought it
was a good idea, and had the resources.

Exactly. The point is that there's a difference between passively
asking for input and actively seeking it.

>(Say, were you a Perot voter by any chance?)

Now you've gone from disagreeing with me to being insulting! ;-)

It's because of Perot we had 8 years of Bill Clinton (he divided the
Republican vote TWICE so that Clinton got in). Just like Ralph Nader
gave George Bush II his shot at the White House.
>
> I don't quite understand why you think an all-inclusive vote should be

Not a question of smarts. A question of getting accurate information.
Some would say getting accurate information on this issue is a waste
because it's a lost cause.
>
> On the other hand, if you are willing to spend the money to do the

Agreed. But what is the majority opinion? Dump Element 1 ASAP? Keep it
at all costs? Something else, like drop code but beef up the writtens?

> Those who support Morse testing will be angry with
> the ARRL if it comes out for elimination of the test no matter how that
> decision was made. Those who favor elimination will be equally angry if
> the ARRL supports continuation of testing.

I think I said that way back in the beginning. Ah, here it is:

"Whatever position ARRL takes on this issue will be very unpopular
with a
large number of members and nonmembers alike, so it is important to be
able to back up that position with solid data. A valid survey of the
entire membership, backing up the ARRL position, can only serve to
improve ARRL's credibility with both the amateur community and FCC,
and
increase support for the position chosen -- whatever it may be. Who
could fault ARRL for going with the majority opinion of its entire
membership?"

> And those of us who think far
> too much energy has already been wasted on this subject will groan yet
> again if ARRL spends any more substantial resources on it.

OK, fine, we'll just go with the results of the 1996 poll, shich
showed the majority favoring code testing retention....
>

They cannot be read by computer? How was it done in '75?

> > Why not?
>
> In my opinion, because it's a waste of resources -- time and money -- that
> would be better devoted to tackling the problems Amateur Radio faces that
> are important -- a list that does not, in my mind, include anything to do
> with Morse testing.

OK, fine. I'd put BPL far ahead of code testing in importance any day.

But what I'm trying to point out is that many hams out here in the boonies feel ARRL ignores them and their opinions. Too many think that decisions are made "up there in Newington". Perhaps a large scale poll would help change that, perhaps not. However, I don't see how an attitude of "it's not worth the resources to poll the membership" is going to help change that "ivory tower" image.

There's also the possibility that FCC will simply dump Element 1 on its own and save ARRL from having to take a position at all. In that case, polling would be a waste because it would not make any difference in the outcome.

So how about this:

Suppose FCC just dumps Element 1 by MO&O, saying it's all been debated before. All it would take is one sentence, something like "Based upon decisions made with regard to WT98-143 and the Wormser-Adsit-Dinelli Petition for Reconsideration, credit for Element 1 is hereby given to all applicants for any class of amateur radio license".

Should there be other changes to the license requirements and privileges, particularly the entry-level license classes? Seems kind of odd that in a nocodetest future, most of the HF privileges of an entry-class ham would be CW.

Even though the FCC does not maintain the info in their database, you will certainly have to be able to provide proof via the appropriate documentation that you do have the privileges should you ever receive an NAL from the FCC. That means that the burden of proof will lie on the Technicians to prove they have the privileges not on the FCC to prove that they don't. The FCC will most likely maintain that anyone who cannot provide that proof does not have the privileges. You may think you have a loophole but you don't. So you had better keep that CSCE or old Novice license or old Tech Plus license in a safe place.

Thanks Keith I'll add those to the copout list.

BTW SSB is probably 30 or 40 years old.

Better check you receiver and antennas -- the bands are loaded with CW activity.

The 80M band is a wasteland all over the band. Try 30M -- hi hi. 20M has a lot of activity also.

I worked a C6A from here in California on 6M CW -- ssb was buried in the noise.

Something's wrong with your radio then. I find the CW bands to be rich in
signals most of the time.

Says who. We had several pretty females with plenty of self-esteem at our Field Day. Someone with self esteem doesn't have to be out chasing dates. They can follow their own interests even if that is operating radio.

Wrong. Just look at the YLRL. Plenty of females (including good looking
ones) of all ages and many operate CW.

Damn straight. ;-)

I still have and use my shovel from Palmyra/Newark days. Just the
right size for the car trunk, snow slips right off, eay on the back.

The FCC will not have to verify it. The FCC will take that stance that the burden of proof will lie on the Techs. If the Tech can't prove it, they will be considered as not having the privileges. Amateur radio is considered a privilege not a right. So if you lose your proof that you have HF privileges, you lose your ability to operate on HF.

Techs with HF only have ONE voice band not multiple voice bands.

I believe he is referring to the part where they are asking the Technician
Class operators to go ahead and get on 10 meters to show support for
dropping the code requirement.... you need a TECHNICIAN PLUS or higher
license to get on 10 meters. SO, by wanting those NOT legally licensed
according to current rules and regulations, it would in fact, be ILLEGAL!

Though I've been a member of the ARRL longer than I've been a ham, I
often find that it is wiser to represent myself than let the ARRL do
it. We often have differing viewpoints.

Those who are not ARRL members can simply represent themselves to the
FCC.

Well, I did just what you asked! Here is what I sent:

TO: Michael K. Powell, Chairman, FCC <mpowell@fcc.gov>

Dear Chairman Powell,

I am an Amateur Radio Operator, licensed for over 21 years. As you know,
the recent World Radiocommunication Conference, WRC-03, has eliminated
the ITU International Treaty requirement for Morse Code proficiency testing,
and has left the decision whether or not to require Morse code testing in any
member nation's Amateur Radio Service up to the individual administrations.
I appeal to you NOT to take any action to eliminate the Morse code test
(Element 1) from the U.S. FCC Amateur Radio Licensing requirements.

You will undoubtedly be receiving many petitions from current and
prospective radio amateurs to do this, but the fact is, these people are
simply unqualified to know and understand the benefits and advantages
of the Morse/CW mode in the Amateur Radio Service. Indeed they, for

the most part, simply desire to be relieved of the necessity to expend the time and effort required to learn a useful radiocommunications skill at a basic proficiency level. Such "dumbing-down" of Amateur Radio serves no useful purpose, and would, in fact, probably have the effect of placing HF radiotelephone operating privileges in the hands of a large number of eager, yet technically uninvolved individuals. This could cause a dramatic increase in the number of operating violations on the HF voice allocations, increasing the FCC's enforcement workload without having any overall positive impact on the service.

Knowledge of the Morse code gives radio amateurs the ability to communicate effectively using low power, and under operating conditions which cause even the latest digital modes to fail. It is the ultimate backup communications mode. Unfortunately, the many benefits of the Morse/CW mode will be increasingly unavailable to radio amateurs if future operators are not required to obtain even an entry-level exposure to the use of the Morse code through a testing requirement for an amateur license with HF operating privileges. Therefore, I urge you to simply leave the FCC's amateur radio licensing structure and requirements as it is, and retain the Element 1 Morse code test forever. I assure you that this is in the best interest of the Amateur Radio Service and the FCC.

Sincerely,

Lawrence J. Roll, K3LT
1300 S. Farm View Dr. A-31
Dover, DE 19904-7721
(302) [xxx-xxxx]

Note: Copies to be sent to the Commissioners as well.

John:

Actually, it's not as bad an idea as it sounds. We do it that way because we leave the color-coded wire ends on the control box terminals, making it easy to duplicate the setup the next time. Wiring charts tend to get lost. Now, if only I could figure out a way to make my technically-inclined fellow hams stop putting 3-element HF Yagi antennas together with the director and reflector elements reversed! And don't suggest that I number the elements and boom 1,2,3…that doesn't seem to cut any ice with them!

>somebody to load the APRS software on a Palm and mate it to their HT,
>and demo APRS. I think there's also PSK31 software for the Palm.

I've been using personal computers virtually since the day after they
were invented, and never owned a laptop! One of my fellow club
members brought some badly clapped-out used laptops to FD this year
for logging purposes, and out of four, we got one working! Last year,
our club President got his brand-new Dell laptop toasted, we don't
know if it was a power surge or stray RF, but the darn thing never
came back to life, and Dell couldn't fix it! For a lot of reasons, the
traditional desktop systems seem to work better and tolerate a lot
more rough handling than laptops. I made one concession, however,
and purchased a flat-panel monitor, which is much more easily
transported than my old 17" CRT monitor, which I gave away to my
YL friend when hers went South.

>BTW, don't try it at night unless you're good with the Palm graffitti.
>Typing on that little Palm "keyboard" at a FD station at 3:00 in the
>morning is bound to make your eye doctor independently wealthy. Been
>there, done that, bought the t-shirt, later burned the t-shirt. :-)

I prefer full-sized keyboards, since I'm something of an accomplished
typist. At home, I use the best keyboard available -- a Northgate
OmniKey Ultra, which I purchased in 1990 and is still going strong.
It has the same key size, placement, weight, and stroke as the old-
fashioned IBM Selectric typewriter keyboard. It has other features
like programmable function keys, and F-keys both across the top and
down the left side of the main keyboard. For FD, however, I just
bring the OEM cheapie that came with my computer. At FD sites,
things tend to get spilled.

>
>One could view anything that they don't wanna hear as whining, and if thats
>the case I hear thousands of "whining words" on a daily basis.

Ryan:

I would define "whining" as "shrill, uncontrolled complaint, usually made on a topic of concern to the individual making the complaint, but without any particular basis for objection other than the subject in question is a matter which the individual feels powerless to control, or chooses not to control by virtue of the personal effort or expense involved. The "whining" is usually directed at a person or organization the "whiner" considers to be responsible for the situation to which the "whiner" objects.

I will admit that most mature, hard-working, industrious and ingenious people definitely "don't want to hear" whining. For example, I certainly didn't appreciate being accused of being like Hitler, and in favor of things like "ethnic cleansing" because I supported the concept of code testing in the ARS. I truly could have done without hearing that, to be sure! For one thing, it quite possibly could have spared me the time I've spent on Usenet in the last 14 years.

John:

I've had the experience of smelling elephant dung, and since the sense
of smell is directly related to the sense of tast, my "experience" made me
realize that the elephant dung would not make for a particularly
wholesome and appetizing meal. OTOH, people who have never learned
and used Morse code have no alternative experience from which to base
their objections to code testing, since they haven't learned, first-hand, of
it's operational benefits and advantages. The "elephant dung" argument
is purely apples-to-oranges.

1. The ITU left the international interpretation up to individual countries and
administrations.

2. The current structure will remain the same until FCC makes any changes. This means that present band plans will stay in the meantime. They could decide to keep 5 WPM if they so choose.

3. The "protest" could fail if band conditions aren't conducive on 1 August.

4. And such a protest, while seeming to be in order, might lead to things worse
than the "problem". Who knows?

It's a symptom of today's society: I want it, I want it NOW, and I don't
want to
work for it--instant gratification. Unfortunately, why don't we just come
out and
say it? What the anti-code code folks want is the same anarchy that
prevails on
the CB band. Trouble is, they are not smart enough to realize that the
result would be worse than the cure: when they finally finished ruining
radio and making it unusable, they would wish that there had been some kind

of order after they can't talk across town for the keyclowns. It isn't a matter of whether there is a code requirement or not, it is a matter of what they ultimately want:
Next organization to pop up will be NTI--No Test International. Just go to Wal-
mart or Bubba's CB shop and VOILA--"Ah'm one of them 'ere 'good' operators, thar, tan fer thar?"

Too bad the ARRL has put itself in such a bad situation. As soon as morse code
is removed from HF operating requirements those that are mad about the ARRL not
stopping code removal will quit. All those no code techs and new hams that come
into the hobby will never join a organization that did everything it could to
keep the average citizen out of the HF bands. The ARRL has kept ham radio in
the dark ages by requiring horse and buggy morse code technology.

While they might not "catch" every one of the protestors, it might cause some
of them to lose the ability to gain access to other bands. Such as the general
bands. If found breaking a rule, a ham can be restricted, fined, revoked,
or denied the privilege of upgrading. I am just saying (even tho I smell a troll) that
such a "protest" is not a good idea, nor the way to affect change. If someone is
willing to break the law instead of waiting for change, or petitioning for
said change, then those so-called "good" operators don't deserve what they seek in
the first place.

Well, I learned to ride a horse before the age of 8. I was plowing on a
John Deere by 10.

The same thing could be said about Morse. Yes, it is old. But *if* radio
should fail (terrorists, infrastructure, etc) then CW can get thru when
others
fail. I learned it before there was a hint of doing away with code for any
license
class, I still will know it if it goes away, and, yes, I can still ride a
horse. Like CW horses are fun and no reason for me to have to do either at
present. But if
I need to I can.

Your list of priorities is yours and is not at all indicative of the membership's as a body. You're not any more prescient or more on top of what the membership thinks than I am. Since the code test wheel is apparently going to make yet one more revolution and many members do have opinions on the code test question I think a poll of the membership would be very much in order. Particularly in light of ARRL BoD divisive cat fight which preceeded the last revolution of the wheel. It's time for solid membership input on this one, repeat debacles get boring.

I don't agree with Jim's proposal for a detailed survey for the same basic reasons you don't agree. I'd like to have a very simple version: "Do you want to have the code test eliminated. If yes check here." "Do you want the code test retained? If yes check here." Any four year old could handle the tabulation . . .

This is the reason that the morse code requirement that has been pushed by the ARRL for the last twenty years will destroy it. All the no code techs and ham newcomers will never join the ARRL when they get their HF privileges.

Yes.

> 3. I don't have time -- Yes __ No ___

Stupid question.

> 4. It is too difficult -- Yes__ No __

Not for me. But not everybody is wired the same. It's absurd to assume all no-coders are CB-ish ham-wannabes who demand a "free ride." I know several who are pretty sharp, enthusiastic and eager to push the hobby/service forward. In 2003, is amateur radio well-served by using the Morse Code requirement to disqualify prospective hams who otherwise have much to contribute?

> 5. Its all a case of dinosaurs trying to keep us out of Ham Radio Yes___
> No ___

Yes. It's human to be threatened by change. But I'm puzzled that some people who are immersed in this high-tech activity, where innovation and change are revered, seem to be terrified by these very things.

> 6. I'll never use CW -- Yes ___ No ___

No. I use QRPp CW to tune my antenna all the time. Heh.

> 7. It is just a dumb tradition -- Yes ___ No ___

No. It *IS* dumb to be consumed with nothing but tradition. Some of you pro-coders act like Bama football fans, who *still* can't deal with the fact that the BAHR is no longer around.

I find the arguments that Morse Code proficiency is useful under extreme conditions and circumstances very appealing. Just not enough to make it a defining issue in who gets a license.

> 8.It is a waste of time -- Yes No ___

No. Especially compared to the time spent on this poorly designed test. But it is my time, so there.

Just because you did blah blah in 1960 doesn't mean the technology savvy
person of today should be tied down to some silly morse code test. I'm sorry to
inform you that if ham radio doesn't change in the next few years there will be
no one left to use it.
For gods sake are you that arrogant and ignorant of the world around you? I
bet you have a fancy computer. Let me put the morse code requirement in
perspective for you. What if the FCC and a national computer user group
required you to have a license to use a computer and to get a license you had
to pass a keyboard test of 35 WPM? I bet you would be screaming bloody murder
along with computer manufacturers and congress. The morse code test is the same
way.

And I suspect anyone who did this would find himself very much alone on those frequencies. Only an idiot would risk his license doing something like this. That and your provocative email address, should be enough to convince most you message is nothing more than a message trolling for suckers foolish enough to take it seriously.

That is very easy to claim but the fact that neither the military or government requires all their operators to learn CW clearly suggests there is something seriously wrong with that claim.

Dwight, There is no way for anyone to know if a tech license has passed a
morse code test and all techs have voice privileges for 28.3-28.5 MHz.
What is the FCC going to do run around and check every tech license holder?
Besides would you rather give up ten meters to truckers and CBers?

You have a VERY active imagination. He asked for " properly licensed "
individuals to help out on Aug 1. The other method he described was
for CBers and others to contact the FCC He did this by posting the
message in rec.radio.cb

>"A group to protest the requirement of morse code for properly licensed

I'd not sweat it Keith.

I've been a ham since 1977 and an SWL
since 1969. Seen alot of changes and many
personnas come and go.

The CW argument will always be the archtype of ham radio's
arrested culture as hams, for some reason that I still cannot
fathom, always feel themselves and their equipment to be
"above" everything and everyone else.

They (we) may have had a technical edge back in the late
60's and thru the 1970's when the guy "with the funny
antennas in his yard" was the only person on the block who
could communicate around the world.

Today we are a curiosity, and an obsolete one at that.
Some of us still hold onto the ancient dogma of CW
or die, others new to the hobby are more progressive.
The bottom line however is that technology has passed
us by a very long time ago.

Our neighbor who has a Nextel phone with the iDEN
"walkie talkie" feature activated hanging on his belt and
a wireless ISP link for his laptop in his car is so far
ahead of us technologically that it's foolish to think that
hams (except for a very few) will ever apply such technology
to our ancient SSB radios and older HF/VHF band allocations.

We used to be unique, in that we could step beyond the
telephone to make a "wireless" long distance telephone
call. Today, anyone with inexpensive technology and a
Monthly Plan can run circles around us as far as communication
is concerned...

True, in an emergency we will be needed, and when the Sats
or Trunks or Links go down we may still be able to communicate
but there will still be those who insist on using the 80+ yer
old ARRL Message Radiogram Traffic method, and CW, while
the public looks at us, scratches their head, has a laugh, get's
bored and goes back home....

Buggy whips and crank start cars. Calling CQ...CQ...
Looks like Wayne Green was far ahead of his time all along
in those long-winded editorials in 73 that I love to pick up and
read today in retrospect/hindsight...

Ken :) :) :)

ps: In one of Bin Laden's grainy videos from his former
Afganistan training camp, you could see him holding an
HT with a telescopic antanna. If you look *real close*
and freeze the frame, you can make out that the radio
he is using is a vintage Icom IC-2AT. I bet one of his
friends bought it for him at Dayton or mail order. rotflmao

2642. replace cw test with typing test!

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-25 11:02:38 UTC
From: David Robbins <k1ttt@arrl.net>
Message-ID: <0cedneFAGJTUk7yiXTWJkQ@crocker.com>
Source record: 72480

I think the fcc should replace the cw test with a typing accuracy and speed test. Just think about how much nicer the digital segments would be if everyone had to be able to type fast enough to keep their buffers full! No more diddles and wasted bandwidth while someone hunted around for the letters trying to answer a simple question that wasn't on their brag tape. This will of course become much more important as the manual digital method is phased out and the hf bands become more heavily used.

How did ARRL put itself in the situation?

>As soon as morse code is removed from HF operating requirements those that
>are mad about the ARRL not stopping code removal will quit.

Some will, some won't.

>All those no code techs and new hams that come
>into the hobby will never join a organization that did everything it could to
>keep the average citizen out of the HF bands.

"Keep the average citizen out of the HF bands"? How? FCC makes the rules, not
ARRL. The average citizen isn't interested in ham radio.

>The ARRL has kept ham radio in
>the dark ages by requiring horse and buggy morse code technology.

Nonsense. FCC makes the rules, not ARRL.

And it's more like stick-shift technology.

Since 1990 it has been possible to get full ham privileges with only a 5 wpm
code test, a medical waiver (doctor's note from ANY doctor) and the required
writtens. FCC said way back in 1990, and again in 2000, that they could not get
rid of the 5 wpm code test because of the ITU treaty. Treaty's been changed but
FCC hasn't done a thing. How is that ARRL's fault?

ARRL's policies are decided by the Directors. Who are elected by the members.
Some of them want the 5 wpm code test to go, others want it to stay.

If there really are lots of folks who want ARRL policy to change, all they have
to do is join up and elect Directors who want those same policies. Or run for
Director themselves. Simple.

Why hasn't that happened?

The date in question is March 21, 1987. If you can show that you had a Tech
before that date, you get credit for Element 1 and Element 3. That plus a
current Tech gets you a General. But you have to go to a VE session to cash in
the credits.

>I also believe that the codeless techs
>and tech pluses are lacking one element of written exam to be grandfathered
>into a general class ticket, but I could well be wrong.

Element 3. March 21, 1987 is when the old General/Tech written (old old Element
3) was split into separate Tech and General parts (old Elements 3A and 3B).

They do exactly that if they're CW dxers. As do the SSB dxers who are
not in the contest but are out to work new ones which get on the air
for the contests. I'm not a phone contester but I've worked any number
of expeditions during the phone contests. The inverse is also true,
SSB contesters run CW in the CW contests to pick up new ones but are
not in the contests to generate scores.

Note that a huge percentage of the DX contesters are not "CW ops" or
"Phone ops", they're both.

> >Meanwhile, hams who are working CW (and obviously not interested in

Per previous if the CW op is a dxer he'll most likely be on the "hot
bands" chasing CW DX and/or mixing it up in the phone contest. If the
CW op is a ragchewer nothing changes and he hangs out where he usually
does.

> OK, agreed. Many of the non-contesting phone ops will probably be

What?? Ain't the way it is at all. The contests do not completely
occupy any bands, the ragchewers simply move up their favorite band
away from the contests and carry on as usual. Bitching about
contesters of course or they shut down for the weekend and go do
something else.

Yeah, we heard all the same nonsense 11-12 years ago when the nocode
ticket became available. Can you cite a single example of a nocode who
"pushed the hobby/service forward" since then? Where's the BEEF?! And
while you're at it perhaps you can explain what would change in this
respect by handing nocodes access to the HF bands too?

Remember when I said I like your fire. Fire does not equal obnoxious. Folks
are actually trying to HELP you here by correcting your innacurate
statements. Recognize that. Try being nice, courtesy works wonders and
breaks down the highest walls.

I'll stick. If simply getting off one's dead ass takes an act of
"intrepid boldness" one has problems far beyond just learning the
goofy code.

The League will just try to convince them it was all their doing just as
they did with the no-code Tech licence. It wasn't true then either.

BTW, CW testing is abolished in the UK effective the 26th, i.e. allowing
for summer time, at 2300z tonight (the 25th), or 7pm EST. Less than 8
hours to go. I will try to get on at 7 to listen for G8, G6, G1, G7, M1
and 2E1 calls.

The following notice merges the Full A and Full B licences. I think there
is a similar notice merging the Intermediate A and Intermediate B
licences.

DEPARTMENT OF TRADE AND INDUSTRY

WIRELESS TELEGRAPHY ACT 1949

NOTICE OF VARIATION OF AMATEUR RADIO LICENCE (A) OR (B)

The Secretary of State hereby gives notice under section 1(4) and section
1E of the Wireless Telegraphy Act 1949 to holders of the Amateur Radio
Licence (A) or (B) that, with effect from 26 July 2003, the terms,
provisions and limitations of each licence shall be varied as follows:

1. In this notice the "Booklet" means the Amateur Radio Licence (A) or
(B) Terms, Provisions and Limitations Booklet BR68, the terms of which
form part of the Licence.

2. As from 26 July 2003, each licence shall be read and construed as if the reference in the
Licence to the Booklet were a reference to the Booklet containing the following changes.

(1) the heading of the Booklet shall be deleted and replaced by "Amateur Radio (Full) Licence Terms, Provisions and Limitations Booklet BR68"

(2) the words "These terms, provisions and limitations shall be read as an integral part of the Amateur Radio Licence (A) or (B)" appearing after the heading of the Booklet shall be deleted and replaced by the words "These terms, provisions and limitations shall be read as an integral part of the Amateur Radio (Full) Licence."

(3) sub-clause 2(2) of the Booklet shall be deleted

(4) sub-clause 2(3) of the Booklet shall be renumbered (2)2

(5) sub-clause 2(4) of the Booklet shall be renumbered (2)3

(6) sub-clause 2(5) of the Booklet shall be renumbered (2)4

(7) sub-clause 2(5A) of the Booklet shall be renumbered (2)5

(8) sub-clause 2(10)(a) of the Booklet shall be deleted and replaced by the following words "authorise any club member who holds an Amateur Radio (Full) Licence to use and supervise the operation of the station on his behalf under this Licence;"

(9) in sub-clause 3(1)(a), following the semicolon at the end of the clause, " and" shall be deleted and replaced with "or a Full Amateur Radio Examination Pass Certificate issued by or on behalf of the Secretary of State; or"

(10) sub-clause 3(1)b of the Booklet shall be deleted

(11) sub-clause 3(1)c of the Booklet shall be renumbered 3(1)b

(12) sub-clause 10(4) of the Booklet shall be deleted

(13) the heading of the Schedule to the Booklet shall be deleted and replaced by "Amateur Radio (Full) Licence Terms, Provisions and Limitations Booklet BR68"

(14) the following Schedule shall be substituted for the Schedule to the Booklet (the notes to the Schedule shall remain unchanged).

The Schedule to Terms, Provisions and Limitations Booklet BR68 (Amateur Radio (Full)
Licence)

Do you realise how many rule changes are necessary to implement that Jim?
17 pages of it is just the rule changes.

I get a completely different mental picture when Larry describes
someone with a Southern accent.

I wonder if Kim has a Southern accent.

None of the QRM/bad behaviour from no-coders ever materialised either, did it? All the people cited for QRM by the FCC are Extras, like I am.

I was watching the BBC news on PBS last night and they said something
about the 'close family relationship between the Bushes and the Bin
Ladens'. Does anyone one know what that's about? As far as I know the Bin
ladens are in construction and are/were based in Boston, Mass and in
Saudi. As opposed to Texas oilmen.

Kelly, that was a very nice presentation of an idea.

The survey could be accomplished via the ARRL web site, membership
required to log-in, at a total cost of about $40 for an hour of the
web programmer's time. The ARRL members who don't have web capability
can make a trip to the public library and vote. They should probably
get out more anyway.

SSB first showed up in the ham bands in 1934. AT&T had SSB running
around ten years before hams did. Next year will mark the 70th
anniversary of ham SSB. Gawd I love these "new, modern modes" like SSB
which make Morse such an artifact mode . . .

> second country after Switzerland, which already did it.

Actually the UK are making CW mandatory. All new amateurs from Dec 2003 will have to enter the hobby as foundation class, which requires a morse assessment which satisfies the pre WRC03 morse requirement (which never state a speed in wpm). The morse assessment requires the candidate to send a CW passage at any speed and to ask the assessor to slow down theoretically to 12 words per hour if necessary. It's also an "open book exam" i.e. they have access to a morse code table -.-. = C etc.

So far from abolishing the morse requirement - all new UK amateurs from Dec 2003 will have to sit the morse assessment at the lowest entry level. This does not apply to all former above 30Mhz (class B, CEPT class 2) who will get HF tomorrow (26th July 2003) without doing the morse assessment.

Why Dec 2003? well that is the next date for the Radio Amateurs Exam (scheduled twice a year - May and Dec) which allows you to go straight to Full (extra class) by sitting just one exam. After this "last" exam date (Dec 2004) all UK amateurs will have to sit three exams (and the morse assessment) to go Foundation Class then Intermediate (was Novice) then Full. Also after Dec 2004 the RAE will be no longer scheduled just twice a year but go "on-demand" and will be administrated by the Radio Society of Great Britain not the "City and Guilds" (a body responsible for NVQs across the UK) as before.

This guarantees that CW is never "forgotten" at least in the UK. As to be expected from the UK authorities a very diplomatic outcome.

It is expected that CEPT will merge Class 1 and 2 in September, up until then the issue of reciprocal licences is a pretty grey area. So those amateurs with HF access in the uk from passing a 5wpm or not even taking a morse test will be refused to operate HF in countries which still have the 12wpm test requirement.

> http://www.kilowatt-radio.org/

The above argument sucks... ANYONE who values their license "AGREES" to abide by the Rules and Regulations. YOUR argument that the FCC can't go checking all call signs and such is the same as this..... ALL Junior Operators of vehicles at - least here in PA, have to be off the street by a certain time of night and not much before day light can they get on the streets with a vehicle.. SO, will the cops stop EVERY car to see if they are a Junior Operator or NOT? NO, it is impractical.. But it STILL does NOT give you the authority to do as you damned well please. RULES AND LAWS are made to be adhered to.. YOU being a part of the lawless society are more a part of the problem than the solution. TO PROVOKE lawlessness IS a part of the problem. YOUR telling NO CODE techs to go on air without proper license - should the blind sheep follow, is as illegal as the CBers who are there as well. As I said, YOUR ARGUMENT SUCKS. PLUS, 5 wpm code is as lame as you can get. Once you learn the code, taking the test at 5 wpm will seem boring. It will be easier than you think..... THOUSANDS have passed it - myself INCLUDED.. I detect LAZINESS AND LAWLESSNESS. When YOU SIGN A 610 form, now a 605 for an Amateur License, OR any other form for an FCC license or permit, YOU "AGREE" to uphold the rules and laws. READ IT..... A man is only as good as his word, and if you agree to something then fall back on it, you are not a man of good deed. PLAIN AND SIMPLE..... Hell, why not provoke people to break all the laws... Allow anyone of any age, ability or back ground to drink, drive, possess firearms, use radios, whatever... See how long it takes before there is utter chaos. CRAZY, SIMPLY CRAZY..... ONE MORE THING..... when a person ACCEPTS the "agreement" to honor the "PRIVILEGES" earned via that license, they as a rule do NOT or SHOULD NOT talk to those NOT properly licensed. The ONLY exception being for preservation of life.

I knew all that Gareth, but of course most people on here won't.

73 de Alun, N3KIP

PS: I held both G8VUK (from passing the RAE) and G0VUK (obtained under the reciprocal agreement), but they have both lapsed. I intend to get G8VUK re-issued to me, but I am wondering whether to wait until the CEPT merge Class 1 and Class 2 (probably in September, as you say). I don't want to be G0VUK, particularly. I want to operate in Spain and in the Republic of Ireland with my FT-817 at some point (the UK as well, but obviously that's no problem).

BTW, as a British citizen my US licence entitles me to zero reciprocal privileges under CEPT, and isn't even valid in Canada under the bilateral agreement (albeit Industry Canada told me they don't care and I should just operate anyway as they wouldn't enforce the rules!).

2665. Germany Next?

I would not do what you're seeking even if there was absolutely no chance at all for the FCC to catch me. When I joined the Amateur Radio community, I made a commitment to abide by the rules and regulations associated with it. That commitment is not based on the FCC's enforcement ability, but my own sense of what is good for this community. I personally benefit from a community that has an equal commitment to abide by the rules and regulations. I therefore would not do anything to upset that situation.

I suspect you will eventually find that most other Technician license holders have a similar commitment to abide by the rules and regulation.

By the way, your statement that "all techs have voice privileges for 28.3-28.5 MHz" is simply not true - only a Technician Plus license holder (a Tech who has also passed the 5wpm code test) is allowed to operate on those frequencies.

Dwight Stewart (W5NET)

Source record: 72505

Keith,

Fortunately Jim, N2EY, supplied the information. Only the techs licensed before 1987 would get credit for element 3. Or are you suggesting there should be no written exam as well? I am well aware that amateur radio is not a do-all, end-all; rather it is a steppingstone to further learning. I'd be happy with written exams covering safety, some modest antenna theory, and ensuring the individual does know what his privileges are. Antennas with voltage peaks at the ends (dipoles) can be dangerous to people and animals if one (or both) ends are close enough to the ground for someone to contact them. There also is some concern as to strong e-fields surrounding antennas (especially on 10 meters and up). This should be of concern to neighbors with bedrooms on the second floor if the licensee has a beam on a short roof-mounted tower. Too many folks (such as yourself) think it is simply a case of code/no code. Frankly, I don't care about the code; I care about whether or not the licensee understands (or even cares) some of what is actually going on. If you want to go to the shoot-outs and expose your gonads to 20,000 watts erp, be my guest. Leave other folks (and *especially* children) out of it. BTW, whilst I have no problem with NCI (no code international), I *would* have a problem with NTI (no test international). The high end of the HF band (10, 11, 12) meters can expose folks to some nasty e-fields. With a typical dipole, you'd best be checking your controlled and uncontrolled zones if you're at 50 watts or more. That is pretty modest power. Yes, the broadcast stations run far more power, but AM broadcast is *much* lower in frequency and doesn't develop the e-field voltages like HF does. FM and television antennas are usually high on hills or skyscrapers *plus* have high towers to get the radiation away from the nearby ground. I remember the newly licensed tech who got killed putting up a tower. This hobby does have some dangers; if you aren't aware of them, you should study before getting a license. You do know that automobile drivers were not licensed at the start of the auto age, right? Do you think we should allow anyone to drive?

s97.301(e) reads:

For a station having a control operator who has been
granted an operator license of Novice Class or Technician
Class and who has received credit for proficiency in
telegraphy in accordance with the international

requirements.

(followed by frequency table)

The 'international requirements' (ITU-R s25.5) now read:

Administrations shall determine whether or not a person seeking a licence to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals.

There is no international requirement for proficiency in telegraphy, so arguably any Tech could operate on all the frequencies listed in the table. Be prepared to argue it in court, though!

Source record: 72509

Dave,

I made a somewhat similar observation when I mentioned that I had copied (100% perfect copy on a typewriter) 40 words per minute CW back when I was in the Navy. A lot of folks can't type 40 words per minute :) Also, I used to chat with Norm, VK2NP, in Brisbane Australia, for hours on end several times a week via teletype. It was about our 3rd qso when I had a mind cramp, stopped typing, then started with figs/letters/figs/letters, got the rhythm back and finished what I was saying. He almost fell out of his chair; he thought I was using the tape reader. Why use the tape? Amateur RTTY was only 60 words per minute and I could hit bursts of 92 words per minute on the 100 minute teletypes on the military circuits. Of course, I shouldn't be surprised today. Most people talk communications and they are talking 'cut and paste' on the internet, MP3 swapping on the internet, or yapping on the cell phone whilst driving all over the road :) Ah, the communications geniuses of today :)

(Re-posted)

According to recent posts in de.comm.ham, Germany will abolish the code test on the 6th of August, by a notice published in issue number 15 of the official journal to be published on the 30th of July. Apparently, this appeared in 'Funkamateur' magazine.

>

don't hold your breath on Spain. We've got a holiday home there and they have some very odd rules. e.g. no foreigners allowed on 6m even if they have a reciprocal, plus all the usual queuing at one office which is only open on Tuesday between 10 and 12:30. Then being told you need another piece of paper from the police station in another town etc etc etc. Biggest problem I have right now is our house didn't have an address !!! (which is quite common). It has one now - roughly translated as "Plot B outside town" Still love the culture though, quite charming really.

Sure you'll be able to get G8 but law says you cannot hold two licences of the same class so you'll have to lose the G0. Although you can pass it on to a living relative - son, daughter, wife? Or will it to anyone after you die.

Two down, about to become three.

Avalanches start with just a few grams of snow, then build under
gravity pull until there are tons of the stuff burying and destroying
all in its path.

All the ingrained self-importance of the procoders will be buried,
life-as-they-know-it destroyed in the avalanche of progress.

The change of S25.5 is like a "Weapon of Morse Destruction."

Ah, another old Artifact heard from...

Okay, old Morseman, please give us some exact cites of procoders who have "pushed the envelope of the amateur state of the art."

There's been over 300K licensed procoders around since 1912.

All I've heard about is a lot of posturing and bragging and self-promotion of self-described "greatness" of the procoders.

>AT&T had SSB running
>around ten years before hams did.

1928 on radio. See the "Collins Sideband book" for references.

The Dutch beat us Yanks on establishing regular commercial SSB for messaging.

"Sideband" was used earlier in wired communications, called "carrier" equiment for long-distance service using open-wire lines with four voice circuits per wire pair.

>Next year will mark the 70th
>anniversary of ham SSB. Gawd I love these "new, modern modes" like SSB
>which make Morse such an artifact mode . . .

Morse code *IS* an artifact, old Artifact.

Morse code was first used for commercial communications in 1844.

1844 is 159 years ago. Morse is over twice your age.

All the other communications services in the world have dropped morse code modes.

Morse code survives only in a part of amateurism, a virtual life enjoyed by those who wanted very much to be "pioneers" but never could due to being born so much later after morse code's birth.

If all you want to hear is morse signals, then "the bands are alive with the sound of music."

Personally, I find it very dull to sit around listening to a Continuous Wave carrier signal. Your mileage may vary.

ARRL represents LESS than a quarter of all licensed US radio
amateurs. By their own demographics, ARRL membership is
already slanted towards morsemanship.

For survival as an organization, ARRL must represent its member-
ship and thus there is a positive feedback to sustaining
morsemanship.

While that isn't "proof" quid pro quo, the inference is readily
apparant to anyone the least familiar with amateur radio.

ARRL spin is, of course, that they "represent all amateurs" but in
fact all they "represent" is a minority of all licensed amateurs.

I thought it was all about changing a LAW.

Obviously you think it all a matter of ethics and morality in a hobby
and recreation activity that has become your lifestyle?

>Get a dose of old fashioned America CAN DO and stop making excuses.

Let me clue you in, "old Elmer." I was born in, and raised, in that
"old fashioned America" and all us "old fashioned Americans"
didn't sit around making glorious pronouncements on how good we
were for following all the PAST CENTURIES' ways of doing things.

Most of us "old fashioned Americans" went ahead and IMPROVED
on things, our lives, and as much around us as we could. I think
that's how we managed to achieve all the prosperity and goods we
have and (most of us) use every day.

>362,073 + USA Amateurs have done it (not including tech pluses - have no
>figures on these) .

BFD, "old Elmer."

>Add up all your yes answers -- whether they are true or false -- THEY ARE
>ALL COPOUTS

Tsk, tsk, tsk. Sitting around pumping yourself as a role model of the
PAST CENTURY achievements instead of keeping up with the times
is the real "COPOUT."

>They are excuses that keep you from achieving your goals.

I never had any "excuse" to keep me from getting into and being a
part of radio electronics as a career.

Fifty years ago I was actively engaged in being part of HF military
communications for the Far East Command. At NO TIME did we
use morse modes nor did we ever have to use morse modes.
Throughout my working career and on into successful retirement,
I've never had to use any morse for any reason.

>Hope you don't do that with the rest of life's requirements.

I hope you've been able to keep up with technical progress that
happened in the 1900s. You know, the invention of the vacuum
tube that replaced the spark transmitter and galena crystal
receiver. And the forced migration of amateurs into the never-
never land of "below 200 meters [wavelength]."

[the centennial of the vacuum tube in radio is in 2004, a "Fleming
Valve" used as a detector]

No. I can cite that the most noteworthy advances in amateur HF
operations in the past 11-12 years have had little or nothing to do with
the ability to send and receive Morse Code. There's no reason to believe
that Morse Code will become more relevant in the future.

But if you wanna play dirty, I can also cite the wonderful operations
conducted by the code-fortified geniuses on 14.313 and several other HF
frequencies. And the cavalcade of Extra Class code-fetishists sanctioned
by the FCC for one violation or the other.

Would the author of the "Red Panties Song" have been able to compose and
sing that ditty on HF amateur frequencies without the exquisite sense of
rhythm only a thorough grounding in Morse Code can provide?

That is what I'm talking about. There is no longer a international requirement
for morse code so tech's can pick up the microphone and talk on 10 meters.
Here in America the FCC has to issue a warning notice, then a violation notice
and the person cited can then simply demand a hearing before a administrative
law judge. The ALJ is a pretty informal process and you just need to cite the
rules and they are not very strict when it comes to matters like these.
If you have a tech license and you operate outside your allowed bands like pop
up in the twenty meter band and keep it up they might come after you. But if
you meet the international requirements and stay in the HF TECH bands it is not
a violation of the rules and no one can verify if you have passed a horse and
buggy CW test any god damn way.

Keith,
What you don't seem to realize is that the 'rule'
you quoted is NOT law in this country. Until it has
been adopted, it's only a recomendation. So until
the new ITU recomendations are accepted by the US,
nothing has changed.
It doesn't matter if the 'no-code' rule WILL be
changed. Until it IS changed, there is NO change.
The ITU can't change US law, only the US government
can do that. It's okay to be happy about the proposed
code change, but don't be stupid...

> around ten years before hams did.

However, the AT&T operations were fixed-frequency LF systems (5000
meters). HF SSB was not used by the telephone folks until the '30s,
when about a half-dozen systems were put in service.

One of the reasons AT&T went with SSB for the LF transatlantic
telephone was antenna bandwidth. A 6 kHz wide AM channel at 60 kHz
involves an antenna bandwidth of 10%.

Hmmm...self-funded basement-workshop hams were less than 10 years
behind AT&T and its nearly-unlimited resources...

> Next year will mark the 70th
> anniversary of ham SSB. Gawd I love these "new, modern modes" like SSB
> which make Morse such an artifact mode . . .

Yup - and the theoretical background for SSB goes back even further.
Truly an antique mode.

Here's a timeline:

1910 - G.A. Cambell (of AT&T) develops LC filters suitable for SSB in
the LF
range.

1914 - G.R Eglund (of Western Electric) sketches geometric
relationship of
carrier and sidebands.

1915 - J.R Carson (of Western Electric) describes mathematical
foundation of
modulation and shows the theoretical advantages of SSB suppressed
carrier
transmission.

1915 - Carson files for patent on SSB.

1917 - Experimental 3 channel SSB telephone carrier system installed between
Maumee Ohio and South Bend, Indiana.

1918 - "Type A" SSB telephone carrier system installed between Pittsburgh PA
and Baltimore MD. Four channels using LSB between 5 and 25 kHz. Type A was the
first nonexperimental commercial use of SSB, and eventually seven Type A
systems were installed, remaining in service until the 1940s

1923 - Experimental one-way LSB 60 kHz radio system demonstrated between Rocky Point, L.I.,(New York), and London. Many of the components, including tubes, for this system were developed by Western Electric.

1927 - Regular transatlantic telephone service using 60 kHz LSB put in service.
Transmitting stations at Rocky Point and Rugby, England. Receiving stations at
Houlton, Maine and Cupar, Scotland. A three-minute call cost $75.

1932 - Carsons's SSB patent granted (17 years after filing).

1933 - Robert Moore, W6DEI, puts an amateur station on 75 meter LSB. This
station was later described in detail in R/9 magazine. It used LC filtering at
10 kHz to generate the SSB signal, followed by conversion to 200 kHz and 3950
kHz.

1934 - Several amateur SSB stations are in the air using rigs similar to
W6DEI's

1939 - 68 kHz channel added to Rocky Point system

1946 - R.B. Dome describes "Wide Band Phase Shift Networks" in Electronics
magazine.

1947 - O. G. "Mike" Villard, W6QYT, puts Stanford University amateur station
W6YX on 75 meter LSB with a phasing type transmitter using an audio phase
shift network developed from the Dome article.

The term "SSSC" (Single Sideband Suppressed Carrier) was frequently used in the early days.

This brings us to the point where SSB began to become common in amateur
communications. Numerous homebrew transmitters and receive adapters

were described in the amateur literature, followed by manufactured equipment. Early SSB efforts all used separate receivers and transmitters - the first SSB transceivers and matched-pair receiver/transmitter sets for the amateur market did not appear until the late 1950s (Cosmophone 35, Collins KWM-1 & KWM-2, Collins S-Line, etc.).

SSB operation concentrated on 75 and 20 meters in the post-WW2 years because:

- they were the most crowded 'phone allocations
- 40 had no 'phone band, and 15 wasn't a ham band, until the early 1950s.

The main reasons SSB was not more widely adopted by hams in the '30s were cost and complexity.

In those years (late '40s-early '50s), QST had a regular column called "On The Air With Single Sideband". There were "SSB Handbooks" for hams put out by several publishers. And there were gripes that QST was becoming "too technical" and that ARRL was "forcing SSB down hams' throats".

The more things change...

This is silly. Each country has it's own laws, and you are obliged
to follow them.

What has changed is that the treaty agreement whereby all countries
issuing amateur radio licenses are obliged to have a code test of some
sort for operating below 30MHz (or, was it a higher frequency?) is now

gone.

That means that each country no longer has to conform to that treaty agreement.

They can, if they so choose, to eliminate their law that requires code proficiency for amateurs operating in the HF bands.

But they are not obligated to do so.

Until a country changes it's law about this, everyone is obligated to follow those laws.

Just because the treaty agreement is gone does not mean that there is any more legality for someone who hasn't taken a code test to operate at HF. Two months ago, someone could have done it, and if caught they would face a certain process. If they do it today, and are caught, they face the same certain process. Nothing has changed on that account.

The 25.5 is automatically accepted by the US Government. The treaty has already been previously ratified. The change is administrative and it is not a new treaty.

A couple of deletions in about six to ten paragraphs. K2UNK and I did
a quick review a while back. That is, unless you want to renumber all
the elements and paragraphs.

There's a quicker way, though: FCC grants Element 1 credit to anyone
who has any class of amateur license, current or expired. One
sentence. Then rewrite Part 97 at leisure.

> 17 pages of it is just the rule changes.

Sounds like a good reason to leave it alone ;-)

Oooo...more stories from Olde Salts. <shrug>

I could cruise on a typewriter keyboard in 1951 at 60 WPM, burst
type to 90 WPM. Still can do that. Learned in middle school of
1947 (we called it "junior high" back then), using manual type-
writers with no markings on the keys. No "backspace" key then.

>Also, I used
>to chat with Norm, VK2NP, in Brisbane Australia, for hours on end several

>chair; he thought I was using the tape reader. Why use the tape? Amateur
>RTTY was only 60 words per minute and I could hit bursts of 92 words per
>minute on the 100 minute teletypes on the military circuits.

When I was in the US Army there were no "100 WPM" teleprinters,
only the old pre-WW2 60 WPM machines. No problem to practiced
touch-typists. When I was an operating shift leader, I used to send
the confirmation list of frequencies by circuits to control (once per
shift) using manual keyboard instead of the reader...could feel the
mechanism lock-out hit back when I tried to go faster than 60.

But, none of the 36 transmitters at ADA were sending morse back in
the early 1950s. [later up to 43 transmitters at the new site] All of
the communications trans-Pacific was done via TTY, Voice, or (rarely)
FAX. No need for practiced morsemen although we had a few (all of
three at a maximum at one time).

The "torn tape" TTY relay used p-tape on purpose. One TTY relay
guy would normally handle 8 to 12 circuits at a time, plenty of time
to yank off an incoming tape to go to another circuit or to load and
start outgoing tapes. ADA handled over 200K messages a month in
1955. Just couldn't do that with manual morsemen...would have
taken a whole other battalion of personnel just to do that in morse.

>Of course, I
>shouldn't be surprised today. Most people talk communications and they are
>talking 'cut and paste' on the internet, MP3 swapping on the internet, or
>yapping on the cell phone whilst driving all over the road :) Ah, the

>communications geniuses of today :)

Are you saying "cut and paste" in general is a "bad" thing? I found that the modern word processor program is an excellent tool for writing, re-writing, and general polishing, greatly aided by the "cut and paste" features inherent in each package.

Oh, you must mean that using a computer to compose words is a "bad" thing using newfangled contraptions? You prefer "longhand" writing using real ink on real paper? That was a common tool back in 1844 when morse code debuted as a communications mode.

Tsk, tsk. I was on ARPANET in 1978 using a video terminal. Used old-fashioned 300 Baud modems. Five years earlier (1973) I was on a corporate network using 100 WPM teleprinters to connect to the central corporate mainframes.

I can still do handwriting as good as my physician (who just hit 33)... which isn't saying much for that skill. :-)

Of what possible use in amateur radio is manual typewriting? I see NO need of a test in that at all and I've been typing longer than being involved in radio.

It's better that amateurs learn a bit more technology than Ohm's Law in this modern age...not emulation of the "necessary manual skills in radio" (morse code) for my generation's daddies of pre-WW2 times.

Read the regulation. The regulation indicates that according to international
morse code requirements the CW requirement is required. Well the international
regulations do not require a morse code proficiency for HF access.
97.301(e)
I guess it all boils down to what "IS IS".

BTW, what do you care about US regs if you live in Canada?

2699. The effective date for July 5

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-25 20:53:06 UTC
From: Keith <kilowattradio_spam@earthlink.net>
Message-ID: <bfs5fm0e7o@enews4.newsguy.com>
Source record: 72536

The changed language of S25.5 permits national administrations to exercise their own discretion on whether or not to maintain Morse testing in their national rules. The effect of the new language is essentially exactly the same as if S25.5 had been completely suppressed (eliminated), since administrations are always free to enact national rules that are more restrictive than, but not more liberal than, the ITU Radio Regulations.

This change, which became effective July 05, 2003 (the day after the close of the WRC) is expected to result in a number of administrations moving swiftly to eliminate Morse test requirements from their national regulations.

Len,

I didn't want to mention the cause of my complaint of cut and paste. One of our college graduates at work told me (why would he lie about this?) he did his thesis using cut and paste from other papers on the internet. Perhaps you missed the point; at some point in time, someone has to put the *original* information into the computer and on the internet. This seems to be the point you missed. Sure, I did 90 on a 100 wpm teletype. Perhaps you mistakenly assume that I can't do 30 on a keyboard? (Har har-de-har!). Cut and paste is most certainly *very* useful. I just don't see using cut and paste to pass someone else's work off as your own.

As far as testing, I have a concern that a lot of folks don't want any testing. Sure, enjoy it when someone has a shoot-out on 11 meters (or 10) running 10,000 or 20,000 watts next door to you. Perhaps I misunderstand your last statement "it's better that amateurs learn a bit more technology than Ohm's law". The lab I may be moving into has an interesting power supply ... 30,000 volts at 20 ma. Sure, why bother to learn interesting things concerning relationships between voltage, resistance, and current. The nice thing about that is, the dang fool who doesn't care and gets into that lab may do us a favor and remove his genes from the gene pool. As far as typewriting, might I gently enquire as to how you managed to post your response to my post? Are you using a Windows based keyboard and clicking your mouse over the letters? (how modern!). Or, perhaps, you are using a most modern keyboard - Dang! That sure looks like a ... um ... gee, the layout looks very much like those old typewriters. Frankly, I'm not worried about code or typing - I'd like to see some safety issues and relevant theory covered, but perhaps that is asking too much. Why is it when we mention typing, everyone assumes an old fashioned typewriter. Typing is typing, whether on a computer or an old fashioned linotype machine. I'd love to see all of these lovely 'modern' folks get the information into the computer in the first place without copying it from someone else. I've helped some of those younger folks ... "the mouse is f****d up". Pick his hand up off the mouse, turn the mouse 180 degrees so the cable comes off of the back end rather than towards the front, and put his hand back on the mouse. Yep, I love you smart, modern, young folks! BWAAaahahahah!

73 from Rochester, NY
Jim AA2QA
ps - better put the guy with a mouse problem on an emergency keyboard circuit. Could prove interesting, especially since he could hunt-and-peck perhaps 15 words per minute.

>Houlton, Maine and Cupar, Scotland. A three-minute call cost $75.

55 KHz.

>1932 - Carsons's SSB patent granted (17 years after filing).

John Carson's patent (1,449,382) was granted in 1923, not 1932.

Tsk, tsk...off by 9 whole years.

>1933 - Robert Moore, W6DEI, puts an amateur station on 75 meter LSB. This
>station was later described in detail in R/9 magazine. It used LC filtering at
>10 kHz to generate the SSB signal, followed by conversion to 200 kHz and 3950
>kHz.

KHz, not "kHz." Are you an engineer or not? Engineers should use
correct terminology for physical terms.

>1934 - Several amateur SSB stations are in the air using rigs similar to
>W6DEI's

Between 1933 and 1934 the Dutch established a regular "shortwave"
(HF) radio link between the Netherlands and the Netherlands Antilles
using what would come to be the standard in service - four voice
channels in a 12 KHz sideband via landline carrier equipment
frequency multiplexing, the "outer" two generally handling 8 to 12
TTY circuits, also frequency-multiplexed by landline carrier equipment.

The American - British link across the Atlantic went to HF by 1935.

>1939 - 68 kHz channel added to Rocky Point system

By 1939 both the US government and US military were outfitting for
HF "commercial" SSB (12 KHz bandwidth, 4 voice channel) as fast
as they could get equipment. They already has some 1934 design
SSB transmitters from Western Electric in use. ADA started out
with three of them, were replaced with post-war models as soon as
available in the early 1950s.

>1946 - R.B. Dome describes "Wide Band Phase Shift Networks" in
>Electronics magazine.

December, 1946.

>1947 - O. G. "Mike" Villard, W6QYT, puts Stanford University amateur station
>W6YX on 75 meter LSB with a phasing type transmitter using an audio phase
>shift network developed from the Dome article.

1952 - Western Electric's LD-T2 SSB transmitter was available to all
buyers...4 KW PEP, automatic servo motor tuning (of 12 different
stages) at 10 preset frequencies. All amplifier stages (individually
shielded) were Class A except the final amplifier running Class AB.
Half-minute QSY, easy, fast. ADA had four of them.

>The term "SSSC" (Single Sideband Suppressed Carrier) was frequently
>used in the early days.

Not in commercial or military radio services of 1952...it was just
"sideband" or "single sideband" in both written and spoken language
in the USA and US forces abroad.

>This brings us to the point where SSB began to become common in amateur
>communications. Numerous homebrew transmitters and receive adapters
>were described in the amateur literature, followed by manufactured
>equipment. Early SSB efforts all used separate receivers and
>transmitters - the first SSB transceivers and matched-pair
>receiver/transmitter sets for the amateur market did not appear until
>the late 1950s (Cosmophone 35, Collins KWM-1 & KWM-2, Collins S-Line,
>etc.).

Ever operate an AN/FRC-93?

I don't think you've ever operated an AN/ARC-58 or AN/ARC-65. Those
are airborne transceivers, single channel units primarily for USAF.

All of the amateur radio SSB equipment, from day one, was SINGLE
channel.

>SSB operation concentrated on 75 and 20 meters in the post-WW2 years
>because:
>
>- they were the most crowded 'phone allocations
>- 40 had no 'phone band, and 15 wasn't a ham band, until the early
>1950s.
>
>The main reasons SSB was not more widely adopted by hams in the '30s
>were cost and complexity.

...and "most hams" didn't know squat about real radio theory so they
went back to the usual beeping, yakking, and whining. :-)

Except in the amateur 11 meter band...which they would lose in 1958
and never stop whining about it for the next 45 years! :-).

>In those years (late '40s-early '50s), QST had a regular column called
>"On The Air With Single Sideband". There were "SSB Handbooks" for hams
>put out by several publishers. And there were gripes that QST was
>becoming "too technical" and that ARRL was "forcing SSB down hams'
>throats".

Well, you were there, right? Poor baby...must have been difficult.

>The more things change...

The more things change the more YOU want to keep the old things.

You've made a number of ERRORS in your little history missive.
You've been corrected. Try to accept that in good grace...not your
usual spiteful attitude as a procoder knowitall.

If the FCC decided to drop CW requirement totally they could still say the
TECHNICIAN is a VHF ONLY LICENSE. Or the could say its a VHF and 28.3-28.5
voice ONLY LICENSE.

In anycase I highly doubt the FCC will give the Technician ticket an
equivilant to a General UNLESS the Tech was issued prior to 1986 when the
WRITTEN was the same for Tech and General.

Get over it Keith.

Thats not the point Keith.

Item one there is no "RIGHT" to the ten meter sub-band to a Technician licensee. It is a PRIVILIDGE. Turn your license over and read that part.

Item two by doing such a thing only proves what us 'coders' have said over and over. Its all about a bunch of CB outlaws that are trying to destroy Amateur Radio by bringing the lawless tactics and attituded to the ARS.

Come to think of it...Go ahead boneheads. Show the FCC we were right.

While not a violation of the international treaty, it would be a violation of the current FCC rules. They are quite clear that Techs (at this time) must have passed a code test to use HF. Keep in mind that the international treaty did not abolish the requirement altogether but simply let each country set its own requirements of any where from no-code to whatever the country wished. Our FCC rules have not yet changed so a codeless tech operating HF is in violation.

No Keith it means that a person that passed the Tech written and the NOVICE
written and that means the 5wpm cw test is allowed on the ten meter
segement.

A Tech written authorizes VHF and above ONLY.

Just dropping the CW test is not all that is required to be allowed on HF.
(This according to FCC rules).

Do you get it now?

First off no one is forcing you to do CW. If you don't want to do it...then
dont. On the other hand many of you non cw types are forcing the rest of us
to lose CW. So who is doing what to whom???

As for the music and CW. Correct. Makes it much easier. Its the rhythm
that does it.

Tap your foot to a 4 x 1 cadence. Then tap your finger on the desk in
sequence with it. Tape it three times and you have a "S" tape it four
times you have a "H" tape it five times you have a "5".

Now do this. Keeping the foot going. Send a "V" di di dit dah.
Keep in cadence. See the rhythm ? great ain't it ?

Only Techs with HF and Tech Plusses (i.e. Techs who have passed the code
under one licensing structure or another) have voice privileges on 10
meters. It would be very easy for the FCC to send out NALs and require that
the suspect people send the FCC a copy of their documentation. The FCC
doesn't have to prove anything. They can place the burden of proof on the

Techs.

Simple the same people too lazy to learn the code are too lazy to become politically active. They want to achieve their results simply by whining about it and getting someone else to do the work.

I was not aware that the ARRL was responsible for keeping the code
requirement. All this time I thought it was the FCC. Dang....thanks for
the correction Keith.

You are not on track and are unable to follow a discussion. I am talking about a technician class licensee having tech class HF privileges without the code test. I'm not talking about making them to general.

Don't worry this is going to be reviewed legally very soon.

NO! This is what the rules say:

s97.301(e) reads:
>
> For a station having a control operator who has been
> granted an operator license of Novice Class or Technician
> Class and who has received credit for proficiency in
> telegraphy in accordance with the international requirements.
> ^^
> (followed by frequency table)
>

Now we have the new regs from WRC that are NOW in effect. They require no morse code test except set down by the administration so a tech licensee should be in compliance with the requirement set down in 97.301(e) There is no requirement for morse code test except for the requirement by the international morse code requirements.

> The 'international requirements' (ITU-R s25.5) now read:
>
> Administrations shall determine whether or not a person seeking a licence
> to operate an amateur station shall demonstrate the ability to send and
> receive texts in Morse code signals.
>

The ARRL tried to pull a fast one, but the way the FCC rules are written it appears that it doesn't hold water with current regulations as set down by the FCC.

Don't worry I'm going to get real legal advice on this.

1. FCC requires compliance with international morse code regulation.
2. The international morse code regulation is changed to something completely different and no longer has any morse code proficiency requirement except what the administration of that country requires.
3. The FCC, the administration of the USA, only requires the tech licensee to comply with the morse code proficiency requirements required by international requirements.
4. The international requirements have no requirement to know morse code.

This could be a legal loop hole.

By your interpretation, every ham in the world can start operating
on HF, no matter what their license restricts them to, merely because
the international agreement on this matter has been rescinded. Your false
interpretation would therefore apply to all countries. Besides, you
posted in newsgroups that are read by people in many countries, so
why shouldn't I comment.

The international agreement does not set the rules. While except for
Japan with their low power license I can't think of any country that
did not respect the treaty agreement, there wasn't much to keep countries
from not honoring the treaty, other than on a diplomatic level. If
someone operated on HF without passing a code test, they weren't
prosecuted by an international body, they were pursued by their
own country's enforcement body, which also set the rules that
the person was violating. Each country had to put in place rules that
reflect the agreement.

Those rules are still in effect, until they are changed.

"We had to put these rules in place because we honor the international
treaty."

That's a big difference from "You have to know morse code or else the
international boogy man will come down and toss you in jail".

The first is about implementing rules that honor an international agreement.
The second is some international law that you must respect directly.

Find some other section of your rules, and you're bound to find something
that tells you you can't operate HF with certain classes of licenses.
That's the rule that is in control. It's absolute, and not dependent
on some international treaty.

When I was a kid, there was no license here in Canada that let someone
operate without taking a code test. Some likely argued that the code
test was there because of the international agreement, but the rules
were quite clear, you couldn't operate unless you took a test, and part
of that test was a code test. Back in 1978, there was a code-free
license here, but only useable at 220MHz and up, and had a lot of
digital questions. The rules were clear; if you got that license
you could only operate on those VHF frequencies. Back in 1990, there was
restructuring, and there was a license which did not require a code test;
but it was also clear in setting out where you could operate.

For that matter, the US Technician license originally was VHF and UHF
only, yet there was a code test. Your FCC decided it was a necessary
requirement, even if the treaty did not require it in that case. It
was only in more recent decades, when 10meters was added, that the treaty
required a code test. Take away the code test, and the FCC limited
such licenses to VHF and above.

No, the rules are what counts, not some preamble.

The FCC rules are based on that international requirement.
Now the FCC could have said you must pass the 5 wpm test to operate on HF
frequencies. But they said based on the international proficiency requirements
a tech can operate on HF.

Today there are no international proficiency requirements for morse code.

This one was such an obvious troll it was pitiful, but I'l bite anyway, just in case someone's on the verge of letting their emotions overcome their common sense.

On Thu, 24 Jul 2003 01:54:43 -0700, morse@code.is.dead wrote:

> Let the FCC know that they can no longer keep you from your right to use the
>ten meter band allocation if you are a technician licensee.

What "right" is that? Freedom of speech, freedom of the press, and the ability to vote are rights. The use of then ten meter band - or any other part of the amateur radio allocations - is a privilege. There is a difference: Rights are due all Americans regardless of race, creed, color, etc. Privileges are due only to those who've earned them.

>The international
>requirement for morse code has been removed and there is no such thing as a
>technician plus license.

Nevertheless, Technician class licensees who have credit for Element 1 receive the same HF privileges as the former Tech+ license granted - which are the same HF privileges the former Novice license granted. No Element 1 credit, no HF privileges - yet. That's subject to change now that WARC changed the international requirement.

> You don't have to use your identity,

Meaning what...go on the air where you have no privileges and fail to identify your station? Yeah, right. You expect others to do that, yet you yourself are so chickenshit that you have to post anonymously.

>but no code technicians need to finally
>speak out to the FCC they will no longer be oppressed by rules designed for the
>stone age of electronic technology.

Then file a petition with the FCC to have the testing requirements changed to reflect the changes WARC implemented in the international requirements.

> Get on the air at 6pm local time on August 1st or if the band is open any time
>to make contacts in the 28.300-28.500 MHz that is allocated to technicians for
>voice. Or if you have a computer you can use the allocated technician CW bands
>to send and receive morse code.

Unless you have Element 1 credit, this is contrary to current FCC regulations. The licensing requirements are THIS --> <-- close to being changed in your favor. Any no-code Tech who jeopardizes his or

her license by taking your "advice" is a bigger fool than you are.

> Currently the FCC and ARRL want to drag this morse code requirement out for
>one or two years while they put BPL and other technology on the fast track.

...and so instead of working through the system and seeing if you can
shorten it to six months, you expect people to risk losing their
licenses entirely so that they never get on HF? Well, one thing's for
sure, you ain't Mensa material.

> I will be on the air

I hope you have a license that grants you privileges to be on the air
wherever you operate

>and I hope 10,000 or more no code technicians will join me.

I hope they won't.

>I guess Hollingsworth will have to require 10,000 people to turn in their CW
>proficiency certificate if YOU will join us.

To hell with that...he should have you turn in your license instead,
and then he should run it through the office shredder.

> The morse code game is over and I'm not driving 55 when the speed limit is
>really 70 mph and the government hasn't changed the signs yet.

Trouble with that is, to continue your analogy, the speed limit is
still 55. When it becomes 70 the signs will get changed. That hasn't
happened yet.

>Just go by the limitation of your technician license

...which means no HF privileges unless you have Element 1 credit...

>and don't go overboard,

If operating outside the privileges your license grants you isn't
going overboard, I'm afraid to ask what is.

>we want to show
>that just because we didn't pass some dinosaur morse code test that we are bad
>operators.

And so far, nobody's said that you are. However, once you deliberately
overstep the operating authority granted to you by your license, then
you will not only be a bad operator, but also a pirate.

> Get on 28.306 USB at 6 PM local time to talk with other no code tech's that
>are protesting the FCC and ARRL stupidity.

...by demonstrating gross stupidity on your own part? That's
original...since when do two wrongs make a right? If you're dumb
enough to risk losing your license this close to the end of code
testing, I hope they throw the book at you - huge fine, all your

equipment confiscated, the whole nine yards.

I have no doubt that there are people out there who have waited years and years to get on HF without taking a code test. After all that waiting, it would be really tragic for them to lose their licenses on the eve of finally getting what they've been waiting all that time for. Major dumb move...I can only hope the rest of the Technicians without code credit have more sense than you're displaying here.

As of July 15, 2003, there were 257,319 Technician class licensees,
some of whom already do have the right to use parts of the HF bands.
No way of telling how many, unfortunately...basically anyone who was a
Tech+ and has renewed now has a license that says Technician on it,
but they retain their HF privileges, and anyone who upgraded from
Novice to Technician also retains their HF privileges.

>Hams in Europe have
>already been allowed access to the HF bands and America should take the lead
>and let it's citizens enjoy HF amateur radio as soon as possible.

America already lets it citizens enjoy HF amateur radio. In addition
to the Techs with HF privileges, there are also (as of July 15, 2003)
33,662 Novices, 67,055 Tech Plus licensees who haven't had to renew
yet (not that it matters since they keep their HF privileges anyway),
141,180 other Generals besides me, 83,239 holders of an Advanced
license, and 104,301 Extras.

>(although I'm not sure why not).

The U.S. is already a signatory to the ITU treaty. That may have
something to do with it. Besies that, though, I'm sure there has been
at least one treaty that was actually submitted to the Senate for
ratification that the Senate didn't ratify, but the executive branch
implemented the terms of the treaty anyway. This was not viewed as a
breach of checks and balances, but as the U.S. complying voluntarily
with the terms of the treaty as a matter of administration policy even
though as a non-signatory it was not required to do so.

>My XYL (a no-coder) has asked me to draft a petition to the FCC. Since it

>one before.

You might try contacting Alan Dixon, N2HOE. He filed a petition awhile
back relative to removing the 150-mile distance limit for contacts in
the 11-meter Citizens' Band Radio Service (Part 95), so he is familiar
with the procedure. His petition was rejected, not because he failed
to follow proper procedure, but rather because FCC decided the action
he petitioned for was not warranted.

His column in Popular Communications does not show an e-mail address, but you could probably contact him through the magazine, or run his call through QRZ and see if there's a valid e-mail addy listed. I'm composing this offline, on a laptop that's nowhere near an Internet connection right now, or I'd try to run down hos e-mail addy myself for you.

That's because no mere squelch circuit could realistically be expected
to cope with your noise level. For dealing with you, an attenuator and
some serious filtering are required.

What? "many of you non cw types are forcing the rest of us
to lose CW"

If the CW requirement is gone you can still do CW.

Who is forcing who? Is someone being forced when CW is a
requirement, or is someone being forced when someone else
believes that the CW requirement should be dropped?

>paste to pass someone else's work off as your own.

I regularly do "cut and paste" from the Internet as part of my writing.
The difference between me and the common PLAGIARIST is that
I give credit for the source in my writing. It's a helluvalot easier than
having to travel 10 miles to any of three technical libraries which
might not have what references I'm looking for.

I'm a firm believer in Title 17 and its Public Law 94-553 and later
amendments. [copyrights] Avoids plagiarism lawsuits and stuff.

>As far as testing, I have a concern that a lot of folks don't want any
>testing. Sure, enjoy it when someone has a shoot-out on 11 meters (or 10)
>running 10,000 or 20,000 watts next door to you.

I lived and worked 7 months *IN* an antenna field covering about 2 miles
by 1 mile (had been a small airfield) with up to 43 transmitters feeding
the antennas between 1 and 40 KW RF each. Makes listening to SW
or MF AM BC during free time a tad difficult...:-)

The electric power generation (self-contained on station) could handle
600 KWe and I figure about 200 KW of RF was being tossed in many
directions. Our barrack was at one corner of the field, transmitters in
the middle.

I once went out with a lady who had an apartment just two blocks from
KMPC, an MF AM BC station. KMPC regularly operated with 50 KW
RF output, maximum legal output for Mass Media services on MF BC.

I've never seen any substantive proof of any CBer running 10 gallons
or more. [fish story that]

>Perhaps I misunderstand
>your last statement "it's better that amateurs learn a bit more technology
>than Ohm's law".

I was referring to "what is behind the front panel" of a radio, the general principles of receivers, transmitters, frequency control, and the how and why of matching to an antenna. Basic stuff of REAL communications, especially for test/calibration/finding-out-if-it-works-maybe-bad-to-send-back-to-the-factory-for-fixing.

I've gotten very tired long ago of so many amateurs claiming greatness in radio and then showing they hadn't any knowledge of what went on behind the front panel. They can spout off hours of memorized sales phrases and quotes from Yaecomwood ads as if they knew what it meant but all they demonstrated was mnemonic skills. :-)

In the late 1970s I decided to upgrade my communications receiver thing and was looking around the HRO then in Van Nuys CA. I asked (serially) three clerks in the HRO if they knew anything about how the Icom R-70 could have a PLL using 1 KHz reference yet still have 10 Hz tuning increments. None of them knew what I was talking about. I called Icom America from work and managed an instruction manual copy, got it in the mail; Yaesu and Kenwood offices didn't return my call. I bought the R-70 from HRO, showed the store folks (all hams) what and how Icom did it (cleverly, I thought) and just got incredulous looks. I'm not sure they could understand block diagrams, let alone schematics.

>The lab I may be moving into has an interesting power
>supply ... 30,000 volts at 20 ma.

In 1960 I had the task of building a replica of a 15 KV, 50 mA supply for an STL Physics Research lab project. [750 W equivalent] Corona I didn't believe! :-) Used up three small bottles of GC corona dope.

> Sure, why bother to learn interesting
>things concerning relationships between voltage, resistance, and current.
>The nice thing about that is, the dang fool who doesn't care and gets into
>that lab may do us a favor and remove his genes from the gene pool.

For RF sources, one needs MORE than DC law knowledge.

At age 21 I got broken into operating a Press Wireless 15 KW beast whose 350 V bias supply was still hot when the side door was open for tank link changing on QSYs. One of the guys on another shift got his sleeve caught in something and was severely burned on his fore-arm, required surgery to put it right. Danger ALWAYS lurks around high power anything.

>As far
>as typewriting, might I gently enquire as to how you managed to post your
>response to my post? Are you using a Windows based keyboard and clicking
>your mouse over the letters? (how modern!). Or, perhaps, you are using a
>most modern keyboard - Dang! That sure looks like a ... um ... gee, the
>layout looks very much like those old typewriters.

The letters are still in the "QWERTY" arrangement on my keyboard as they were on my middle school's class typewriters...except my

computer keyboard has the keys labeled. Our typing class' writers
had no marking on the keys. :-)

>Frankly, I'm not worried
>about code or typing - I'd like to see some safety issues and relevant
>theory covered, but perhaps that is asking too much.

Since the tests and test materials are all public, the only real "safety"
issues I see are all the "RF biohazard" impositions shoved on the FCC
by Congress...the ones with the terribly-dangerous, almost-fatal-to-
think-about-over-50-Watt RF RADIATION LEVELS!!! :-)

Heh...I know of several hundred guys in the service who cycled through
a year's service in 100 to 200 KW RF antenna fields at HF in the US
Army and Air Force. Human beans are hardier than some extremists
in the public (who influenced Congress) believe.

No written test is going to keep someone from making a fatal mistake
while in a high place anymore than driver tests stop road accidents.

>Why is it when we
>mention typing, everyone assumes an old fashioned typewriter. Typing is
>typing, whether on a computer or an old fashioned linotype machine.

Nooo...not quite right. a Linotype automatic type-setter machine has
a different keyboard arrangement. One row is "ETAOINSHRDLU"
as opposed to the conventional "QWERTYUIOP." An "office" type
typist would produce very funny type slugs on a real Linotype. :-)

I got training in touch-typing rather long before there was such things
as desktop computers, even before video terminals. Hundreds of
thousands did. To me, a "typewriter" is any instrument that produces
legible text not requiring direct manual writing by pen or pencil

>I'd
>love to see all of these lovely 'modern' folks get the information into the
>computer in the first place without copying it from someone else.

I've personally seen dozens do it no problem at all.

It used to be a lot worse at the DOS level before Windows or the
the GUI concept developed by Xerox' PARC. But that "worseness"
was due to early shorthand-style jargon commands necessitated
by way-insufficient internal memory.

I totally love the speed, efficiency, and capability of modern word-
processors and their ability to produce print-ready copy in my choice
of type styles (over 200 in my computer, had to cut out about 100
more as too freaky). Remember, I'm one of those from prehistory
back when "typing" meant on a solely mechanical gizmo that took
paper directly, not through a separate "printer." Training on a type-
writer that had NO key markings...[learn or die, very Darwin...:-)]

What gets me is all this "magic" and "majesty" and "need" for a
159 year old PRIMITIVE language coding tool in a hobby/recreation
activity involving radio that requires federal licensing! Stupid!

Yes, having the ability to send/receive at 40 WPM plus in morse IS
a definite accomplishment for an individual. No doubt.

In the 1930s morsemanship skills were in demand in radio. Trouble
is, this is NOT the 1930s, it is in the new millennium where one
residence out of three in the USA has some kind of computer. One
residence out of five in the USA has some kind of Internet access.
There are 150 million cellular telephones in the USA now.

A whole half century ago I was doing HF communications without
ever using or needing to know morse code. A half century later I
still find some over-inflated, self-professed "masters of radio" saying
everyone "must" have morsemanship to operate on HF amateur
bands. That does not compute, that does not compose logically on
a manual typewriter. That "need" is so much fetilizer base.

>I've
>helped some of those younger folks ... "the mouse is f****d up". Pick his
>hand up off the mouse, turn the mouse 180 degrees so the cable comes off of
>the back end rather than towards the front, and put his hand back on the
>mouse. Yep, I love you smart, modern, young folks! BWAAaahahahah!

I've never seen ANY young folks acting so stupidly. Not even any old
folks or middle-age folks. The Xerox PARC "mouse" concept is very
intuitive even to first timers (I was one of at least 3 dozen at a Valley
store here when the Apple Macintosh made its debut...not a one of us
had any problems with the mouse).

I started personal computing back in 1976, back before the first Apple
computers hit the big time market. Working out source code for
microprocessors was a helluva lot more interesting, entertaining and
challenging than trying a third attempt to keep morse code in the head.

What I have personally experienced is some old hams jumping up and
down, cussing and whining about everyone "obeying the law and taking
a morse test!!!" Your example was dumb. The old procoder jumping
up and down in rage demanding obediance is dumberer...in my opinion.

The old procoder's outrage will be manifest until the last key is removed
from their cold, dead fingers. Screwm.

Len,

You are wrong in my example of the younger guy with the mouse. It happened. Really. You and I are closer than you think. As I stated, I am not worried over Morse. As far as the high powered HF, most of the HF was nowhere near 30 MHz. You know that and don't try and tell me otherwise. When you talk volts per meter, there is a difference between 30 and 15 MHz and a much bigger difference between 15 MHz and 1.5 MHz (near the top end of the AM broadcast band). Please do us both a favor and don't assume that I don't know what I'm talking about. That will save us both a lot of time (and typing!) :)

Why don't petition the FCC to ask them if techs can now
use the novice portion of 10 meters. When the official
R&O comes out stating that I can, I will be on as soon
as it's legal, not one minute sooner, unless I learn CW.

I'm going out to enjoy a Friday night. Hamfest on Sunday.
Troll your heart out, Keith from Newsguy, that removed
his email from his killerwatt-radio web site, put all kinds
of strange sh!t in his meta-tags, and just basically puts
the same BS on his web page as you see here. Save yourself
a trip, folks, don't click his link. His attitude matches
that of Stew's!!!

I don't need to petition the FCC. I need a legal opinion from it. Of course,
time will tell where this goes.
Discussing and protesting rules is not ignoring them.

your premise is flawed because you do not take into
consideration the entirety of ham radio. ham radio is
what it is because it is filled with a rich texture of history
and experience. Like the Kentucky Derby and
Wimbleton , for example. There are plenty of horse
races and tennis tournaments , but only one " ham radio.
(is this too complicated for you ??) The first attempt at a
codeless radio license resulted in Citizen's Band. Popular
in the '70s but wasted away to what it is now ... and include
the newer citizen's bands into this too. This , plus many people
are frequently too LAZY (or poorly motivated < yourself perhaps >
to continue the rich tradition of morse in HR) and eliminating the
morse requirement would " definitely " force the eventual end of
CW on the bands.
There are PLENTY of non morse opportunities , currently , in ham
radio (too many for my tastes) .... taking away the morse
requirement completely , would mean the end of the rich tradition of
hamming and rob everyone (that comes after) of the history and rich
experiences that morse can bring. (ever heard of " wolf hung ???
I doubt it ...!! understanding the spirit of woulf hung resolves it
all)
Ham radio without morse is NOT REAL hamradio ... it's " radio "
minus it's rich history and texture of life.

there I said that ......

dusty
k4nlz

morse is joyous and something EVERY serious ham radio enthusiast
should learn the love (of radio) with-in . the ethereal bliss of
morse communication " cannot " be merely spoken of , it must be "
personally " (internally) experienced to be fully appreciated.
traditional " ham radio " is NOT really ham radio without it. if
you have experienced this bliss personally , you understand
completely , if NOT ... you do not fully appreciate ALL that ham
radio offers. either you " have , or you are still not " there "
yet. there is FAR more to morse than many people appreciate or
understand ... I highly recommend that you experience it for yourself,
completely , ... then YOU will understand also. (and be MUCH
richer for the experience)

>frequencies. And the cavalcade of Extra Class code-fetishists sanctioned
>by the FCC for one violation or the other.

Sure. But what mode were they using when they broke those rules?

Recently a ham in CA was cited by the FCC for sending false distress signals on
two marine VHF frequencies using a modified FT-2500M. False distress signals
used to be one of the worst radio violations a person could be accused of. The
ham in question wasn't an Extra....

If you look at the enforcement actions of the FCC against hams, you'll see that
the vast majority of them that involve operational (as opposed to technical)
violations are committed with voice modes. You'll have to look long and hard to
find even one against hams using CW in the CW/data parts of the bands.

So maybe it's not the code TEST but code USE that is the important factor.

You'll also see that all license classes are represented, too.
>
>Would the author of the "Red Panties Song" have been able to compose and

Maybe. Never heard that song, anyway. One thing I do know, though, is that in
36 years of ham operation I've not heard that sort of thing on CW.

Whoa!!!

Per the FCC website:

"Technician
The privileges of a Technician Class operator license include operating stations while transmitting on channels in any of 17 frequency bands above 50 MHz with up to 1,500 watts of power. To pass the Technician Class examination, at least 26 questions from a 35 question written examination must be answered correctly. A Technician Class licensee who also has passed a 5 words-per-minute (wpm) telegraphy examination receives privileges in four long distance shortwave bands in the HF range (3-30 MHz) (Refer to Section 97.301)."

So, Techs don't have phone privileges from 28.3-28.5. Not only that, they don't have voice priveleges *anywhere* below 50 MHz.

I am told by my friends up North when I go back there that I have a Southern accent. I do not hear it, and all the folks down here in Texas say I have a Yankee accent. So, I must be in between, but I sure don't hear a Southern accent. I *do* use the phrase "fixin' to" instead of "going to" when I am talking, though. Does that count?

And, as I understand it, only until they "renew" or change their callsign,
correct? In other words, when I renew my license, or if I change my
callsign, I would only be licensed as a Technician, I think.

I believe one of the arguments pulled out of various orifices in this
group for mandatory code proficiency is "code makes the ham." Well, it
didn't help much in these cases, regardless of the mode used to commit
these infractions.

Morse Code is a time-tested mode for effective, concise radio
communications. I wish my speed were better than it currently is. It is
a worthy goal to be proficient in this skill.

But it makes a lousy "finishing school" for today's ham radio operators.

A truly excellent sandwich. Roast beef on a kemmelweck roll (a type of round roll properly made only in the region, just as true hoagie rolls are only made by Amoroso).

--

I may have told this one before, but years ago I was in North Tonawanda as part of a project for work. February, of course, and of course that particular job involved lots of time out-of-doors. Some vendors took us to lunch at the place where wings allegedly were invented. One of the vendors salesfolk made the mistake of saying "you can't make 'em too hot and spicy for me". The restaurant staff proved him wrong.

Actually, this could be read in another way:

Since there is no international requirement that one can be in accordance with,
then the regulation is no longer operative at all and that means that novice
licensees and technician licensees with code credit have NO privileges below 30
MHz at all! :-(

International agreement has killed the "coded technician" license and has made
it indistinguishable (in operating privilege) from the "no-code technician"
license. ;-)

What regulation? ;-)

> 2. The international morse code regulation is changed to something completely
> different and no longer has any morse code proficiency requirement except what
> the administration of that country requires.

Then is it still an "international morse code regulation?"

> 3. The FCC, the administration of the USA, only requires the tech licensee to
> comply with the morse code proficiency requirements required by international
> requirements.

Of which there is no such thing, so there is no longer a "technician" license
that has any privilege below 30MHz.

> 4. The international requirements have no requirement to know morse code.
>
> This could be a legal loop hole.

But not the one you think! 2x :-)

CBers are folks who operate in the Citizens' Band Radio Service on
frequencies allocated to that service under Part 95.

Folks who operate on frequencies where they have no business being are
called "pirates" or "bootleggers" (and some other names that I won't
print here because they might offend someone's sensibilities).

>that information to anyone.

Yes, there is a way to tell. If you passed Element 1 you were given a
CSCE for it. Now that FCC no longer keeps track in their database of
who has Element 1 credit and who doesn't, it is incumbent upon the
licensee to retain that CSCE as proof that you passed a code test. If
you're heard operating on HF and FCC asks you to prove that you have
Element 1 credit and you are unable to do so, you're subject to
enforcement action up to and including the loss of your license.

> It is a great big loop hole and a great way to protest stupid radio rules.

No, it's a great way to lose your license.

Then you must have a very blissful existence, Keith. Read on, and let
the facts rid you of your ignorance as I show you numerous references
to the Technician Plus license in the FCC rules. When you're done you
can check to verify that I haven't falsified any of this by going to
http://www.arrl.org/files/infoserv/rib/part97.txt and reading Part 97
for yourself - which you should have done in the first place so that
you had your facts straight BEFORE you opened your mouth to change
which foot was in it:

ï¿½97.5 Station license grant required.
<snip>
(2) A club station license grant. A club station license
grant may be held only by the person who is the license
trustee designated by an officer of the club. The trustee
must be a person who holds an Amateur Extra, Advanced,
General, Technician Plus, or Technician operator license
grant. The club must be composed of at least four persons
and must have a name, a document of organization,
management, and a primary purpose devoted to amateur service
activities consistent with this part.

ï¿½97.9 Operator license.
(a) The classes of amateur operator license grants are:
Novice, Technician, Technician Plus (until such licenses
expire, a Technician Class license granted before February
14, 1991, is considered a Technician Plus Class license),
General, Advanced, and Amateur Extra. The person named in
the operator license grant is authorized to be the control
operator of an amateur station with the privileges
authorized to the operator class specified on the license
grant.

(b) The person named in an operator license grant of Novice, Technician, Technician Plus, General or Advanced Class, who has properly submitted to the administering VEs a FCC Form 605 document requesting examination for an operator license grant of a higher class, and who holds a CSCE indicating that the person has completed the necessary examinations within the previous 365 days, is authorized to exercise the rights and privileges of the higher operator class until final disposition of the application or until 365 days following the passing of the examination, whichever comes first.

ï¿½97.17 Application for new license grant.
(a) Any qualified person is eligible to apply for a new operator/primary station, club station or military recreation station license grant. No new license grant will be issued for a Novice, Technician Plus, or Advanced Class operator/primary station or RACES station.
<snip>

ï¿½97.21 Application for a modified or renewed license.
<snip>
(3) May apply to the FCC for renewal of the license grant for another term in accordance with ï¿½1.913 of this chapter. Application for renewal of a Technician Plus Class operator/primary station license will be processed as an application for renewal of a Technician Class operator/primary station license.

ï¿½97.119 Station identification.
<snip>
(f) When the control operator who is exercising the rights and privileges authorized by ï¿½97.9(b) of this Part, an indicator must be included after the call sign as follows:
(1) For a control operator who has requested a license modification from Novice to Technician Class: KT;
(2) For a control operator who has requested a license modification from Novice, Technician or Technician Plus Class to General Class: AG;
(3) For a control operator who has requested a license modification from Novice, Technician, Technician Plus, General, or Advanced Class operator to Amateur Extra Class: AE.

SUBPART C-SPECIAL OPERATIONS
ï¿½97.201 Auxiliary station.
(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be an auxiliary station. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control

operator of an auxiliary station, subject to the privileges of the class of operator license held.

ï¿½97.203 Beacon station.
(a) Any amateur station licensed to a holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be a beacon. A holder of a Technician, Technician Plus, General, Advanced or Amateur Extra Class operator license may be the control operator of a beacon, subject to the privileges of the class of operator license held.

SUBPART D-TECHNICAL STANDARDS
ï¿½97.301 Authorized frequency bands.
The following transmitting frequency bands are available to an amateur station located within 50 km of the Earth's surface, within the specified ITU Region, and outside any area where the amateur service is regulated by any authority other than the FCC.
(a) For a station having a control operator who has been granted a Technician, Technician Plus, General, Advanced, or Amateur Extra Class operator license or who holds a CEPT radio-amateur license or IARP of any class:
<snip>

ï¿½97.505 Element credit.
(a) The administering VEs must give credit as specified below to an examinee holding any of the following license grants or license documents:
(1) An unexpired (or expired but within the grace period for renewal) FCC-granted Advanced Class operator license grant: Elements 1, 2, and 3.
(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General Class operator license grant: Elements 1, 2, and 3.
(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.

ï¿½97.507 Preparing an examination.
(a) Each telegraphy message and each written question set administered to an examinee must be prepared by a VE holding an Amateur Extra Class operator license. A telegraphy message or written question set may also be prepared for the following elements by a VE holding an operator license of the class indicated:
(1) Element 3: Advanced Class operator.
(2) Elements 1 and 2: Advanced, General, or Technician (including Technician Plus) Class operators.
<snip>

Go back to 11 meters, troll...and don't come back until you know what you're talking about.

Which will amount to about six people. The rest of us are intelligent
enough to know that FCC makes the rules, not ARRL.

>All those no code techs and new hams that come
>into the hobby will never join a organization

Sure about that? I joined ARRL as a no-code Tech. Volunteered as a
member of its field organization, too.

>that did everything it could to
>keep the average citizen out of the HF bands.

The average citizen doesn't belong on the ham bands. The average
citizen belongs on MURS - and on 11 meters, along with you.

>The ARRL has kept ham radio in
>the dark ages by requiring horse and buggy morse code technology.

Once again, FCC makes the rules, not ARRL. Furthermore, the
requirement was a stipulation of international rules agreed upon by
treaty with all of the other countries that signed the same treaty.
Now, please go back to rec.radio.cb where you'll find more people who
don't know any better and might actually fall for your drivel? You're
just going to get torn apart in the ham newsgroups because most of us
hams have forgotten more than you've ever bothered to learn. You're
like debating against a 3-year old.

<kilowattradio_spam@earthlink.net> wrote:

> Dwight, There is no way for anyone to know if a tech license has passed a
>morse code test and all techs have voice privileges for 28.3-28.5 MHz.

First of all, all Techs do not have the voice privileges you
mentioned. Only Techs with Element 1 credit have those privileges.

As for your assertion that there is no way for anyone to know the
difference - Sure there is. Those who passed the test have:

1. A license (even if it's expired) in his/her name showing a class
that had the code test as a requirement, OR

2. A Certificate of Successful Completion of Examination (CSCE) for
Element 1, OR

3. Both.

Consider this: hams do not live, or operate, in a vaccuum. Other
people who live near you know who you are. Chances are that they also
know whether you're a no-code Tech or one who has passed a code test.
If not, they can always ask you, and ask to see proof of having
Element 1 credit.

Now, there may be no legal requirement for you to show it to them, BUT
you see, anyone with code credit will be proud of that fact and
happily show proof of having it...so if you refuse, all anyone has to
do is advise FCC that you were heard on HF and refused to provide
proof of having qualified for HF privileges when asked to do so. At
that point, FCC sends you a letter asking to see proof of your having
passed a code test. Refuse to prove to FCC that you have operating
authority to operate where you were operating, and you leave yourself
wide open to FCC enforcement action up to including the revocation of
your license, a hefty fine, confiscation of your equipment...get the
idea? Ham radio is not like CB where nobody cares whether you follow
the rules or not. The amateur radio service is self-policing. When
other hams hear you operating beyond the authority granted to you by
your license, they WILL blow you in to FCC, period.

> What is the FCC going to do run around and check every tech license holder?

No running around necessary. You get a letter in the mail. You either
respond to the letter or face the consequences.

>Besides would you rather give up ten meters to truckers and CBers?

The 10m band is in no danger of being reallocated to CB. Beyond that, there is no difference as far as I'm concerned between unlicensed pirates operating on a ham band and hams operating beyond the authority of their licenses. Both are operating where they have no authority to operate. Full stop, end of story.

Sure they can. So can someone with no license at all. And as FCC will
view the matter, the only difference is that a Tech is a licensed ham
who is supposed to know better, and thus will have no excuse.

> Here in America the FCC has to issue a warning notice, then a violation notice
>and the person cited can then simply demand a hearing before a administrative
>law judge. The ALJ is a pretty informal process and you just need to cite the
>rules and they are not very strict when it comes to matters like these.

Think so? Tell you what I think, I think you forgot to check your
facts again before opening your mouth to change which foot was in
there. The following is quoted from http://www.fcc.gov/oalj/ :

"The Office of Administrative Law Judges (OALJ) of the Federal
Communications Commission is responsible for conducting the hearings
ordered by the Commission. The hearing function includes acting on
interlocutory requests filed in the proceedings such as petitions to
intervene, petitions to enlarge issues, and contested discovery
requests. An Administrative Law Judge, appointed under the APA,
presides at the hearing during which documents and sworn testimony are
received in evidence, and witnesses are cross-examined. At the
conclusion of the evidentiary phase of a proceeding, the Presiding
Administrative Law Judge writes and issues an Initial Decision which
may be appealed to the Commission."

You call that an informal process?

Be advised that there are people currently behind bars because they
tangled with the FCC. The way you're going, you're going to be one of
them before the code test goes away. I suggest that you either find
out what you're talking about first, or stick to other newsgroups
where the participants don't know any better.

> If you have a tech license and you operate outside your allowed bands like pop
>up in the twenty meter band and keep it up they might come after you.

Make that "they will definitely come after you."

>But if
>you meet the international requirements and stay in the HF TECH bands it is not
>a violation of the rules

As has been repeatedly pointed out to you, it *is* a violation of the
rules, unless you have Element 1 credit. Have you ever bothered to
read the rules?

and no one can verify if you have passed a horse and
>buggy CW test any god damn way.

As has been repeatedly pointed out to you, this assertion is also
incorrect. Now go back to 11 meters where you belong, troll.

The *new* 25.5 has already been posted to this newsgroup for you. Did you even bother to read it? It leaves the determination of qualifications to hold licenses for amateur radio up to individual administrations - meaning that each country formulates its own set of requirements to be met by prospective licensees before that country's government will issue them a license.

Current licensing requirements in the United States call for a 5 WPM code test before the government will issue a license that grants HF privileges. Until those rules IN THE US are changed, they are not only valid under the *new* 25.5 but they are also binding on commission licensees. But don't listen to us - go ahead and operate on HF without the appropriate license so we can laugh until we wet our pants when we read in QST, Monitoring Times, Popular Communications, WorldRadio, and CQ about the fine FCC slaps on you for operating your station on an unauthorized frequency - if you even have a ham license of any kind, which I doubt.

Absolute nonsense. You don't know *anything* about the regulations
that govern the amateur radio service in the U.S., do you?

Here, in its entirity, is the portion of Part 97 that specifies
qualifications for an FCC-issued ham radio license:

SUBPART F-QUALIFYING EXAMINATION SYSTEMS
ï¿½97.501 Qualifying for an amateur operator license.
Each applicant must pass an examination for a new amateur
operator license grant and for each change in operator
class. Each applicant for the class of operator license
grant specified below must pass, or otherwise receive
examination credit for, the following examination elements:
(a) Amateur Extra Class operator: Elements 1, 2, 3, and 4;
(b) General Class operator: Elements 1, 2, and 3;
(c) Technician Class operator: Element 2.

Here, in its entirity, is the portion of Part 97 that sets the
standards for the various elements mentioned in the above subpart:

ï¿½97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove
that the examinee has the ability to send correctly by hand
and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed, using all
the letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.
(b) A written examination must be such as to prove that the
examinee possesses the operational and technical
qualifications required to perform properly the duties of an
amateur service licensee. Each written examination must be
comprised of a question set as follows:
(1) Element 2: 35 questions concerning the privileges of a

Technician Class operator license. The minimum passing score is 26 questions answered correctly.
(2) Element 3: 35 questions concerning the privileges of a General Class operator license. The minimum passing score is 26 questions answered correctly.
(3) Element 4: 50 questions concerning the privileges of an Amateur Extra Class operator license. The minimum passing score is 37 questions answered correctly.
ï¿½97.505 Element credit.
(a) The administering VEs must give credit as specified below to an examinee holding any of the following license grants or license documents:
(1) An unexpired (or expired but within the grace period for renewal) FCC-granted Advanced Class operator license grant: Elements 1, 2, and 3.
(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General Class operator license grant: Elements 1, 2, and 3.
(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.
(4) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Class operator license grant: Element 2.
(5) An unexpired (or expired) FCC-granted Novice Class operator license grant: Element 1.
(6) A CSCE: Each element the CSCE indicates the examinee passed within the previous 365 days.
(7) An unexpired (or expired less than 5 years) FCC-issued commercial radiotelegraph operator license or permit: Element 1.
(8) An expired FCC-issued Technician Class operator license document granted before March 21, 1987: Element 3.
(9) An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991: Element 1.
(b) No examination credit, except as herein provided, shall be allowed on the basis of holding or having held any other license grant or document.
ï¿½97.507 Preparing an examination.
(a) Each telegraphy message and each written question set administered to an examinee must be prepared by a VE holding an Amateur Extra Class operator license. A telegraphy message or written question set may also be prepared for the following elements by a VE holding an operator license of the class indicated:
(1) Element 3: Advanced Class operator.
(2) Elements 1 and 2: Advanced, General, or Technician (including Technician Plus) Class operators.

(b) Each question set administered to an examinee must utilize questions taken from the applicable question pool.
(c) Each telegraphy message and each written question set administered to an examinee for an amateur operator license must be prepared, or obtained from a supplier, by the administering VEs according to instructions from the coordinating VEC.
(d) A telegraphy examination must consist of a message sent in the international Morse code at no less than the prescribed speed for a minimum of 5 minutes. The message must contain each required telegraphy character at least once. No message known to the examinee may be administered in a telegraphy examination. Each 5 letters of the alphabet must be counted as 1 word. Each numeral, punctuation mark and prosign must be counted as 2 letters of the alphabet.
ï¿½97.509 Administering VE requirements.
(a) Each examination for an amateur operator license must be administered by a team of at least 3 VEs at an examination session coordinated by a VEC. Before the session, the administering VEs or the VE session manager must ensure that a public announcement is made giving the location and time of the session. The number of examinees at the session may be limited.
(b) Each administering VE must:
(1) Be accredited by the coordinating VEC;
(2) Be at least 18 years of age;
(3) Be a person who holds an amateur operator license of the class specified below:
(i) Amateur Extra, Advanced or General Class in order to administer a Technician Class operator license examination;
(ii) Amateur Extra or Advanced Class in order to administer a General Class operator license examination;
(iii) Amateur Extra Class in order to administer an Amateur Extra Class operator license examination.
(4) Not be a person whose grant of an amateur station license or amateur operator license has ever been revoked or suspended.
(c) Each administering VE must be present and observing the examinee throughout the entire examination. The administering VEs are responsible for the proper conduct and necessary supervision of each examination. The administering VEs must immediately terminate the examination upon failure of the examinee to comply with their instructions.
(d) No VE may administer an examination to his or her spouse, children, grandchildren, stepchildren, parents, grandparents, stepparents, brothers, sisters, stepbrothers, stepsisters, aunts, uncles, nieces, nephews, and in-laws.
(e) No VE may administer or certify any examination by fraudulent means or for monetary or other consideration including reimbursement in any amount in excess of that

permitted. Violation of this provision may result in the
revocation of the grant of the VE's amateur station license
and the suspension of the grant of the VE's amateur operator
license.
(f) No examination that has been compromised shall be
administered to any examinee. Neither the same telegraphy
message nor the same question set may be re-administered to
the same examinee.
(g) Passing a telegraphy receiving examination is adequate
proof of an examinee's ability to both send and receive
telegraphy. The administering VEs, however, may also include
a sending segment in a telegraphy examination.
(h) Upon completion of each examination element, the
administering VEs must immediately grade the examinee's
answers. The administering VEs are responsible for
determining the correctness of the examinee's answers.
(i) When the examinee is credited for all examination
elements required for the operator license sought, 3 VEs
must certify that the examinee is qualified for the license
grant and that the VEs have complied with these
administering VE requirements. The certifying VEs are
jointly and individually accountable for the proper
administration of each examination element reported. The
certifying VEs may delegate to other qualified VEs their
authority, but not their accountability, to administer
individual elements of an examination.
(j) When the examinee does not score a passing grade on an
examination element, the administering VEs must return the
application document to the examinee and inform the examinee
of the grade.
(k) The administering VEs must accommodate an examinee whose
physical disabilities require a special examination
procedure. The administering VEs may require a physician's
certification indicating the nature of the disability before
determining which, if any, special procedures must be used.
(l) The administering VEs must issue a CSCE to an examinee
who scores a passing grade on an examination element.
(m) Within 10 days of the administration of a successful
examination for an amateur operator license, the
administering VEs must submit the application document to
the coordinating VEC.

Nowhere in there does it say anything about the international
requirements.

> Well the international
>regulations do not require a morse code proficiency for HF access.
>97.301(e)

97.301(e) For a station having a control operator who has been
granted an operator license of Novice Class or Technician

Class and who has received credit for proficiency in
telegraphy in accordance with the international
requirements.
<snip> (Snipped material lists authorized frequencies for operators
with these license classes)

Once again, current international requirements leave it up to each
country's government to determine the requirements for that country's
ham licenses. Which brings us back to:

ï¿½97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove
that the examinee has the ability to send correctly by hand
and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed, using all
the letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

> I guess it all boils down to what "IS IS".

Yes, it does. And the above "is" what the current regulations "is"
whether you like it or not. Deal with it - or be prepared to explain
your illegal operation to Riley Hollingsworth.

>BTW, what do you care about US regs if you live in Canada?

The HF bands propagate worldwide - which means if clueless trolls like
you get on HF, he would have to listen to your pitiful attempts to act
like someone who knows what they're talking about.

I've been in favor of dropping the code test since the mid-1970's. You
are beginning to make me change my mind.

You are apparently unable to read and understand the applicable regulations, at both the US and international level, even though I and others in this NG have gone out of our way to post the material in this newsgroup (thus saving you the trouble of finding it yourself on the Internet) AND explaining it to you (thus saving you the trouble of turning off your CB set long enough to figure it out).

>I am talking about a technician class licensee having tech class HF
>privileges without the code test.

For the hundredth time: they don't.

> I'm not talking about making them to general.

Perhaps the confusion is because you insist on referring to picking up your microphone and talking on the HF Tech bands (plural) when there is only on HF Tech band (singular) in which Techs are allowed to operate phone (that being a part of ten meters). You don't get to bands (plural) until you have a General or above.

> Don't worry this is going to be reviewed legally very soon.

To paraphrase your own comment in another post: SNARF! HA, HA!

It will be reviewed *administratively* - there is a big difference. Congress empowered FCC to formulate and enforce regulations governing the use of the radio frequency spectrum. The courts have repeatedly ruled that FCC's authority is constitutional. The decision of whether or not to drop the code test will be purely an administrative decision on the part of the Federal Communications Commission.

The "international requirements" have to ratified, and FCC rules changed, before any content of those "international requirements" become the law of this land. Until that happens, your license is dependant on existing FCC rules and regulations. The courts will enforce those existing regulations, not some possible future change in them.

Further, the changes in the "international requirements" do not eliminate code testing - it simply leaves it up to individual governments to keep or end testing. If the US decides not to end testing, there will be no change in our laws for the courts to even consider in your defense.

Jim:

Actually, an Hawaiian Pizza is best when the "ham" is actually Canadian Bacon, and the pineapple is fresh, not canned. They have to be scattered over the pizza BEFORE baking, not after. The ham (bacon) has to be crisp, and the pineapple well caramelized. A properly prepared Hawaiian Pizza is, as Martha would say, a very good thing!

>Perhaps the no code requirement for HF (if adopted by the FCC) will
>keep more of the technician class in the ARS than the numbers predict.

George:

That will largely depend on what the HF phone bands become when the
present Technician-class licensees get their no-code General-class
upgrade and start plugging in the microphones. If, in the ensuing bedlam,
they are turning off large numbers of those who would have potentially
been good, decent HF phone ops, then there could be a problem.
Unfortunately, I'm pretty sure that's precisely what will happen. What
I'm waiting to see is whether or not we get more HF digital operators --
preferably ones with reasonable typing skills.

Brian:

Pity. A degree in Photography from Rochester Tech could have meant that your nephew could have got something most "photographers" out there can only dream of: A job as a photographer that pays real money!

I did the "I wanna be a photographer" bit myself for many years -- in fact, they were the 14 years when I was whining about code testing requirements in the ARS. I even had the requisite rubber stamp for the back of my prints that said, "Lawrence J. Roll, Photographer." I actually did a bit of paying work, shooting weddings and high school yearbook headshots for a studio. I won various prizes in photo contests in my own college and others in the WNY area. After joining the Air Force, I did 100% of the photos for my squadron yearbook during my tour in Korea, and later got to make some actual offical USAF photos when I was stationed at Andrews. One of my all time favorites is a shot of Pope John Paul II on his arrival at Andrews for his 1979 visit; he is holding the infant son of a young Sergeant on the base and his XYL who were there to greet His Holiness that day. This photo was sent to Rome and I received a letter of acknowledgement stating that it was placed on display on some wall somewhere in the Vatican. I also have some amazing photos of President and Mrs. Reagan on the Andrews flightline as they walked from the Marine One helicopter to Air Force One prior to

departure on one of their many trips I "worked" as a Special Air Missions Coordinator. I've got to get those photos copyrighted; they could be worth a few bucks someday!

True, the FCC no longer issues that license. However, those with an existing Tech Plus license before the change still retain that license and operating privileges. Today, Technician license holders who have also passed the code test get the same HF operating privileges as those earlier Tech Plus license holders.

> Hey Dwight have you ever driven 56 in 55 mph zone?

Yes, I have driven faster than the speed limit when I felt, rightly or wrongly, I could do so safely. The decision to do so was based on my personal assessment the possible impact of my actions. But this goes back to what I said earlier. Again, I do not just base my decision to abide by the rules and regulations governing Amateur Radio solely on FCC enforcement abilities. Instead, I base that decision on my own sense of what is good for the Amateur Radio community - the impact of my actions. I personally benefit from a community with a commitment to abide by the rules and regulations. Therefore, it is in my own best interests not to do anything to upset that situation. As a result, I also abide by the the rules and regulations.

That's the point -those existing regulations incorporate by reference an
international requirement that no longer exists

I agree. But then we shouldn't either. Our equipment is also advancing, reducing the need for a fallback system (which may explain why code testing appears to be going away). A modern station, equipped with the latest gear (properly installed), has the ability to get through where needed. At that point, it is fairly useless to argue CW offers more than that (even if that can be proven - it hasn't).

There's that alternate reality. My reality is different. I've been to many
Hamfests and 5+ Ham radio clubs. Rarely are there any good looking females
there.

>I really enjoy meeting XYL's or YLs on the radio.

I'm sure you do.

> I know several serious female CW ops.
>Im not going to put out calls here, because I really dont want to see them
>insulted by gutless male pigs.

No need for that anyway. Hams aren't pigs. At the few Hamfests which had pretty
females, few of the (male) Hams showed any interest. Probably only would talk
to a female if she had a callsign.

To be fair though, I am playing devil's advocate to some extent. I don't
want to get Techs in trouble. What I'm saying is that there is now at
least an arguable interpretation of the _existing_ regulations that would
allow no-code Techs on the Novice bands now.

The key words in FCC s.97.301(e) are "Technician Class and who has received credit for proficiency in telegraphy in accordance with the international requirements". The current wording of ITU s25.5 (supra) does not _require_ anyone to pass a code test unless the administration says so, ergo it is _not_ a _requirement_ , international or otherwise.

The FCC rule does not stop after "has received credit for proficiency in telegraphy". If it did it would be unambiguous. If we give any weight to the next part of the sentence "in accordance with the international requirements", we are forced to take into account the fact that the international regulations do not require "proficiency in telegraphy' any longer, as of July 5th inst. If this means anything, it ought to mean that since there is no longer an international requirement for proficiency in telegraphy, then the rule should be interpreted to apply simply to "Technician Class" operators without further qualification.

OTOH, relying on this argument is risky!

That's not what he is saying. US Rule 97.301(e) uses the words
'international requirements', i.e. it incorporates the ITU rules by
reference. If he goes on 10m he may well end up before a judge, but he may
win (or not, it's risky).

In what way are we supposed to push the hobby/service forward? Give us an example - an example of something a person with code ability has done in the last two to three decades to push the hobby/service forward.

As I see it, the Technicians are doing pretty much doing the same things the other license holders are doing - talking on the radio, tinkering with their equipment, occasionally going to club meetings, occasionally helping out in disasters, and so on. All of these are contributions. Obviously, nothing special since other license holders are also doing the same things, but I wasn't aware Technicians were expected to do more than the other license holders.

> And while you're at it perhaps you can explain what
> would change in this respect by handing nocodes access
> to the HF bands too?

You, Brian, aren't handing access to the HF bands to those without code ability. Regardless, since you're opposed to HF access for those without code ability, and that position is out of step with the current trend, it is up to you to make an argument to support that position. Demanding more from those without code ability than those with is not exactly a strong argument.

To be fair to Walt, there were rumours out of WRC 2003 to the effect that DL would keep the CW test (as well as the former Soviet bloc and possibly China). It is a surprise that Germany will in fact be third to ditch the test (unless someone else sneaks in before the 6th of August!), but life would be boring without surprises. Perhaps Russia will surprise us and follow Germany?

You obviously don't understand the FCC rules any better than Keith.
Until the FCC eliminates the code test requirement, everything remains
the same for U.S. hams.

Not quite. The rule is the same, but the 'international requirements' it refers to have changed. How you interpret that is another thing, but the FCC chose to write a rule that incorporates by reference the rules that were changed in the WRC.

Here's an idea for an analogy. Anyone here ever write any code of the computer kind? Say you write something that makes a call to another object/subroutine, etc. The ITU have re-written the subroutine, and the FCC code includes a GOSUB that calls it (revealing my BASIC roots here).

2809. Re: The myth that BPL is a solution for rural broadband

> There is no broadcast television in the HF bands. Channel 2 is 54-60 MHz,
> low VHF...but that part of the band (up through channel 5) is also within
> the scope of BPL frequencies..

But the motive still holds. Have you noticed that the ARRL is
collaborating w/the bpl providers to place the interference on SW bands,
where it will have 'optimum' impact on AM transmissions, rather than
placing it on VHF bands, such as 6 metres, or the FM broadcast band,
where the interference would have less of an effect, in relative terms?

Obviously, such a strategy will help to clear out the low-rent tenants
currently cluttering the U.S. SW spectrum, so it can be gentrified for
a better class of paying customers. On the ARRL website there's an
article of one use for BPL which explains why they aren't designing
asymmetry into it: the ability to hook appliances into the web. You've
probably heard of Coke machines hooked up to the internet. Imagine
a frige that can read the RFId tags of products inside it, and can
transmit that data to your local Safeway. They wouldn't want to
restrict uploads for those kinds of uses.

There are also trucking companies that want to get exclusive use of
HF spectrum to track their shipments.

Great. If you could now only work in Roswell, grassy knoll, Elvis, moon landing hoax, the CIA and the Jews, you'd have it made.

BPL is bad enough without idiotic conspiracy theories.

You must be a lifetime member of ARRL, eh? And you would snip the
reference to the article at ARRL's site on other uses for bpl,
giving details on how it is collaborating in the bpl effort, eh?
It 's typical of scum like you to make such an attack, since you are
too lazy to look up the fact that there was a coke machine on the net,
the 1st one in Pittsburg. Glenn Hauser had a report on a trucking
company testing HF tracking (or perhaps a reference to Kim's show,
when it was still on VOA). It's nice of the scum at ARRL to give
free consulting services to those who have more than enough time &
money at hand to trash the SWL bands.

2814. Ham Radio Rescue in California Press

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-26 06:45:04 UTC
From: k4yz@aol.com
Message-ID: <5c01b95b.0307252245.6ea4a62d@posting.google.com>
Source record: 72599

Nothing like a bit of truth to unravel rants:

FROM THE ARRL WEBSITE:

Ham radio key in California hiker's rescue (Jul 24, 2003) -- The San Diego Union Tribune's SignOnSanDiego.com Web news service reports that a hiker in the El Capitan open space preserve suffering apparent heat exhaustion was rescued July 19 after his hiking companion used ham radio to relay a message to authorities. ARRL member Rod Dinkins, AC6V, of Oceanside picked up the distress call from Tim Slaby, KG6QPL, of Spring Valley and alerted the San Diego County Sheriff's Department's Santee station.

(my emphasis added:) Slaby resorted to his handheld transceiver after discovering that his cellphone wouldn't work in the wilderness.

(RESUME) KG6QPL was able to raise the Palomar Amateur Radio Club repeater some 40 miles away, however. Slaby, who also carried a GPS unit, was able to provide the pair's precise location. A sheriff's helicopter crew rescued the exhausted hiker--identified as Thomas Sayer--and airlifted him to an ambulance, which transported him to a hospital, authorities said. He was treated for dehydration and released about four hours. "For hikers in need of help, Amateur Radio worked where their cell phone didn't," said ARRL Vice President (and former Southwestern Division Director) Fried Heyn, WA6WZO.

UNQUOTE

Nice job, Rod and Tim!

Your license will say Technician but you will retain your Tecnician Plus privileges forever (or until you upgrade to General) assuming that you keep your license current. Since the FCC database will no longer show the difference, keep a copy of your old Technician Plus license and/or your Technician Plus CSCE to be able to prove that you have those priviliges.

Hey Keith, do actually know the FCC rules? They did stop issuing the novice and tech plus licenses, but the requiremenmts are still there. Now if a tech passes element one thet are still a tech but witt the same HF priviledges as a novice. They have to keep there CSCE as proof. The treaty stated that it no longer requires code, but would leave it up to the individual countries to set the rules, and UNTIL the fcc says CW is no longer needed, then the same rules apply as before the WRC treaty change.

argument.

One of the big no-code arguments is that code was keeping highly qualified
people out of ham ram radio and that these people would push the hobby
forward technically. So the other side asked what have the current
no-coders done to push it forward to prove that dropping the code altogether
would bring in the hi-tech types since we ought to have a bunch of hi-tech
types in the no-code tech group. If one looks at reality, only a very, very

limited handful of people came up with the technical advances regardless of license class so it's probably not a fair question anyway. Plus it would be skewed by the fact that prior to the no-code tech license, all hams had to have code. Neither side has a good argument attempting to use this point to prove anything.

Maybe not forty bucks but would not require another "fund drive" to
carry out.

> The ARRL members who don't have web capability
> can make a trip to the public library and vote.

Tricky issue. I think one would be hard-pressed to find many active hams who are not online. Plus when ya get right down to it 2-3 thousand reponses would be a big enough sample to produce a statistically rigorous result.

Through freedom of choice, CW is my favorite mode. I would have used
my free will to learn and use CW even if there had never been a
requirement to do so.

Beats me, ask those who repeatedly claim that eliminating the code tests will by some mysterious means or another "push the hobby/service forward". Which experince has already demonstrated is complete BS.

> Give us an
> example - an example of something a person with code ability has done in the
> last two to three decades to push the hobby/service forward.

G3PLX for one. But that's not the point. The difference is that us coders don't go around bleating about how we "push the hobby/service forward". Which is one of the bogus battle cries of the free lunchers.

> As I see it, the Technicians are doing pretty much doing the same things
> the other license holders are doing - talking on the radio, tinkering with

> but I wasn't aware Technicians were expected to do more than the other
> license holders.

EXACTLY my point. The nocodes haven't done a thing to "push the hobby/service forward", the circle is complete, thankew for the support.

> > And while you're at it perhaps you can explain what

Watch for my response to the NPRM. It will not be in support of the claim that eliminating the code tests on the basis of "pushing the

hobby/service forward" is a valid rationale.

Wrong!

We need a more modern test.
Typing is too easy.
My thirteen year passed a school mandated typing test last school year.

A real ham should be able to copy 5 minutes of 4 channel rtty by ear using a
keyboard as the transcription.
device. Or how about five minutes of BPSK by ear. :)

Let the flames begin!!!!!!!

Risky, yes, but only because one would not wish to be the acid test for whether the argument would work or not in a court of law. But the argument you present above is very interesting and I'd find it very interesting to see presented and debated in a court of law...

2832. More Hiker Rescues

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-26 15:16:04 UTC
From: Elmer E Ing <EEI@dontbother.com>
Message-ID: <UWwUa.11621$ff.5746@fed1read01>
Source record: 72769

Using Google -- type in "hiker rescue ham radio" without the quotes and get many more incidents where Amateur Radio was instrumental in rescue operations and saving lives.

Cellphones don't always work.

Hike and carry a transceiver, a GPS unit, and lotsa water.

Elmer E Ing -- Old Hiker
No Calif Sierras

FROM THE ARRL WEBSITE: http://www.arrl.org/

Ham radio key in California hiker's rescue (Jul 24, 2003) -- The San Diego Union Tribune's SignOnSanDiego.com Web news service reports that a hiker in the El Capitan open space preserve suffering apparent heat exhaustion was rescued July 19 after his hiking companion used ham radio to relay a message to authorities. ARRL member Rod Dinkins, AC6V, of Oceanside picked up the distress call from Tim Slaby, KG6QPL, of Spring Valley and alerted the San Diego County Sheriff's Department's Santee station.

Slaby resorted to his handheld transceiver after discovering that his cellphone
wouldn't work in the wilderness.

KG6QPL was able to raise the Palomar Amateur Radio Club repeater some 40 miles away, however. Slaby, who also carried a GPS unit, was able to provide the pair's precise location. A sheriff's helicopter crew rescued the exhausted hiker--identified as Thomas Sayer--and airlifted him to an ambulance, which transported him to a hospital, authorities said. He was treated for dehydration and released about four hours. "For hikers in need of help, Amateur Radio worked where their cell phone didn't," said ARRL Vice President (and former Southwestern Division Director) Fried Heyn, WA6WZO. Nice job, Rod and Tim!

Rod is well known in another direction, he's the ownwer/webmeister for one of the best ham websites out there, great resource.

Not a thing....but do you consider the campaign run by No Code International
a exercise in free speech, or a attack on the Morse testing requirement? I
consider it an attack. Which has NOTHING AT ALL to do with Free Speech.

I tend to agree with you Larry on this one. I see a large influx of no
nothing newguys trashing all up and down the bands. Until they run into a
75 or 20 meter 'klick'. Then its all over. It will make the AM/SSB wars
look like a skirmish.

Which is exactly what the FCC wants. Just another reason to shut down the
ARS.

I have decided that when I see the first sign of this insanity I will
forever place the microphone in the trash bin. With the exception of my
MARS and Traffic Nets functions.

No, but wont it be 'wonderful' when the FCC auctions off all the V/U/above
freqs and declares the Tech ticket NULL and VOID because they have no more
allocations for them?

And they can now operate on HF....unfortunatly HF will be useless because of
the newly deployed BPL.

Its all a plot....watch and behold.

I'm a Libertarian. Libertarians believe in the least amount of governmental
intrusion and control as is necessary. For instance, Libertarians are against
seat belt laws, motorcycle helmet laws, and I assume also against unnecessary
governmental requirements like a driver's test using a stick shift and Morse
code. I suspect that the new hams who learn Morse code because they want to
will be better members of the ham community than the ones who learned Morse
code because they had to even though they hated the idea of being forced to.
I suspect they will certainly not bitch about Morse code testing 24/7.

And what EXACTLY does that have to do with the story? The focus of the story was ham radio used in a rescue. It's good PR for ham radio, no matter if the transmission was phone, cw, psk-31, sstv, rtty, etc, etc, etc.

Yes.

or a attack on the Morse testing requirement?

Yes.

In the back of your mind, you realize that the usefulness of CW is low
enough that the majority of people will never bother to learn it if not
forced to do so. CW, as a requirement, will be dropped. We will then see
what value peopls put on it.

Personally I *encourage* all those who think that they now have HF
privileges to hop on and start using what they think they have..

Let enough people know, and we (or you yourselves, since you're so sure)
can make recordings of your activity, then ship 'em off to Riley and get
his interpretation of the matter!

Have the courage of your convictions folks?

I've dealt with these types before. Take one part of a rule, and then proceed to interpret the bejabbers out of it.

There is no rule that can be written that cannot be interpreted just about any way a person wants to.

In other portions of the rules, there is adequate understanding that for HF privileges, you must take a test, one of the elements consisting of a Morse Code test.

In addition, we must note that the Morse code test has NOT been eliminated. It is now up to the individual country to determine if they want the test as a requirement.

So, the US is still in compliance with the rule, in requiring a Morse code test. If we eliminate the MOrse code test, we will still be in compliance, having exercised that option as outlined in the rule.

If you don't believe me, just give it a try, and provide documentation of your times and date. A recording would be nice too.

Do you folks have the courage of your convictions?

> What's so difficult to understand? (Other than English, that is.)

What are you babbling about dickieboy? Maybe his misconceptions are clear to idiots like you (why does that suprised anyone?), but the fact remains, until the FCC goes through the procedures necessary to eliminate the code requirement for the amateur radio service, it is still required and everything is just as it has been. Just because the WAC no longer requires the code, does not automatically drop it from the FCC requirements. Try reading more carefully and you might learn something, like how to find the 10 meter band.
Lets see a newbie go for the General license and see if he can get one without taking a code test. You are as dense as this keith bird. You both must be really good on cb.

worth shit.

> And you would snip the
> reference to the article at ARRL's site on other uses for bpl,
> giving details on how it is collaborating in the bpl effort, eh?

And you would completely and intentionally misinterpret the ARRL's
anti-BPL position as the opposite, implying they actually "collaborate"
with the BPL industry in some huge conspiracy that is clear only if one
wears an aluminum foil hat.

> It 's typical of scum like you to make such an attack, since you are
> too lazy to look up the fact that there was a coke machine on the net,
> the 1st one in Pittsburg.

It is typical of a conspiracy theory nut like you to invent all kinds of
government conspiracies that have no basis whatsoever in reality except
for people who buy a shack in Montana and arm themselves to the teeth
for that inevitable day when the UN-based world government (ATF and IRS
included) tries to knock down their door and suppress their "God" given
freedom to be stupid.

> Glenn Hauser had a report on a trucking
> company testing HF tracking (or perhaps a reference to Kim's show,
> when it was still on VOA). It's nice of the scum at ARRL to give
> free consulting services to those who have more than enough time &
> money at hand to trash the SWL bands.

Glenn Hauser, Kim, Hewey and Dewey, Ben and Jerry, who the hell cares?
Your so-called ground-breaking earth-shattering Pittsburg (sic) Coke
machine is a red herring. Internet appliances concept has been around
for years. You have yet to show just how is "ARRL collaborating w/the
bpl providers to place the interference on SW bands".
You have yet to show just how "such a strategy will help to clear out
the low-rent tenants currently cluttering the U.S. SW spectrum, so it
can be gentrified for a better class of paying customers". Who are these
phantom paying customers who are taking over SW? Trucking companies? Do
these trucking companies have a secret anti-BPL filter that they will
deploy once they take over SW? Another conspiracy?
When you attempt to quote "an article on the ARRL website", it is a

common practice to provide a link so that people can read it themselves, instead of relying on your interpretation of "asymmetry".
You also have to show just how is the ARRL collaborating with the BPL industry in the rest of the world, because there, too, is the BPL placed directly across the SW spectrum. Could it be that this is the optimum spectrum for data transmission over the power grid that is not designed to transmit data? Naaaaah, it must be a (world-wide) conspiracy!!! And the ARRL is in on it!!!

In short, your post is a typical example of a conspiracy nut and it does nothing constructive to help with the anti-BPL effort. On the contrary, it completely muddies the issue while providing the pro-BPL people with the ammunition to label hams as lunatics.

So take your anti-ARRL paranoia to your Freemen CB meeting in your Montana shack and leave it there.

While tempting, I do support everyone's right to express their thoughts. Even when they have absolutely nothing to do with the topic at hand. I see you still did not answer my question as to what mode was used had to do with the events of the rescue. It appears to be an attempt to start another CW VS Anti-CW discussion. Gee, we sure don't have enough of those.

At the store this morning, I saw prices for oranges were cheaper than the apples. This statement has about as much to do with the story as your's did.

> http://www.qsl.net/w5net/

I think BOTH of you have lost context of what everyone is up in arms over. Who cares if CW will get through when the other modes fail, it's not important because those who pass the 5-wpm test are NOT equipped to take advantage of that mode. I'm living proof of that. I'm NOWHERE close to being Morse code proficient, yet I can pass Element 1 every day of the week and twice on Sunday...and very likely with 100% copy.

We're talking about donning a set of headphones and having five minutes of perfectly sent CW piped through in a format that, with some minimal preparation, is fully expected. Ready? A one and a two and ...

N0CW DE KN0WCW, UR RST IS 589. M_ N_M_ IS J_NA_HON. RI_ HE_E I_ _AES_. QT_ IS _LORI_A. _EATH_R I_ SU_N_.

The above sample represents 92 characters as sent on the test. Remember, Numbers, punctuation marks, and prosigns count for two each. Can ANTONE really look at this and assuming that BOTH calls up front are missed, believe that the average Joe can't fill in the missed characters solely from commonn sense?!

Does passing Element 1 demonstrate Morse proficiency? Heck no. It's not jumping through hoops, it's not a barrier, (Except to the lazy.) it's a forced TASTE. That's it. YES it's a method by which one is FORCED to utilize a little self discipline and try out a little CW. Like it...keep moving and practice on your own. Don't like it...drop it like a bad habit. But to say that:

A. Morse code is a barrier to ham radio.

B. Passing Element 1 represents "knowing" Morse code.

C. If the military doesn't use it, it's no longer needed.

Is pure horsefeathers. Sorry, but it's time to call the lazy...lazy. I personally believe that 5-wpm is great for entry-level HF (Including the General, BTW.) with 13-wpm for the Extra. The no-code Tech allows those who wish to enter ham radio sans the code so the barrier argument is empty. Try passing Element 1 and just hopping on 40 and see how "proficient" you feel. Finally, who gives a hoot whether or not the military uses CW...this is ham radio, rich with tradition. It's part of our culture. Don't like it...try scale modelling or gardening. I wanted more than CB could offer. I researched the requirements...and fulfilled them. END OF STORY.

You better believe that I'll be writing the FCC and EVERY local and state rep who'll listen and I'll make sure they know that I'm a newbie and a CBer too. (No barrier to either.) A suggestion to all. (Even you NCTA.) When you get those political flyers in your mailbox, respond to them immediately re. your concerns. Those are when these guys are hungry for their jobs and will likely, at the very least, make inquiries. Remember, one ham's letter is responsible for the vanity call system AFTER his NPRM was denied. His letter ended up in the hands of a rep who had some say with the FCC's budget. How quickly the vanity call system was implemented WITHOUT a second NPRM. Your political and monetary clout will have much more leverage than NCI. I happen to believe that PCTA outnumber NCTA by 2:1...likely why the idea of a square and fair vote scares 'em $hitless. Then comes the "FCC knows best" whine to go along with the "regulatory" cheese. What a stroke of luck it is that the FCC has ZERO interest in the ARS and welcomes anything that'll reduce it's "regulatory" workload. (Oh, so THAT'S where that darned word fits in.)

I for one cannot join in recent "celebration of underachievement." PCTA's, get off your duffs and write a letter. (Not to the FCC, to your local reps.)

Cross-posted to: rec.radio.amateur.policy,rec.radio.cb

Does this give ANY of you No Coder types something to think about??? Please read it over and maybe, just perhaps something will sink in. This is the way it is....end of discussion.

From the ARRL letter, Vol 22. No 29

Dan/W4NTI

==>WHAT TO DO ABOUT THE MORSE REQUIREMENT POST-WRC-03?

World Radiocommunication Conference 2003 (WRC-03) made optional the requirement to prove the ability to send and receive Morse code to operate below 30 MHz. While Morse exam elements remain on the books in the US, Canada and elsewhere, Switzerland and the United Kingdom have apparently become the first countries to delete their Morse requirements for HF operation. In the US, however, the FCC is unlikely to act on its own motion to simply make the Morse testing requirement go away.

"There isn't an exception in the Administrative Procedures Act that I am aware of that would permit the Commission to issue an administrative fiat changing the license structure or exam-requirement rules," said an FCC staffer who's closely involved with Amateur Service rules. Other countries can do this because they have different laws and procedures, the FCC staff member observed, adding that even if it could be done here, "that still leaves unanswered the fundamental question: What do you want the new rules to be?"

In its December 1999 Report and Order restructuring Amateur Radio licensing, the FCC stopped short of revising the rules to sunset the Morse requirement automatically if WRC-03 deleted Morse proficiency from the international Radio Regulations. The FCC also acknowledged "a clear dichotomy of viewpoints" on the Morse code issue within the amateur community.

The ARRL's policy for several years has been that Morse should be retained as a testing element in the US. At its July 18-19 meeting in Connecticut, however, the Board said it would solicit and review input from members on the Morse testing requirement and other possible revisions to Part 97 arising from WRC-03.

The first move on the Morse code question in the US is for someone to file a Petition for Rule Making with the FCC seeking a rule change. No Code International (NCI) <http://www.nocode.org/> has spearheaded the battle to eliminate the Morse requirement and would be a likely organization to file such a petition. NCI Executive Director Carl Stevenson, WK3C, said late last week that NCI was still studying the matter and had not yet made a

final decision on a plan of action. An ARRL member, Stevenson says he hopes personally that the League would join NCI in actively encouraging the FCC to eliminate the Morse exam element as soon as possible.

Hopes for a quick resolution to the Morse question could be wishful thinking, however. Once a petition to drop the Morse exam element is filed, the FCC will put it on "public notice" by assigning an RM number and soliciting comments. If more than one such petition is filed, the FCC is obliged to invite comments on each. When that process is completed, the FCC may determine that a Notice of Proposed Rule Making (NPRM) is in order. The Commission at that point could incorporate all Morse-related rule making petitions into a single proceeding. The NPRM would get a docket number, and the comment process would begin anew.

Further complicating and extending the process, the FCC most likely would incorporate other pending Amateur Radio-related issues into the same NPRM. At the end of the comment and reply comment periods, the FCC would issue a Report and Order (R&O) that includes its decision on the Morse code requirement and any other issues incorporated into the proceeding. The whole process could take a couple of years, perhaps longer.

Ratification of the WRC-03 Final Acts by the US Senate does not appear to be necessary before the FCC can act or begin the rule making process. Following World Administrative Conference 1979 (WARC-79) which resulted in three new HF amateur bands, the FCC acted in 1982, prior to Senate ratification of the conference's Final Acts, not only to initiate the rule making process but to give amateurs limited access to 30 meters.

Radio Amateurs of Canada has advised hams in that country that the Morse qualification requirement remains in effect for operation below 30 MHz, "pending a review by Industry Canada of the impact of the WRC-2003 regulatory changes on the Canadian radio regulations, policies and procedures."

What are you babbling about, JJ? He made it quite clear (except for
morons):
1. The FCC Rules & Regs make reference to the code requirement as
spelled out by the WRC.
2. The WRC no longer requires any code.
3. Ergo, the FCC Rules & Regs no longer require code.

What's so difficult to understand? (Other than English, that is.)

I believe the ARRL will solicit its members for their opinion on this
subject, for their submission to FCC.

After reading years of the venom from ANTI CW proponents I have decided to
oppose ANY removal of the CW requirement.

At one time I thought the removal of CW testing would be a good thing, I
have rethought that position.

I am tired of all the whinning, bitching, moaning and bullcrap coming from you lazy good for nothing losers that are TOO SORRY to learn a 5 WPM code speed and take a multiple guess test. Now thats plain sorry.

Expect massive comments and opposition from the real hams.

Another problem that was pointed out to me are people with disabilities.
According to the American with Disabilities Act the government can not
discriminate against disabled people .
Now that s25.5 is international law the government must now accommodate
disabled people and they must do it without reasonable delay.

Since I was "double quoted" in this, I'm not certain if that last comment was directed back to me or just for Keith.

However, note that I recognize that there may be an unintended result of the recent international event - and that is certainly a "new thought" for this group. It also demonstrates that no body of law should refer to definitions made in another body of law that one has no control over and expect things to be the same if the referred-to law is changed when the referring law isn't.

Do I need to petition for declaratory ruling to find if the FCC rules say if I
can operate CW on 80 meters?
And do not say I'm playing a lawyer. I am discussing a issue you on a f*cking
news group.

But note HOW the privilege is defined. In this case, it's NOT defined as simply holding "element 1 credit" like it's pre-2000 predecessor was. Other license classes' privileges are based on license class, which is in turn based on element credit. However, for the HF operation of Technician and Novice licenses, the current regulation doesn't refer to element credit but instead refers to the international requirement - which was just repealed (and replaced with a statement that each country may decide for itself - but that makes it a "national requirement" and choice, not an international one).

If the section privileges were based on "holding element 1 credit," then I would agree that nothing has changed. However, that is clearly erroneous.

> So, the US is still in compliance with the rule, in requiring a Morse
> code test. If we eliminate the MOrse code test, we will still be in
> compliance, having exercised that option as outlined in the rule.

I don't dispute that. However, the authority for HF operations of Technician and Novice licenseholders isn't based on simply holding element credit like it

is for the other license classes.

There's a fourth step here:

4. Since there is no international requirement any more, no one can meet that
[now nonexistent] requirement.

Therefore, under this logical application of the regulation and the events
effective July 5, 2003, there is no operating authority for any Novice or
Technician (Plus or with an element 1 CSCE) for any frequency below 30MHz,
since said authority contains a requirement that cannot be met (because there
is no such requirement anymore, having been repealed).

A 5wpm code test does not discriminate against Americans with disabilities.
Disabled people have passed while their unhandicapped brethren have sat on
the sideline whining about the code.

It maybe a big loop hole Keith UNTIL the FCC
decides they want YOU to provide proof that you
had the proper license to transmit there. It's a
VERY bad idea, and I don't recommend that anyone
try it either. For a better way they could follow
your other suggestion about contacting the FCC. Or
from a copy of an E-mail I got below:

++
Leland,

Thanks for sharing your thoughts on code
requirements with me. This, as
a matter of fact, was the topic of a poll I sent
to all ARRL members in
this Division. The "all;" however, is
unfortunately limited to members
who allowed me to send such information and polls
to them with the
information they provided when they signed up at
the ARRL web site for
the Members Only page. If you haven't done this,
yet, please do. About
every 4-6 weeks I send information to "all"
members on various actions,
thoughts, etc. that are likely to impact them as
radio amateurs.

Having said the above, I will include your input
into the responses I
received from my poll.

Tnx, 73, GL,

Jim

Actual it is discrimination, but that beside the point. The FCC should not
deleted
47 CFR 97.503(a) because of ADA - it should deleted it because it: (1) is
unnecessary,
(2) is bad public policy, (3) it servse no legitimate government purpose,
and (4) is not
in conformity with 5 USC 706(2)(A). At WRC 2003, no nation member spoke
in favor retaining ITU rule S25.5.

Whinning? I think you mean winning. We are sat the winning side of the
debate
to end Morse code exams.

Dee, it not necessary to insult people, just tell Keith that the WRC 2003
delete
the international requirement; and the FCC, in due course will delete
the domestic requirement.

I wish they would test the system so much! There is so much more to
"rules" han just a verbatim translation. There is intent, and spirit.
Since there is always someone who likes to put a spin on the rules, ther
has to be constant interpretation of the same.

An early acquaintance in ham radio could "read" CW in flashing lights. I've
heard stories of others who have felt vibrations to "read" CW.

My ex had 70% hearing loss in both ears and a constant ringing of the ears.
He too passed his 5wpm. Although he did have it so loud when he practiced
that I either had to leave the room or make him wear headphones. Of course
there were other testing methods for those who were totally deaf.

At one point, I was thinking about trying the vibrating method, like
holding my fingers on a speaker cone. But as a challenge, I decided to
go for the aural method. Wasn't easy, but I did it.

Reminds me of a retired boss I used to have. Real nice guy, but could not always track with the discussion at hand. I remember one day during an important meeting when the "big" boss was making a very important point. Right in the middle of the big boss making what he believed to be the most important point of the meeting, the guy who had trouble tracking pointed out the window and stated "Why there goes a red tail hawk!"

The big boss just shook his head. I guess I'll follow his lead in the future...

Hehheh, I know that one. I use headphones to listen to the television,
and my XYL is driven up the wall by the level I use to listen. Field day
can also be a nuisance, when one person is op, and the other is logging.
Thank heavens there are some headphones with volume controls on them.

In the end, That's a big reason why I love PSK31. I don't have to
disturb anyone else, and can work in a relaxed state of mind.

It is time to start the phase-out of the Amateur Radio Service. Modern communications techniques make it obsolete.

There are of course exceptions to every rule, and those few exceptions are the operators who actually serve a purpose by participating in either the study of radio technology or provide REAL emergency communications.

These few usually have formal education in technology. Many are Engineers and working professional technicians.

The vast majority of chit-chat going on in the Amateur Radio spectrum is a terrible waste of a limited RF resource. Now that the Internet is available these conversations can be carried out WITHOUT wasting spectrum.

Amateur Radio must be shut down in a phased, orderly fashion to make way for new commercial messaging systems.

The "Amateur Radio" of the future should consist of a few channels, to be made available to REAL experimentation or research, or REAL viable communications networks on an "as needed" basis ONLY. Who then, would be allowed to operate?

1) Scientists, or researchers who need the frequency spectrum for their work and
2) Operators on viable, modern message handling systems.

I can imagine the arguments that the "hams" would present against this, and I've got an answer to them all. CW, AM, SSB, SITOR, etc are OBSOLETE.

As for those who enjoy Amateur Radio as a hobby, they must get off the air, unless they fall into one of the two categories above. These operators can do the same thing they're doing now with a computer connected to the Internet.

Those who NEED use of the bands would have to apply to the F.C.C. for authorization, with proof of need. The F.C.C. would then decide, upon the merit of the request, who will receive authorization to operate on "Amateur" radio bands and for how long.

PROPOSED PHASE OUT SCHEDULE

I propose a phase out period as outlined below.

January, 2006 - No more Amateur Radio licenses to be issued by the F.C.C.

January 2008 - All general HF activity ended, except to those operators with a legitimate need to use the frequencies. See items 1 and 2 above.

January 2010 - All general activity on VHF+ frequencies ended, excect to those operators with a legitimate need to use the frequencies. See items 1 and 2 above.

All existing Amateur Radio authorizations that become inactive are to expire at the end of their term, with no option for renewal.

NEW LICENSE REQUIREMENTS FOR LEGITIMATE USERS OF FORMER "AMATEUR" HF BANDS

The F.C.C. will issue experimental licenses to organizations such at technical schools upon it's judgement as to the validity of that organization's proposal/request to use frequencies formally in "Amateur service."

Any person or organization holding a valid Commercial radio license issued by F.C.C. AND who has a valid need to use frequencies formally in "Amateur service."

Transmissions will be restricted to message traffic or test transmissions.

WHERE WILL ALL THE PHASED-OUT OPERATORS GO?

The Internet, or CB, or the GMRS. The average chit-chat can be handled over those mediums, freeing the valuable frequency spectrum now occupied by "Amateurs."

As this is being written, research into Part 95 in underway. An official comment will be submitted to the Federal Communications Commission once the research has been completed.

This is an idea that is timely and necessary. It is no longer possible to tie up frequencies that hundreds of millions of people could benefit from, just for the purpose of operators having a nice talk at 3:30 AM in the morning.

David:

Save your fingertips on this one. Kim can always be counted on to make
inane, specious arguments against CW and "CW zealots" anytime a story
like this comes out. If the story had been about how the hikers setup a
backpack portable HF/QRP station and called for help using CW, she would
insist that it didn't prove a damn thing. She can't be bothered to learn a
useful communications skill like the Morse code, and she needs to grasp at
any straw she can in order to prove her point.

Kim:

Of course, the lost hikers were lucky that A. They were in California, which
is thoroughly blanketed with repeaters on the tops of high mountains, and
B. They had an HT and a GPS receiver. Repeat the scenario in the middle
of Kansas and their mileage will start to vary! Then they just might wish they

had a backpack HF setup, complete with a CW key! Still, I personally think
that this *is* a very impressive demonstration of amateur radio's emergency
response capability. Unfortunately for you and the rest of the NCTA, the
only place where it proves anything negative about CW or the PCTA's is
in your own mind!

"Wimbledon." :-) [did you have bad strawberries? Tsk]

>There are plenty of horse
> races and tennis tournaments , but only one " ham radio.
>(is this too complicated for you ??)

Ahem...those are all PROFESSIONAL tourneys...you know,
involving MONEY.

US amateur radio is an activity "not for pecuniary reasons."

That means there's NO money to be gained by amateurs. If
they did, they would become professionals.

>The first attempt at a
>codeless radio license resulted in Citizen's Band. Popular
>in the '70s but wasted away to what it is now ... and include
>the newer citizen's bands into this too.

Ah, one of your pet black helicopters just hovered around your mind?

I was already a professional in HF radio communications before the
first CB class was ever authorized. Ho hum.

>This , plus many people
>are frequently too LAZY (or poorly motivated < yourself perhaps >
>to continue the rich tradition of morse in HR) and eliminating the

>
> Did the "Dvorak" key layout not catch on ??

Nope. Why should it?

There was never any real need for a "Dvorak" key layout except perhaps to Dvorak. :-)

In middle school in the midwest in 1948 us students watched a typing champion do 150 WPM continuous on an all-mechanical portable typewriter while also carrying on a conversation with some of the students from the stage. He let us proof-read what he had typed and nobody could find any errors. That was with the old "QWERTY" key layout that was already old and standard. It is now older and still standard. It works.

[notice a resemblance to the old morse-manliness of high rates in CW? :-)]

The typing champion was actually GIVING A PERFORMANCE. It is NOT necessary to do high word rate on a keyboard to produce words for communications. Office typewriting throughput is typically anywhere from 30 to 60 WPM for clerks/secretaries working from handwritten scribbles of the staff...which they must all convert into proper formatting, paragraph indentation and so forth. If they are doing essentially copy typing (just a few changes here and there from an already-formatted typewritten page) they typically do 50 to 100 WPM.

The Teletype Corporation celebrated their 500,000th teleprinter made roughly a quarter century ago. Then it was a gold-flashed top-of-the-line half-mechanical, half-electronic model that was prominent in trade shows of the time (looked damn good in key lights). All those Teletype teleprinters used the "QWERTY" key layout.

All those "teletypes" were used in COMMUNICATIONS. Nobody grouched and whined about their speed of 60 WPM (early models) or 100 WPM (later models). Neither did any of them require a human modem operating them, just anyone familiar with the old

"QWERTY" key layout and one or two working fingers. :-)

> And then there are those of us who believe as a matter of faith that
> the F-keys belong on the left, the Ctrl key belongs just above the
> left Shift key, and the Alt key belongs just below the left Shift
> key, and other assorted differences from the Windowz key layout.

Tsk, tsk, tsk, Phil. Are you in a snit because you failed to cash in
on some recent Microsoft legal tangle with another jealous entity who
wanted $$$ that MS got? :-)

Do you need a different keyboard layout for you computer(s)?
That's almost entirely possible...the only exception being those keys
which are hardwired into the keyboard's own little microprocessor.
I can do it in a single program running at DOS, to any new key layout
desired...it will echo the desired character for an existing key. It won't
relabel the keytops, though, don't ask too much of software...:-)

Want to negotiate such a program for yourself? No problem, just
contact me at my mailing address (it's been in print at least 900,000
times). I only charge about a quarter of small-scale attorney billings
so it is a bargain! You'll even get the source code. Computer code,
that is... :-)

<aa2qa@frontiernet.net> writes:

>You are wrong in my example of the younger guy with the mouse. It happened.
>Really. You and I are closer than you think.

Okay, so some younger person doesn't know about mice. :-)

>As I stated, I am not worried over Morse.

I'm not worried either. To me, it's all those morse-uber-alles
in der Amatur SchutzStaffel who demand morsemanship as some
kind of manhood equivalent in radio. :-)

>As far as the high powered HF, most of the HF was nowhere near
>30 MHz. You know that and don't try and tell me otherwise.

I really have no idea of what frequencies you transmitted at in the
US military. At Army station ADA the HF transmitters were
pushing out somewhere between 200 to 300 KW total between
4 and about 20 MHz. Most transmitters could cover 3 to 22 MHz
if necessary.

I've been INSIDE a much lower frequency installation with MW
output.

>When you talk
>volts per meter, there is a difference between 30 and 15 MHz and a much
>bigger difference between 15 MHz and 1.5 MHz (near the top end of the AM
>broadcast band).

Oh, I think I know the EM spectrum with some familiarlity... :-)

When I got into the Big Leagues of HF communications we had terms
of "Megacycles" and "Kilocycles" and used the old phonetic alphabet.
Little tiny capacitors were valued in "micro-micro farads" or "uuF." :-)

In 1955 the US military cut over to the NATO phonetic alphabet and
we also had to learn the "scientific" names for values and their
multipliers. Radio theory remained the same...and still does.

>Please do us both a favor and don't assume that I don't
>know what I'm talking about. That will save us both a lot of time (and
>typing!) :)

No problem with me as long as you return the favor.

I write in perhaps more detail than the usual suspects in here, but
only because other types want to engage in meaningless flames

over words/phrases. By explaining things in public, that lessens the counterproductive bullshit that those others start. :-)

Now I'm waiting for Col. Klink of the A.S.S., the garbageman, and the pedantic parson to jump in with more unproductive nonsense, shouted orders, and the usual personal attacks. :-)

Hey Keith may be you can help me. I have been diagnosed as a dyslexic
and have ADD. My disability prevents me from concentrating for more
than a few minutes so I can't take any code test or written test let
alone study for them.There must be some legal loophole or political
angle you can figure because there are millions of general public with
disabilities like me who want open access to the ham bands but the
government discriminates against us.Just because I have a disability
why should I be denied my right to operate ham? Maybe a protest or
something would help.Thanks for your help Keith keep up the good work.

Source record: 72700

Hi all,

I am developing an inverse GPS system and need to ensure compliance in France, Germany and the UK. In the US I am using the 902-928MHZ band, 1 watt peak power with about 0.01% duty cycle and 26MHz bandwidth. I would like to use similar specs in the EU but have yet to find a suitable band

Can anyone point me in the direction of specific documentation or bands

Kind regards

Paul

Thanks for a quote of Kim's message, Dee.

Sorry, Kim, I'm still having problems reading your messages (the same problem as before). I don't know if it's my server, your server, some software setting, or something else entirely. I haven't blocked your messages. I checked to make sure of that. They're still showing up in the newsgroup message list. However, whenever I select one to read, I get an error message saying the message is no longer on the server.

Occasionally one will slip through that I can read, but 99 percent of your messages result in the same error. Again, this doesn't happen to messages from anyone else. In fact, your messages are the only times I've seen this error message at all.

If this isn't happening to anyone else here (and nobody else has said anything), I can only assume the problem is with my server. So, it looks like the problem will remain until I switch servers (something I'm planning to do soon anyway). When it stops, I'll let you know.

Of course, if you reply to this, I'll probably never see the reply. So, if you have something to say in reply, send it by email instead.

>
> That's the point -those existing regulations
> incorporate by reference an international
> requirement that no longer exists

I'll try it again, Alun. The new treaty with those changes has to be ratified before it becomes the law of this land. Until that time, the only "international requirements" recognized by this country are those in the treaty this country has already ratified (the one prior to the recent changes). That treaty requires CW for HF privileges.

To put this another way (and reply more directly to your comments above), the "international requirements" for code testing does exist in the only treaty this country legally recognizes (the one currently ratified).

Once the new treaty is ratified (the new treaty containing the changes), at that point, and only at that point, will the FCC be able to consider eliminating CW for HF privileges. Remember, however, that the treaty change does not require the FCC to drop code - the change leaves it up to each member state to decide for themselves.

The FCC may find a way to stop code testing before the new treaty is ratified, but it is not at all clear if that is even possible (in other words, don't hold your breath).

You have already lost the battle.

What can you say against an argument that includes "Homeland Security"?

"Further, the addition of BPL facilities-based technologies will, as
correctly recognized by the Commission, enhance homeland security by
"creating new facilities to provide redundancy."

Has anyone done a grep for 'terror' throughout these documents?

And the fact that BPL has been abandoned for economic reasons in Germany
will probably make the US-guys feel that they can do a lot better than us
stupid Krauts. After all, we lost the war.

Bye bye ham radio in the US.

He's so fulla shit the whites of his eyes gotta be brown. I for one was on the HF ham bands in 1951 *with CW* from W3CGS before I got my Novice ticket. The only "HF experience" he had in that timeframe was as a grunt U.S. Army apprentice RTTY equipment mechanic & babysitter 1952-53.

Alternate interpret all you want, until the FCC changes the rules,
nothing has changed. The FCC makes the final interpretation and they
have NOT changed the rules regarding a code test.

Dusty, welcome to RRAP and RRAP's resident NON-LICENSED
antagonist and documented pathological liar, Leonard H. Anderson.

Lennie has a long list of "been there-done that", however none of
it in Amateur Radio...Nope, not even a Novice Class license. He once
had several articles "published" in an Amateur Radio magazine, however
none of THOSE articles were actually ABOUT Amateur Radio. Seems
Lennie was SO FAR BEYOND anything his "professional peers had to offer
that they conspired to keep him from being professionally published,
ergo his only avenue to getting his name in print was "Ham Radio"
magazine. (yeah...right...)

That magazine went out of publication due to a lack of
readership.

By virtue of 15 years of night school and a GROL (First Phone in
those days) Lennie feels himself adequately qualified to tell those
who KNOW Amateur Radio on a day-by-day basis how they should be
conducting themselves. Kinda like a nun trying to teach kids about
safe sex and birth control...read a lot about it, but never been
there!

So as you read Lennie's scathing and insulting replies to
anything you may write now and in the future, just keep these things
in mind.

He's a second class jerk working hard at being a first class
jerk.

A real putz.

KEITH.

YOU ARE AN ASS... IN dealing with CW tests for ADA people there are MANY ways an examiner has latitude to issue a code test so that they have a chance to pass it... READ THE RULES AND REGULATIONS SOME TIME. I've given many ADA tests, to both Blind, Deaf and those who couldn't even write even if they did have all other senses. So long as the examiner does NOT give them the answers to the questions or directly/indirectly tell them what was sent so as to cheat, they can do damned near anything to help that person get what is needing to be sent to give them that fighting chance.... Don't open your mouth without facts which you have yet to provide any of in support of your lawlessness aim to sidestep a part you're apparently too damned lazy to do. I've seen more handicapped people pass a code exam than you can count. MORE than the lazy people like you who are "supposedly" NOT handicapped. PRIOR to the code being dropped to 5WPM, there were waivers available by Dr. Signature for the 13/20WPM. But 5WPM is so damned easy, it is pathetic. I STILL SEE LAZY in every one of your posts. I know a paraplegic who is a ham, passed his exam with no problems.. Today that boy even in his condition, is one hell of a smart kid. IT TOOK DETERMINATION AND WORK to get where he got. It takes that by ALL to get anything worth having. That boy is - even in his condition, a computer whiz. He earned his 20 WPM the old way, no waivers. IF HE CAN DO IT, ANYONE CAN.

It is very apparent you have yet to crack open a copy of Part 95... IF you are supposedly an amateur, you're supposed to have a copy of it there to refer to and to be familiar with. Ignorance will get you no where. Even when

you try to claim such in court. Again, if you get busted, I'm going to laugh my ass off.
I'd be willing to be, you would act as your own defense.... Boy, what a joke that will be.

Well, I suppose one could argue that those without code ability have pushed the hobby/service forward by just being there (shear numbers do help Amateur Radio). Of course, that is not likely to be an argument that satisfies you, but it was the only thing I could come up with at this moment. However, I think even those with code ability would agree that at least some have walked away from ham radio because of the code testing requirement. Would one of those have pushed the hobby/service forward? We'll obviously never know (especially since we're not even clear on what that phrase means).

> The difference is that us coders don't go around
> bleating about how we "push the hobby/service
> forward". Which is one of the bogus battle cries
> of the free lunchers. (snip)

Well, with the amount of noise those with code ability make in general, it would be a little hard to notice even if they did. ;)

The rest of your message seems more to be a declaration than a discussion so I'll let it go unanswered.

Wasting free time is pretty much what this newsgroup is all about, Steve.
However, don't think everyone in this newsgroup spends all their free time
here - most of us get our hands dirty with other things.

Explain to me why a deaf person should now need to know morse code? When the silly horse and buggy test was rammed down their throats by the US government they could use lights. Now how is a deaf person supposed to use morse code sitting in their home listening to the radio? With modern digital communications like PSK31, Pactor and RTTY a deaf person can enjoy ham radio. And as always they can use a computer to decode morse code as they have in the past. But for them to learn morse code through some silly light system is pure discrimination because the deaf have no way of decoding morse by ear.
The morse code test for deaf people is pure discrimination and now that s25.5 no longer requires a proficiency to know and send morse code the FCC better move fast to remove this discrimination.

True, although it still may be possible to interpret 97.301(e) in such a
way that the no-code Techs have the Novice bands before the FCC changes
any rules. Albeit it is risky for Techs to do that without a declaratory
ruling from the FCC saying that this is the correct interpretation of the
rule.

2932. Amateur Radio "outside the box"

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-27 13:30:21 UTC
From: vshah101@aol.com
Message-ID: <20030727093021.14537.00000831@mb-m04.aol.com>
Source record: 72718

Amateur radio "outside the box"

Although there are many possible amateur-radio activities, Hams tend to focus on a certain group of activities. Often, they are followed in the manner accepted by tradition.

The typical Ham activity is making short QSOs for contests and awards. Contests are events where Hams try to make as many contacts on specified bands as possible. Awards are often given by how many locations are contacted ("worked"). For example, there are Worked All States, Worked 100 countries, etc. Notice that traditional Ham radio awards are given for the number of contacts or for how many contacts in a given time period.

This is a competitive activity. Hams compete to obtain the best contest score, or to obtain award certificates. Hams seem to have this type of mode of operation, and it seems to be the same at almost every club. I have nothing against competition. Also, I have nothing against Hams doing what they enjoy doing. But, I would like to point out that there are other types of competition possible. And there are other types of activities and interests.

Because no such clubs exist right now that cater to these interests, there is no avenue for one to pursue these interests. Things like expense and the large amount of time it takes for an individual (vs a group who share an interest), tend to not allow these new interests to surface. Also, the current group of Hams wants to do things their way and have little acceptance for different types of activities. By not providing an avenue for others to pursue their interests, these other Amateur-radio activities do not get done. Some people would become frustrated when they go to clubs and no one shares their interests. This has the effect of reducing the number of people that stay in the hobby.

Here are some other possibilities in amateur radio.

More radio direction finding challenges.
The gaming aspect of this activity is appealing to some. Also, it uses more physical activity than sitting at a station making contacts.

Homebrewing challenges.
Lets have some homebrewing challenges. How about building small circuits, e.g. using SMT? I don't see small batteries at Hamfests, so I know this isn't being done. How about ATV using a homebrewed project?

Often Hams will not show interest in a project, just because it doesn't hook up to their radio. Just because a particular rf project may not involve a radio

(for example, radio controlled planes), shouldn't make it off limits. If its rf, its still radio. How about radio controlled planes, Doppler radar, or VHF/UHF amplifiers?

APRS.
Lets get more people using the capabilities of APRS. All I see at Hamfests is a map with active locations showing. New interesting applications should be tested. Perhaps tracking a radio in a car. How about having both cars move, and one follows the other using APRS. Most Hams do not do this. This would be an interesting group activity.

Training.
Lets have dedicated training. Either in the clubs, or as training seminars for better amateur radio operation, emergency preparedness, etc. Clubs often just have one lecture and then some club business. Better to have some demo setups and have people use some radios. More training should be offered. However, I don't know how many Hams would like that or would be willing to pay for training. Topics could include: generator power, connector assembly, antenna tuning and setup, troubleshooting. Perhaps some rf measurements training. Maybe some circuit design topics.

DXpeditions.
Enjoy a DXpedition. One thing I have noticed is that Hams often go to DXpeditions and don't do anything other than operate radios. At one club meeting I went to, one person gave a presentation about how he went to this exotic location and all he did is setup antennas, and make contacts. He had nothing to say about that location. At a Hamfest, I saw a film of another group of Hams going to another country and all they did is setup antennas and make contacts.

I went to a DXpedition - definitely a vacation spot- with a group of Hams. I saw this tendency firsthand. They did exactly the same thing! I wanted to go to the beach, take a drive, etc., but the Hams were only interested in making radio contacts on various modes.

I don't see the point of the DXpedition. Were they doing a duty to that location, making sure the location is activated and gets QSOs? Working the location for a few hours qualifies as getting the benefits of working that location. There is no need to work the location for 8+ hours. They made contacts for hours throughout the day and through Saturday night.

It seems the only non-radio activity Hams participate is in eating. (I did manage to get a few road trips because I volunteered to pick up food. Most of the Hams stayed at the shack.) They missed out on the scenic beach, the small town atmosphere. What's the point of going to a vacation location if the experience is the same as working QSOs at home? There needs to be some balance.

Yesterday, I went to that club's cookout. As usual, the club was mostly older males. There were one woman. She asked what we did at the DXpedition. Perhaps she might attend next year's event. One of the people that went there said all they did is operate radios. The woman asked, "Is that all you did? You didn't go to the beach or anything?" I imagine, going to a vacation spot and not doing

any vacation stuff is not appealing to women and young people. Also, the idea of making repeated contacts at a radio is boring to some people. Ham radio has a social component as well as a technical component. If you make the social aspect intolerable, few will want to stay in the hobby. Ham radio probably loses a lot of people this way.

Meetings at different places.
Hams have club meetings and other events. Often, these events are food related. Barbecues, weekly Saturday breakfasts, etc.

My suggestion is that instead of meeting weekly to eat, why not meet at a new "fun" place each week. How about the park, a boat ride, etc. Make it a new place every week. Cost is not the problem. Often these events cost less than the overpriced breakfast buffet. It may take some work (mostly scheduling and informing people), but not much. And it's well worth it.

Meet a Ham.
And lets try to contact Hams, not just short QSOs to work bands or locations for awards. This includes developing lasting contacts. And even the possibility to meet your contact off the air.

Lets overcome one's limitations, compete, and have fun. Feel free to add to this list. Feel free to do amateur radio "outside the box".

Deaf people have used Morse Code in ham radio.

>When the
>silly horse and buggy test was rammed down their throats by the US government
>they could use lights. Now how is a deaf person supposed to use morse code
>sitting in their home listening to the radio?

Simple. They rest fingers on a speaker cone and feel the vibrations. It's benn
done many times by deaf people. Just like many deaf people dance by feeling the
rhythm the music through their feet.

Also, many deaf people have some limited hearing. It is not unusual for them to
be able to hear single tones but not undersatand speech.

>With modern digital
>communications like PSK31, Pactor and RTTY a deaf person can enjoy ham radio.

Hams have been using Baudot RTTY for almost 60 years....

>And as always they can use a computer to decode morse code as they have in
>the past. But for them to learn morse code through some silly light system is

Yet the various advocacy groups for handicapped people have never protested the
amateur radio test regulations. Indeed, the group "Handi-Hams" was AGAINST the
medical waiver rule change back in 1990, as I recall.

> The morse code test for deaf people is pure discrimination and now that
>s25.5 no longer requires a proficiency to know and send morse code the FCC
>better move fast to remove this discrimination.

If you're going to go that route, then all of the questions in the written
tests about voice modes have to go as well, because there's no way deaf people
are going to use SSB, either. Take out the questions on PSK-31, RTTY, etc.,
because blind people won't use those modes. Get rid of the Extra and General
class written tests entirely because there are people who can't pass them, but
who can pass the Tech written. And since FCC says the Tech test is adequate for

all authorized modes, bands and power on amateur VHF/UHF, why is any more written testing needed for HF beyond a few band-edge questions?

Don't you get it Jim? This is EXACTLY where they are headed. NTI is
undergoing birth! The no-discrimination angle is cute but flawed, but
hey, they are flush with their recent success, so the sky is the limit
now. And besides, they might get people to buy the argument.

I'd love to see someone with a hearing disability receive weak signal CW on 80 meters in the middle of July. Requiring a deaf person to pass a code test to get a ham license is like making a blind person pass a drivers test before riding the bus, you never know when driver will pass out and the blind will have to take the wheel of the bus.
You are really crazy along with your pals at the ARRRRRRLLLL. This hang on to morse code forever crap is the reason that ham radio is going to die. You know the BPL increase is going to pass and you can kiss HF goodbye. Instead of having several million hams there are a paltry 700,000 in the US and less then half of them are active.
Ham radio operators have created and signed their own death warrant. I'm sure corporate America is drawing up plans on what to do with the 6 meter, 2 meter and 220 bands as we debate the demise of morse code.

Mike, there's just not as many of those types of individuals you are describing as "they" to make a change at all. Just as there are not enough of the Larry Rolls and Dick Carrolls to make CW as miserable as some (the "they" you describe) think it is.

You may wish to blame the de-emphasis on CW on people. But, it's a combination of losing traditional values, a decrease in the use of CW in major communication venues, and the fact that the FCC is a governmental organization that responds to national and world trends. It's much more about anything BUT people than many realize, IMHO.

There's way more people who are middle ground.

Absolutely. To come to the conclusion that deaf people cannot learn and use CW is rather narrow-minded in my opnion. I bet there's a way that ANYONE could learn CW.

I believe the waiver has been removed from the licensing structure for amateur radio, hasn't it? As well it should be. And, here's why: there are deaf people who have passed a CW test and use CW. As soon as that happened, it set a standard that deaf people can, indeed, learn CW--*if* they so desire.

Remember that a handicap should never be considered as an excuse.

First of all, I don't understand the transition from using lights to a deaf person not being able to use CW. They *could* use lights--and I've seen it done. They could also do as Jim describes above. They could also have the volume up so loud on a speaker that it would vibrate the speaker box itself. There's all kinds of ways and I bet an innovative deaf person will find them. Necessity is the mother of invention.

For goodness sake! By your example, Keith, blind people should not be licensed because, "how in the world would they know what frequency they are on?"

I've never understood a medical waiver. The only thing I've seen it do is get people licensed for General and above, who have no business being so--and who also, somehow, don't have a hearing deficiency of any type.

Balderdash!!!! To expect that a deaf person cannot learn CW is discrimination. You are insensitive to believe that discrimination means inability.

Larry, that's the first time I've ever seen that challenge. I've seen the thread, but could not find the original challenge to know what it was. I actually thought it was something Steve had said.

I don't care to meet your challenge, Larry, and I am not the one who has solicited challenges in the past. As I understand it, by looking here only, I've never seen anyone say that their challenge to you (mostly on a CW sched) was ever realized.

Oh, and the PSK-31 station is established (when the radio would be set back up), because my hubby really likes that mode.

You are so foamed at the mouth with your insensibility that you can't see
the forest for the trees, Larry. I have no argument whatsoever against the
use of CW. I do NOT believe, as you, that CW is the cure all that you think
it is. There are notable CW enthusiasts that share this also, Larry. What
would you say of them? *IF* this story had been about how the hikers had
set up a backpack portable HF/QRP station and called for help using CW, AND
if they'd gotten it, I would have said two things: 1) that they were lucky
to have someone on "the other end" that understood CW, and 2) that they
could have traveled a lot lighter if they'd just carried an HT. To tell you
the truth, I'm impressed that ANY radio worked to contact someone and, just
as you say, I'm sure it is because of the density of repeaters in their

area. You're right. Kansas would have been a whole different situation.

>

I did learn a useful communications skill, Larry. I learned it well enough to pass the requirements set forth by the United States Government. Now, if you have a problem with your government, you need to let them know. And, you cannot dictate your standards to other people. You do live in the United States.

My point about CW is what, Larry? Why don't you answer that question. Hell, Dick hasn't even answered my question about what it would take for him to have a disaster setup for CW, what all would he need. Hell, for that matter, you won't even answer my questions, Larry. You guys spew your hate and contempt for other people out of the mouths that God gave you. And that's all it ends up being with you: hate. You are disgusting.

Answer the damn question, Larry. What do *YOU* think my point about CW is?

While I am not one of them, there are hoards of amateur radio operators who
will get through whatever challenges there are to communication. Those are
probably the same ones who really like CW and whom we should all look up to
for their willingness to be innovative and experimental because if it were
not for them, most amateurs would be "out of business."

Don't expect NCI to take anything like a year to "write something up."

> We need to get the FCC attention and if you contact by email, fax or US
mail
> then they will pay attention. It is going to take people getting their
friends
> that are techs or want to be hams with HF access to contact the FCC today.

Flooding the FCC with 100s of thousands of e-mails will NOT make
amateurs friends at the FCC ... no matter whether the e-mails are pro-code
test
or against the code test ... all that will do is swamp the FCC's e-mail
servers
and result in them being pissed off at hams in general ... something that I
think
both pro-code testers and no-code testers OUGHT to be able to agree is
HIGHLY UNDESIRABLE and would be bad for ham radio, no matter how
you feel about Morse.

WHAT "exclusive CW allocations" ??? Are you talking about
50.0-50.1 MHz and 144.0-144.1 MHz??? If not, you're operating
under a serious misunderstanding of the FCC rules and should
consider some remedial study ... you are a licensed ham, right?
(You should, therefore, know these things ...)

Certainly there should NOT be an expansion of the phone bands
(this is my *personal* opinion), as that would constrain the development
of modern digital modes in (what you think is "exclusive CW allocations."

> stupid Krauts. After all, we lost the war.

Both of 'em actually.

> Bye bye ham radio in the US.

Don't put that in the bank. I've seen some analyses of BPL economics,
beyond dismal. Breakeven point for recovering the initial investments
is projected to be ten years out. How do you suppose Wall Street will
react to that when that black cat gets out of the bag? Power utility
mangements have to be among the worst of all possible types to
shepherd anything hi-tech comms, they're still wrapped around steam
engines.

Check out how their brethern in the oil industry, Exxon in particular
shot itself in the foot when they got the bright idea to get into the
Qyx memory typwriter business. MBA candidates are still writing case
study theses on that disaster.

If BPL is approved in the U.S. I expect it to roll over and die almost
on the spot like it has in Germany. Or it won't be allowed in the
first place per the the Japanese example and for the same reasons.

I'm not losing a bit of sleep over the prospect of BPL wiping out HF
radio.

Suggest you read Phil Kane's posting on the subject. As he states, the law has changed only in respect that each Administration can choose themselves about the requirement for a code test. It does not mean that the FCC has to abolish a code test. So like Phil says, nothing has changed yet.

But the requirement has not been eliminated in the U.S. and the change
in the international treaty is not a mandate that the requirement for a
code test must be dropped. The FCC can keep the requirement indefinitely
if they desire. Until they do drop it, nothing in the licensing
structure has changed.

The message below also scores a 10 out of a possible 10 on the
"troll-o-meter."

Doing what is suggested below will also be illegal, will put your
license in jeopardy, and will give ham radio a "black eye."

Please don't follow the foolish and irresponsible "advice" given
below ...

All the removal of the international requirement in the ITU Radio
Regulations
does is to allow each administration to determine on its own whether or not
to keep a Morse test.

Most will eliminate it ...

The US has NOT done so yet, so what is suggested above would be ILLEGAL,
put your license in jeopardy, and give all of ham radio a black eye.

And YES, the FCC *does* have records of which Techs have HF privs, so the
writer above is totally wrong.

FCC rules have NOT changed (yet) ... Techs are STILL not allowed
HF privs unless they have passed, and have documented credit for,
the 5 wpm Morse test ...

Don't let the writers in this thread talk you into ILLEGAL operation.

SEE PART 97
§97.501 Qualifying for an amateur operator license.
Each applicant must pass an examination for a new amateur operator license grant and for each change in operator class. Each applicant for the class of operator license grant specified below must pass, or otherwise receive examination credit for, the following examination elements:

(a) Amateur Extra Class operator: Elements 1, 2, 3, and 4;

(b) General Class operator: Elements 1, 2, and 3;

(c) Technician Class operator: Element 2.

§97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove that the examinee has the ability to send correctly by hand and to receive correctly by ear texts in the international Morse code at not less than the prescribed speed, using all the letters of the alphabet, numerals 0-9, period, comma, question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

Kim, et al,

While currently-valid TechPlus licenses will be renewed as Tech,
the holders thereof, having credit for a 5 wpm Morse test, will
continue to maintain their current HF privs ... the FCC has records
of who has code credit and who doesn't, so no-code Techs should
NOT, repeat NOT, try to use HF.

2960. BAD IDEA for ham radio in general (was Re: Contact the FCC and Tell Them to get rid of CW Test and Requirements)

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-27 17:01:49 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <1ATUa.1837$IL.255190@nnrp1.ptd.net>
Source record: 72743

While the intent may be good, this is a REALLY BAD idea ...

Flooding the FCC Commissioner's e-mail inboxes with such
letters will only piss them off ... at ALL of ham radio, not
just pro-code-test or no-code test factions.

There is a right way and a wrong way to do this ... and this
is DEFINITELY the WRONG way.

Those who support the elimination of the Morse test from US
FCC rules would be well-advised to join NCI
http://www.nocode.org
and follow the news.

NCI's Board of Directors is working the strategy for how to
best approach the FCC on this matter and we will keep the
membership informed when we have finalized those discussions.

Oh man can't you read. The tech side of Ham Radio was explained to you in a previous post.

First contesting and DXing -- many hams do not get into this at all. Our club of 600+ only has 10 hams who are into contesting. And about 20 who DX.

Here in my area is a microwave homebrew group, homebrew classes, ATV building group -- lots of others. Who do you think builds Ham Satellites, does EME, Meteor scatter, builds repeaters, et al. That's the tech folks

Your observations are just that -- yours without any basis in fact.

Quit beating up on Amateur Radio.

The German administration had already been on public record as stating
that they would eliminate Morse tests if the WRC eliminated the intl.
requirement.

I'm not sure who you're referring to when you say "my people" ...
the ownership of people was abolished many, many years ago.

I am simply trying to provide good advice to folks who might
be overly eager and get carried away in ways that would be
bad for ALL of ham radio.

Thanks, but I already have a buggy whip. It has texture and history, but rests in a display case now. The Morse horse died a long time ago, and there's no sense in beating it again and again and again. It just stirs up the stink.

I understand your caution, Carl. But, somehow, if one is willing to ignore existing R&R, or maybe doesn't even understand them, in an area where they would "experiment," don't they kind of deserve whatever trouble they would have coming their way?

Not a very good deflection try.

Your people are the people on your side of this argument, quite simply.

These are the people I made a note of some time ago when I wrote to
youand some others about what comes next for the ARS.

These are the people that while they may not share all your views,
arereally excited about what you have played a large part in bringing
tofruition. It's like a 50 percent discount, and they want it bad. Many
would like evn more. And whether you like or not, you have given
themgreat encouragement through your efforts.

Nothing stands still. Where does the ARS go from here? I see lots
ofpostings from people who want to do bizzare, illogical, and plain
```

wronginterpretation of rules, I see calls for elinimation of the subbands,lots of good stuff.

So yes, they are very much "your" people, Carl. And unless you get them under control, they may do grave damage to the ARS.

Do you think that they are going to pay one bit of attention to people like us PCTA's? It's up to you as a leader to get them under control. Good luck.

> I am simply trying to provide good advice to folks who might be
> overly eager and get carried away in ways that would be bad for ALL

North Tonawanda (or just NT to us locals) is my home town. I still
spend more time in NT than in the Township of Tonawanda where I live
now. Assuming they took you to the correct place, that would be the
Anchor Bar on Main Street in Buffalo.

>
>Yup, it sure does! And some idiot usually manages to get whacked by
>the balun when it does -- which is why we pass out the hard hats!

This reminded me of the year the guy with the bow and arrow had to
leave for work before they got the wire antenna for the phone station
up. The antenna was eventually raised by tying the rope around a
hammer and throwing the hammer up over the desired tree limbs. On not
one but two occasions the hammer ended up in the Erie Canal
(fortunately with the rope still attached, which you can rest assured
greatly facilitated recovery of the hammer).

On the first such attempt the SPLASH! produced by the hammer as it
entered the water attracted the attention of some people standing on
the deck of the boat that happened to be passing by at the time. They
fixed us with an icy glare, apparently wondering of we had thrown
something at them or their boat, but after watching us for awhile they

were able to figure out what we were doing.

At that point they continued their journey downstream, and after a few seconds their boat came around past the row of trees so we were able to see what it said on the side of the hull in big red letters:

SHERIFF

None of us was surprised when our volunteer hammer thrower seemed to wait longer than necessary before commencing his next toss. Once the sheriff's patrol boat was out of range, sight, and earshot, he fired again and nailed the desired branch perfectly. Great...one tree down, one more to go. We walked down there, and his first shot produces another SPLASH! Luckily, no boats in range this time (one bystander remarked it would probably have been the State Police this time). After another few tries he scored another bullseye and we hauled our wire antenna (160 feet, fed with ladder line) into the air, tied everything off very securely, and shut the gate on the chain-link fence that runs the entire length of the park right below where that antenna gets hung every year (makes a great counterpoise).

Every year since then, we've used one of those slingshots with a fishing reel mounted on it. No more hammers - we don't want to spend our food budget for the entire FD to bail one of our station captains out of the county lockup!

>I truly could have done without hearing that, to be sure!

Well, I haven't seen you post anything suggesting that no-code hams be
rounded up and sent to concentration camps or anything like that...not
yet anyway...so I guess I'll give you the benefit of the doubt. :-)

Despite all the shrill, uncontrolled complaints - on both sides of the
issue - the international requirement is no more. The testing
requirement in the USA probably will follow suit sooner or later.
Hmmm...maybe it *is* an ethnic thing: Does red whine or white whine go
best with crow?

>For one thing, it

I prefer number 8 or 9 birdshot with a skeet load for interior
defensive use. However, there are better handgun loads for the
purpose, most notably .357 Magnum and .40 S&W.

I think most hams would disagree with Fred on that, too.

But let's look at Fred's argument: "something to the effect that HE thought
that since most Techs use store-bought rigs, the Tech test could be
simplified."

Don't most hams (of all license classes) use store-bought rigs? If so, then
that same argument could be applied to all of the written tests.

>However, Fred ALSO indicated that he thought that the Extra written
>test could/should be made more rigorous.

But why? The only difference in operating privileges between Extras and Techs
is that Extras have all amateur operating privileges, and Techs have all
amateur operating privileges above 30 MHz. Same power level, same choice of
modes (including CW/Morse), same authorization to homebrew, modify, etc.

In fact, there are lots of modes authorized to hams above 30 MHz that are not
authorized below 30 MHz. RF exposure at HF is less of a hazard than at some
VHF/UHF frequencies.

Heck no! We install plug couplers on everything. that may need disconnection.
Also use different couplers for different applications to avoid destructive
mistakes.

At N2EY this past FD, the only tools needed for the entire setup and takedown
were:

Slingshot/spinning reel antenna launcher
Pocketknife to cut line and electrical tape
Hammer to drive the ground rod and tent stakes
Screwdriver to tighten the clamp on the groundrod.

Wingnut on the groundrod will eliminate the screwdriver next time.

I would suggest, Scott, that you dispense with looking at gifs and instead use
methods that employ sound. Here's one.

All you need is 'net access and a computer with sound.

The claim is that the code tests are somehow holding the ARS back. For example, here's one I've seen many, many times:

"Join No Code International! Hams for the 21st Century.
Help assure the survival and prosperity of ham radio."

Lots of other variations.

The claim is that code tests are not for the 21st century, and that the survival and proseprity of amateur radio depends in some way on complete elimination of code tests.

What's all this "treaty ratification" thing?!?

I thought that the US Congress ALREADY ratified membership with
the United Nations and the UN organizations long ago. The ITU is a
UN organization.

Does the US Congress "have to ratify" each and every change in any
ITU that effects US civil communications laws? I don't see any such
"ratification" process for any number of decisions done by the FCC
in regards to FCC International Bureau decisions. Please explain.

> To put this another way (and reply more directly to your comments above),
>the "international requirements" for code testing does exist in the only
>treaty this country legally recognizes (the one currently ratified).

Code testing is the "only" treaty the US "recognizes?"

FCC does considerable International communications decision-
making without any fuss and furor about "treaty ratification."

> Once the new treaty is ratified (the new treaty containing the changes),
>at that point, and only at that point, will the FCC be able to consider
>eliminating CW for HF privileges. Remember, however, that the treaty change
>does not require the FCC to drop code - the change leaves it up to each
>member state to decide for themselves.

Our states decide whether or not to test for amateur morse code?!?

Will this "ratification" be done in a General Election or a special
Election like ratifying an amendment to our Constitution?

Is there some kind of separate "treaty" concerning morse code that
is NOT done with the ITU?

> The FCC may find a way to stop code testing before the new treaty is
>ratified, but it is not at all clear if that is even possible (in other
>words, don't hold your breath).

Please explain this new "ratification" process.

I was sure the USA had already joined the International
Telecommunications Union and agreed to abide by THAT treaty.

Kellie has NEVER been able to "push anything forward" in amateur radio. His radio technology expertise seems confined to memorizing radio ads' phrases in QST so as to "push his station forward" for Kellie. :-)

Pushing a charge card through a swipe reader to afford the latest and greatest (designed by others) "ham radio" is not really "pushing the hobby forward," is it? :-)

Kim...FYI, the state of California is NOT thickly dotted with repeaters
or cell sites on every mountaintop...but the state does have some
quite-high mountains along the coast from the Sierra Madres next to
Los Angeles way up north to the Oregon border and magnificent
Mount Shasta.

About two years or so ago, a group of climbers got stranded on a snow-
covered mountain in Washington state. They called for help on an FRS
HT and were heard about 20 miles away by a pre-teenage girl who
overheard the call, more by accident than anything else. That made the
papers locally (not just some radio hobbyist organ). No amateur radio,
no morse code involved. Rescue enabled via radio, ANY radio service.

Hiking and climbing would most certainly require radios with battery
operation. Those radios won't work unless the batteries are charged.
Larrah's batteries got discharged a long time ago... :-)

>Deaf people have used Morse Code in ham radio.

Of course...the transcendental supernaturality of morse gets through
when nothing else will.

I interviewed four deaf radio amateurs for HAM RADIO magazine and had
material on three others. Six of them were still active and NONE of them
(including a dentist) used OOK CW keying or any morse codes. All of
them were code tested BEFORE they became legally deaf. All of the
active hams used RTTY.

If you've never seen a TDD (Telecommunications Device for the Deaf),
then you will see the superiority of the fast data transmission for
communications even if the TDD being used has only a single-line
text display.

>Simple. They rest fingers on a speaker cone and feel the vibrations. It's benn

What is yours...other than another trolling "question"?

I do agree that Stu's comments are perfectly valid and reasonable
points to consider.

But, I've also seen so #$%^&!! many "points" about keeping the
status quo absolute in here that I cannot expect reasonable people
to be considered.

The pro-coder regulars in here have been sorely wounded by the
WRC-03 decision on S25 and they are vengeful, looking for blood
regardless of manner in which it is spilled. Are you one of those?

Ok, Len, consider it done :)

BTW, I was in amateur radio whilst Kc and Mc were still the terms of the day. As far as the mickey mics, it sure became easier when Pf and Nf came into common use. I sure hated taking off my shoes and socks to convert all them thar zeros :)

Of course, today most rigs are solid state so there aren't the dangerous DC voltages of days gone by when the transmitter used several hundred volts. Of course, depending upon impedances, thousands of volts of rf can be generated even with 100 watts. Most of the high power amps, however, do use a *ton* of DC voltage. I'd still like to see plenty of safety questions in tests concerning that (mains safety, high voltage dc safety, rf safety, tower safety, etc.).

When I was on Guam, satellite communications were starting to be used and the days of the torn-tape relay center were numbered (not to mention those huge rhombic antennas fed by the big RCA transmitters).

Len, we've got something in common - both old as air and likely twice as polluted :). Speaking of polluted, I hear my refrigerator calling me. 807 ... 807 ... 807 ...
Fortunately, I laid in a couple of cases just in case something like that should happen :)

No, he assumes CBers built the satellites :)

BTW, I've never contested, but there is nothing wrong if that's what floats some folks boat either. I've been licensed since 1962 and still can't tell anyone what a 'typical' ham is since there is no such thing. One group that I help moderate has seen a large number of newcomers get their first tickets in the past few weeks. I guess it is fish or cut bait - or troll :)

Mike, I agree it *is* a reasonable argument. Myself, I would prefer that a portion of the bands be reserved for digital modes (including cw) in the same manner that many parking lots used to have a number of spaces reserved for small cars (I haven't seen that many in some time since cars have shrunk considerably since the 70s). My fear is that some of the yahoos with 5 KW capability would love to wreck havoc in the low ends of the various amateur bands using voice modes. Besides, it makes it easier to find a station using a mode that you may wish to use if the bands are segmented somewhat to use.

Actually, YOU BOTH need to read it more carefully.

Unlike the frequency privileges defined for other license classes and for those Technicians on frequencies above 30MHz, which are bases SOLELY on holding the license (based solely on the element credit), the HF allocations for Technicians and Novices are based on TWO things:
- Holding a Technician or Novice license (i.e. element credit)
- Compliance with (i.e. EXISTENCE) of an international regulation
The problem is that with the recent removal of the international regulation (via S25.5), NO licensee can meet the second requirement above, and without it, the FCC wrote a sufficiently defective regulation that now RESCINDS ALL HF operation for these license classes.

Until the FCC revises the U.S. regulation to be dependent ONLY on element credit and removes the reference to the international regulation that was just rescinded, only General, Advanced, and Extra licensees have privileges below 30 MHz.

It's not that there is no code requirement for HF operation by Technicians that don't have element 1. It's that for those who DO possess the credit, they

CANNOT operate (and neither could Novice licenseholders) below 30MHz at all.

> FCC rules have NOT changed (yet) ... Techs are STILL not allowed
> HF privs unless they have passed, and have documented credit for,
> the 5 wpm Morse test ...

I disagree - they don't even have that anymore. Techs who have the element 1 credit in hand CANNOT operate on HF, because 47 CFR 97.301(e) has TWO requirements, the second one being compliance with an international regulation that now no longer exists. Since there is no way to be in compliance with the rescinded regulation, the second condition can NOT be met, and therefore, no "technician plus" licensee (or equivalent) and no novice licensee has any HF privileges. By the stated condition, the privilege was rescinded on July 5, 2003, when the international regulation effectively disappeared.

Note that .301(e) is NOT written like the rest of .301, which defines operating privilege based solely on license class, which is in turn based solely on element credit (in .501).

Had the regulation been written in such a way that it indicated licensees who hold element 1 credit may operate (see list below), then I would agree that nothing had changed. It's NOT written that way.

Hello I know radio operator amateurism and his rules for a long time and
recently I met a person who makes cb in the whole world, which exchanges
postcards like the radio operator amateurs, which belongs to a club and
which says to me that it is legal. What think about it? Me in my opinion
they are pirates. Marc

It is not a reasonable argument. It has logical and technical
flaws which make that particular commentary quite worthless.

>"Mike Coslo" <mcoslo@adelphia.net> wrote:
>> Stu Parker wrote:
>> >
>> > But the point is well-taken. If CW is to be removed as a
>> > *requirement* for a ham license, then its special status has
>> > evaporated.

That is an absurd statement which cannot be supported logically.
(It says: The apples are ripe, so lets pick the oranges today.)

All that has happened is that CW has changed its status from a
separately tested requirement, to being one of many modes which
random questions on the written exam will refer to. That change
affects the *testing* only; it has *nothing* to do with the
technical requirements which are the basis for band allocation.
(Testing is apples; band allocation is oranges.)

There are many modes with "special status", none of which have
ever been a "requirement" for a ham license. CW is now (or
shortly will be) no different, in that respect. We still have
"special status" in band allocations for digital modes, slow
scan TV, SSB, AM, FM, and yes, CW. The basis for those
allocations has not changed.

The allocations may indeed be ripe for a few changes, but not
because the test requirements were changed.

>> > Why give it any band-plan perks at all? CW operators can
>> > already operate in the phone bands (most of them don't, but that's a
>> > free choice), so why not accord the phone users the same freedom of
>> > choice?

That is not technically sound.

An essentially narrow band mode like CW is not nearly the
interference problem to wide band modes like SSB and AM that the
wide band modes are to the narrow band modes. Hence, no phone
in the CW band by regulation, but the same is not required to
keep CW out of the phone band.

Not that it would hurt anything to ban CW from the phone bands,
just that it isn't needed.

>> > I'd be in favor of reserving a very small portion of each HF band for
>> > rtty, psk31, etc., but I'd let all modes permitted by an operator's
>> > license be used everywhere else.

A more reasonable approach is the current arrangement, though it
probably is time to consider some adjustments to the amount of
spectrum allocated to narrow band digital modes vs. wide band
phone modes.

A shift of 25 to 100 KHz from most of the HF CW bands over to
the phone bands would not necessarily be a bad thing. But it
would certainly cause a lot of noise if it were proposed, and
hence might take many years to accomplish. Therefore it
probably should be proposed now, and in 20 years when it becomes
reality, it will only be 10-15 years late... ;-)

Regardless, it is _technically_ not wise to allow wide band
operation in the narrow band digital band segments, and for
that reason I doubt the FCC will ever entertain the idea.

>> > In other words, it is legitimate and useful to reevaluate the entire
>> > band-plan structure of the Amateur Radio Service, and it is even
>> > thinkable that what is commonly called the "cw portion" of the bands
>> > should be reallocated.

That paragraph is correct. It's just the ideas given above for
the causative factors, the affected factors, and what the
methods should be that were wrong!

Quyanapuk! which is "a big thanks" in the way my neighbors
would say it in Inupiaq.

Some day I'll add some more pictures, and finish the descriptions
of each of the North Slope villages. One other thing I should do
is add a URL for Barrow weather, as it is often just as interesting
as pictures. Right now, for example!

http://weather.noaa.gov/weather/current/PABR.html

Typical late-July/early-August day. Here's another URL that you
may also get a kick out of, as it shows where the Arctic ice
pack is.

http://pafc.arh.noaa.gov/data/ice/graphics/acij23a.gif

We've had two boats show up off shore already, but as can be
seen in the satellite images, getting any farther east than
Barrow would be a bit difficult except for the one that was a
Coast Guard icebreaker. That ice will clear out by late
August and early September, and barges will be able to make
it to Prudhoe Bay which is 200 some miles east of here.

Perhaps the confusion arises from the fact that a survey of German hams showed a strong majority of those responding favored keeping the Morse requirement. Of course, just like in the USA, the govt. is not required to do what the majority wants on an issue like code testing.

The FCC, as a government agency, is bound by international treaty and law, and here, the international law HAS CHANGED, so any regulation that refers to it CAN (and in this case, HAS) been affected.

It's not "element 1 credit" by itself that determines a Technician class licensee's operating privilege on HF. If it were, then I would agree that nothing has changed - but that's simply not the situation here.

All good points, Jim. The US method does indeed work pretty well, and
hams who disregard it with bookoo power could indeed make a mmess of it.

In a word, YES ... they should have their licenses revoked.

HOWEVER, the REST of us don't need the grief that large-scale flaunting
of the rules would bring down on ALL of ham radio ...

That's ridiculous ... the NEW ITU Radio Regs simply give administrations
the CHOICE as to whether or not to have a Morse test as a requirement
for licenses that convey privs below 30 MHz ... they do NOT preclude
any administration from having it either way ... it's their choice.

The regulation was not "rescinded" on July 5, 2003, it was simply
MODIFIED.

Thus, there is no issue of "compliance with international requirements".
Current US FCC Part 97 rules are in compliance with the ITU Radio Regs.

Naturally. What would *you* give them on the basis of? Number of
hamburgers eaten during operating time?

>This is a competitive activity. Hams compete to obtain the best contest score,

...which should come as no surprise to anyone who has ever looked up
the word "contest" in the dictionary...

>or to obtain award certificates. Hams seem to have this type of mode of
>operation, and it seems to be the same at almost every club.

The rules for any given contest remain the same for all participants,
regardless of what club they belong to - and the qualifications for
awards remain the same regardless of what club one belongs to. Could
it be maybe that's why?

>I have nothing against competition.

Coulda fooled me.

>Lets have some homebrewing challenges. How about building small circuits, e.g.
>using SMT? I don't see small batteries at Hamfests, so I know this isn't being
>done. How about ATV using a homebrewed project?

You wanna play with SMT, fine, YOU mess with that tiny crap. I can't
even SEE the stuff let alone solder it. Lemme know how much you enjoy
the headache you get from squinting at stuff that was never meant for
humans to be playing with in the first place (it's designed for
assembly by machines).

>Often Hams will not show interest in a project, just because it doesn't hook up
>to their radio. Just because a particular rf project may not involve a radio
>(for example, radio controlled planes), shouldn't make it off limits. If its
>rf, its still radio. How about radio controlled planes, Doppler radar, or
>VHF/UHF amplifiers?

Well, to take 'em in the order you gave 'em:

* Radio controlled models do pertain to ham radio. In fact, there's a
whole group of frequencies in the six meter band reserved for exactly
this purpose. We have one or two guys in our club who build and fly
radio controlled model aircraft.

* Radar is not a valid transmission mode in the ARS as far as I know.
Better check the regs before you start messing with radar. Throw too
much power into a radar beam and your neighbors start having what
cruel doctors call FLKs (funny looking kids) and FCC comes after you
with pitchforks and torches.

* Perhaps VHF/UHF amplifiers aren't that popular as a homebrew project
because they can be bought commercially dirt cheap, and because one
generaqlly doesn't need to throw that kind of power at the local
repeaters anyway, and because an amplifier kit for HF is more likely
to be of interest to hams with licenses that grant them HF privileges,
and those are the hams most likely to have the skills to build one.

>APRS.
>Lets get more people using the capabilities of APRS. All I see at Hamfests is a
>map with active locations showing. New interesting applications should be
>tested. Perhaps tracking a radio in a car. How about having both cars move, and
>one follows the other using APRS. Most Hams do not do this. This would be an
>interesting group activity.

Beyond its basic text messaging capability, that's what APRS is, a map
showing active locations. Even if the active locations are in motion,
looking at the map at any given instant isn't going to show the object
moving. It also requires additional equipment (like a GPS and, for the
messaging, some sort of computer or one of Kenwood's megabucks radios
with APRS built in) that takes up more space in today's
already-way-too-friggin'-small-and-cramped vehicles. Also, somebody's
got to pay for the extra gear. You volunteering?

>Training.
>Lets have dedicated training. Either in the clubs, or as training seminars for
>better amateur radio operation, emergency preparedness, etc. Clubs often just

>don't know how many Hams would like that or would be willing to pay for
>training. Topics could include: generator power, connector assembly, antenna
>tuning and setup, troubleshooting. Perhaps some rf measurements training. Maybe
>some circuit design topics.

That's what's called "elmering" and yes, it does seem to be a dying
art, but then again, much of that "training" used to happen when a
prospective ham was studying to get his/her license, whereas nowadays
people get the license first and then try to learn what they're
supposed to be doing with it. All too often people buy a book, learn
to pass the test, pass the test, get the license, and don't know
squat, and don't want to hear it when somebody tries to explain it to
them either.

>DXpeditions.
>Enjoy a DXpedition. One thing I have noticed is that Hams often go to
>DXpeditions and don't do anything other than operate radios.

That's what a DXpedition is for!

> At one club

>contacts.

Imagine that...they went on a long trip for the purpose of setting up
stations and making contacts, and when they arrived that's exactly
what they did.

>I went to a DXpedition - definitely a vacation spot- with a group of Hams. I
>saw this tendency firsthand. They did exactly the same thing! I wanted to go to
>the beach, take a drive, etc., but the Hams were only interested in making
>radio contacts on various modes.

Dude, THEY went on a DXpedition - and they had one. YOU on the other
hand wanted a vacation. News flash...a DXpedition is not a vacation,
it's a lot of hard work. But we've already seen that work is not quite
up your alley, is it, or else you'd be doing this stuff yourself
instead of whining about nobody else wanting to do it for you.

>I don't see the point of the DXpedition.

Oh, you saw it, alright, it just went in one eye and out the other.

>Were they doing a duty to that
>location, making sure the location is activated and gets QSOs? Working the
>location for a few hours qualifies as getting the benefits of working that
>location. There is no need to work the location for 8+ hours. They made
>contacts for hours throughout the day and through Saturday night.

They were doing a duty to their fellow hams who wanted to work that
location for awards credit. And, apparently there *was* a need to work
that location for 8+ hours, because they were still making contacts,
meaning there were still stations that wanted to work them, and the
whole point of a DXpedition is to give that location to hams who need
a contact with that location.

>It seems the only non-radio activity Hams participate is in eating. (I did
>manage to get a few road trips because I volunteered to pick up food. Most of
>the Hams stayed at the shack.)

Well, at least you made some contribution to the effort...

>They missed out on the scenic beach, the small
>town atmosphere.

You missed out on the chance to *be* the DX instead of trying to
chase the DX.

>What's the point of going to a vacation location if the
>experience is the same as working QSOs at home?

The experience is *not* the same. You'd have learned that firsthand if
you'd taken the opportunity to be a ham while you were there, instead
of being a tourist.

>There needs to be some balance.

At Disneyland, maybe. On a DXpedition? I'll bet your companions were thrilled with you the whole time. I caqn just see you whining about missing the beach, missing the town, missing the native girls, while not a single one of them came there for any of that. You're probably lucky they didn't hogtie you and toss you off a cliff.

>Yesterday, I went to that club's cookout. As usual, the club was mostly older
>males. There were one woman. She asked what we did at the DXpedition. Perhaps
>she might attend next year's event. One of the people that went there said all
>they did is operate radios. The woman asked, "Is that all you did? You didn't
>go to the beach or anything?"

She must not have been a ham. Either that or she did a good job humoring a nutcase.

>I imagine, going to a vacation spot and not doing
>any vacation stuff is not appealing to women and young people.

Apparently you don't read the ham radio magazines very thoroughly. Female hams do go on DXpeditions, and participate as operators, and enjoy the experience. K1RED, a female ham (and a darn good looking one in my opinion) wrote up a darn good article in QST last year on her experience on a DXpedition. She wasn't along to cook and fetch beers. As I recall, she stated that she was honored to have participated.

>Also, the idea
>of making repeated contacts at a radio is boring to some people.
>
>Ham radio has
>a social component as well as a technical component. If you make the social
>aspect intolerable, few will want to stay in the hobby. Ham radio probably
>loses a lot of people this way.

If that's how you feel, you picked the WRONG hobby.

>Meetings at different places.
>Hams have club meetings and other events. Often, these events are food related.
>Barbecues, weekly Saturday breakfasts, etc.
>
>My suggestion is that instead of meeting weekly to eat, why not meet at a new
>"fun" place each week. How about the park, a boat ride, etc. Make it a new
>place every week. Cost is not the problem. Often these events cost less than
>the overpriced breakfast buffet. It may take some work (mostly scheduling and
>informing people), but not much. And it's well worth it.

Have *you* ever taken a leadership role in planning and conducting one of these activities, or do you just sit back and let the board of directors and committee chairs do all the work themselves and show up halfway through to stuff your face?

>Meet a Ham.
>And lets try to contact Hams, not just short QSOs to work bands or locations
>for awards. This includes developing lasting contacts. And even the possibility
>to meet your contact off the air.

This is called "ragchewing" and more of it goes on than you apparently realize. It even goes on during contests - there are many hams who absolutely detest contesting. I've seen articles in the ham magazines about hams who've travelled thousands of miles to meet someone they've worked on the air and befriended.

What it boils down to is this: You are quite correct, there is more to ham radio than contesting and paper-chasing. You seem bitter because there are a lot of hams who enjoy contesting and paper-chasing, but those are activities lots of hams do enjoy, even if you do not. Get on the air during a contest and head for the high end of the band. There you'll find the ragchewers who want nothing to do with the contest scene, just sitting up there having round-robin discussions about anything but contesting (unless they happen to be commiserating about contests and contesters). Join them. Voila! You'll have found someone who you might have some interests in common with.

On the other hand, you yourself have to make the effort to find your niche in the hobby. If you aren't willing to work at it a little, you're in for a big disappointment, because it's not likely that someone else is going to do it for you. This is no hobby for a lazy person. If that's what you want, take up fishing. :-)

"My people" (meaning NCI in this case, with the recognition
that I don't own them) DON'T advocate illegal "protest" operaton,
"mail-bombing" the FCC Commissioners, etc.

> So yes, they are very much "your" people, Carl. And unless you get them
> under control, they may do grave damage to the ARS.

A few folks here on usenet who advocate things (perhaps just to troll)
don't a grave threat to ham radio constitute.

> Do you think that they are going to pay one bit of attention to people
> like us PCTA's? It's up to you as a leader to get them under control.
> Good luck.

I have posted, discouraging illegal "protest" operations, "mail-bombing"
the FCC, etc. What else would you have me do?

As I told Kim, if someone operates illegally, they deserve what they get.
Enforcement is the domain of Reilly and his associates at the FCC, *not*
of NCI (or me).

I will ALWAYS try my best to discourage bad, or even ill-advised,
behavior, but at the end of the day all I can do is advise ...

> > I am simply trying to provide good advice to folks who might be
> > overly eager and get carried away in ways that would be bad for ALL
> > of ham radio.
>
> Good idea, I agree 100 percent.

Glad you agree ... now don't bust my chops over things you *know*
I can't control, just because we disagree on the Morse requirement :-)

I have previously voiced my view that I do NOT favor phone band
expansion, as the CW/data portions would be over-run with SSB.

That would thwart the development of new digital modes and IMHO,
be a bad thing.

I operate SSB a lot ... and I don't find the phone bands "too crowded" ...
certainly not so crowded that you can't find room for a QSO ...
even on major contest weekends, that's the case ... though some of
the folks operating the contests behave rather badly.

OK - I presume that you mean the following text, not the frequency
table:

(e) For a station having a control operator who has been
granted an operator license of Novice Class or Technician Class

This is self-explanatory.

and who has received credit for proficiency in telegraphy in
accordance with the international requirements.

The key to this discussion is, or course, "what are the
international requirements".

Up until the 2003 revision of S25.5 of the IRR, each Administration
was required to determine the proficiency of each applicant for a
license valid for operation below 30 MHz. In the US, this was done
by requiring the applicant to pass Element 1.

Upon the 2003 revision of S25.5 of the IRR, the requirement to
determine proficiency was made optional for each Administration.

That is the only change in the "international requirement" - each
Administration can now decide by its own rules/regulations whether
to require a code test. The code test is no longer mandatory for
each Administration. Each Administration's requirement for code
testing has not been automatically "dropped" or "eliminated" solely
by the revision of S25.5.

Until the FCC changes the rules concering Element 1, the
requirement in the US remains that Element 1 must be passed.

The question of -when- and -how- the FCC Rules will be changed is a
separate item from -what- the rule requirement is up until they
-are- changed. Ditto for how the FCC will handle the issue of
giving -what- privileges to folks who hold a Technician license
but have never passed the code test.

Does that answer your question?

As the visible head of the No Code test movement, you have a
responsibilty to ensure an orderly transition. Right now what is
starting to happen is something that I saw as logically following the
elimination of the code testing requirement. And it is coming about
directly as a result of that elimination.

Personally I'd be telling people that the rules are changing, they
haven't been eliminated. And I'd be doing it an awful lot.

Perhaps it isn't your problem though.

Mike,

As another NCI director, I'd tell Stu that IF he feels strongly
about his suggestion, he could submit a petition for
rulemaking to the FCC.

Cheers,
Bill K2UNK

And before July, there was no specific "code speed"
international requirement...yet that didn't allow techs who
could do 2 wpm morse on HF...the FCC mandated 5 wpm
even though the ITU had no speed minimum.

Cheers,
Bill K2UNK

The FCC could, however, make rules changes which are based
on the new treaty because the OLD treaty is gone, done, defunct,
over...even if the US never ratified the new treaty. No nation is now
bound by the old treaty at all.

> Further, the changes in the "international requirements" do not

You know I've heard this guy was accused of being a pedophile in the past by someone. There was actually a newsletter that contained all the alleged information about him and his work in the school district near his home in Maine. Is it true? I sure don't know. Don't want to know! From everything I've read the guy is supposedly a total creep.

The guy certainly SOUNDS deranged if you listen to his weird anti-government rants on the air. Twilight Zone stuff, black helicopters... definitely one fry short of a happy meal. Allegedly he sued the FCC for 10 million bucks and lost back in 1999. What kind of an idiot sues the Federal government?

He has been a lot more tame since he was thrown off 14.275 this spring and since the FCC in Boston got on his case, and after Walter Cronkite and the ARRL threatened to sue him. He was also allegedly soliciting donations for all kinds of nefarious organizations. One of the "directors" in his so-called "organization" actually admitted smuggling communications gear to a jungle dictator. Then he admitted giving communications gear to an African warlord! What a freaking fruitcake... allegedly the funding for this stunt came from this guys charity!

My buddy told me no one listens to his crap since he was exposed as a fraud and a liar. He just spews it out with a puny little signal while people just talk right over it these days. A has been who never was.

What will probably happen, given that BPL takes off, is that Amateur
interference to BPL users will cause enough uproar for the FCC
to impose quiet hours or power limits on hams.
Money talks, hams will walk. Licensed
service or not.

I'd bet on development ... because that's one of the fundamental
purposes amateur radio exists ... read the R&O in WT Docket
No. 98-143 (it's on the NCI website "Articles" page ... you'll
have to scroll down a ways ...)

No, if a deaf person wants to learn morse code they can. It is wrong for the
government to require them to pass a morse code test because in reality they
have little or no use for it.
Like I said why doesn't the government require blind people to pass a driving
test if they ride the bus? You never know when the driver will pass out and
they will have to take the wheel.

What does that have to do with ham radio? Maybe the hearing disabled can climb
up there 75 foot antenna towers and use the lantern morse code to exchange
messages to each other? That has nothing to do with the radio transmission and
receiving of morse code by EAR which is what the test requires.

That is the test, the portion of the regs we are talking about is 97.301(e).
That portion of the regs is dependent on a international requirement for morse
code proficiency to operate on HF. The international requirement for morse code
proficiency has been eliminated.

From: Radio Amateur KC2HMZ

>Naturally. What would *you* give them on the basis of?

Instead of the number of contacts worked, how about station setup time or distance. How about awarding for getting through under less ideal conditions. This may require a signal report.

As, you can see, there are many possibilities for awards, other than what exists right now.

>>This is a competitive activity. Hams compete to obtain the best contest
>score,
>
>...which should come as no surprise to anyone who has ever looked up
>the word "contest" in the dictionary.

It does not match the dictionary. I could have a contest for radio direction finding, but that's not what "contest" means in Ham radio. Ham radio redefines the word contesting to only mean the number of contacts worked.

>Maybe not in your area. That doesn't mean it's the same everywhere
>else.

Not at any club in MA. Its not practical for me to move out of my state.

>Sounds to me like you want someone else to do everything for you
>instead of getting off your duff and doing it yourself.

No, I would put in the effort in organizing, doing the actual project construction and setup, etc. IF any other Ham in the club was interested in those activities.

>You wanna play with SMT, fine

I've built circuits with SMT components.

>We have one or two guys in our club who build and fly
>radio controlled model aircraft.

I don't understand what you are trying to say. How does this relate to amateur radio?

>* Radar is not a valid transmission mode in the ARS as far as I know.

Someone interested in Amateur radio *should* be interested in other rf areas also, if its a technical hobby. Many Hams lose interest if the application is not connected to their radio. My first intro to rf was through "radio" (not CB radio). However, I found that I enjoy any rf related application, (such as

radar) not just "radio".

>APRS is, a map
>showing active locations.
<snipped some stuff>
>Also, somebody's
>got to pay for the extra gear.

The thing is my local club has an amazing shack with a field day setup all year. They have parts cabinets, cables, soldering iron, test equipment - a complete setup. The club even has a Network Analyzer.

The issue is not cost. They have more than enough resources to make it a technical club. The issue is that the resources are being used for "traditional" Ham activities, not for technical aspects. The club members want to contest, and do Morse code. They dislike doing homebrewing, or APRS, radio direction finding, or other technical activities.

>All too often people buy a book, learn
>to pass the test, pass the test, get the license, and don't know
>squat, and don't want to hear it when somebody tries to explain it to
>them either.

There is no interest in the technical areas. I would help in organizing such activities, but when I propose them, no Hams are interested in technical activities.

>THEY went on a DXpedition - and they had one. YOU on the other
>hand wanted a vacation.

They accomplished their DXpedition objectives when they operated radios all day. I worked several modes during the day also. They did not have to operate radios all night.

I went to a vacation spot, so yes I wanted a vacation. I also wanted to operate radios. I did that. I got some vacation activities. I went to the beach even though others didn't. I wish I did some more vacation activities there.

>But we've already seen that work is not quite
>up your alley

I've helped with antenna setups and takedowns, so I have done some projects. I have proposed technical projects and no Hams show any interest. I would do the work required, if anyone was interested.

>And, apparently there *was* a need to work
>that location for 8+ hours, because they were still making contacts,
>meaning there were still stations that wanted to work them

The other Hams that wanted to work them (and there were many, including some on ATV), also worked them on Sat night. It just shows that there were other anti-social Hams at other locations.

>Well, at least you made some contribution to the effort.

The initial setup was on Thu. I came later in the week, so I missed that. I did help when they were taking down the antennas.

>>They missed out on the scenic beach, the small
>>town atmosphere.
>
>You missed out on the chance to *be* the DX instead of trying to
>*chase* the DX.

No, I made contacts on several modes, so I didn't miss it. The thing is a few contacts on each mode they had was enough for me.

>>What's the point of going to a vacation location if the
>>experience is the same as working QSOs at home?
>
>The experience is *not* the same.

In both cases, you are inside a shack, working QSO. The only difference is that you could see the beach from the DX shack. Thats what I meant by the experience is the same.

>At Disneyland, maybe. On a DXpedition?

So, only radio contacts are to be done- fun is not allowed?

>I'll bet your companions were
>thrilled with you the whole time.

I got re-invited to next year's DXpedition. Also, I went to that club's cookout yesterday.

>I caqn just see you whining about
>missing the beach, missing the town, missing the native girls, while
>not a single one of them came there for any of that.

I didn't whine to them.

>She must not have been a ham.

Of course, otherwise she wouldn't have to ask what they did on a DXpedition.

>Either that or she did a good job
>humoring a nutcase.

Well, she humored that Ham!

>Female hams do go on DXpeditions

Sorry, I forgot to mention that there was one there at the DXpedition I went to. Ham radio is 95% male. This means 5% must be female.

>Have *you* ever taken a leadership role in planning and conducting one
>of these activities, or do you just sit back and let the board of
>directors and committee chairs do all the work themselves and show up
>halfway through to stuff your face?

Like I said, I would if other radio amateurs shared my interests.

>I've seen articles in the ham magazines
>about hams who've travelled thousands of miles to meet someone they've
>worked on the air and befriended.

Okay, this does happen.

>You seem bitter because
>there are a lot of hams who enjoy contesting and paper-chasing, but
>those are activities lots of hams do enjoy, even if you do not.

That sounds correct.

> considered as an excuse.

Hey, one of your messages I can actually read, Kim.

Anyway, I think the point he is trying to make is that the ADA requires reasonable accommodation of a person's handicap, not efforts to pass that burden on to the handicapped person. Where possible, the handicapped person should not be required to make an unusual effort to fit into this society.

When it comes to code, how that applies is not clear. Clearly, telling the handicapped person (disabled person) to learn code by feeling a speaker cone is an unusual effort. However, the ADA also doesn't require others to modify activities to the point that the activity no longer makes sense, or to where the handicapped person actually has an advantage over others.

[Note: the above is only my interpretation of how the ADA reads]

The FCC seems to have taken the latter position on this issue. Not requiring code for the handicapped person would give an unfair advantage over others. That interpretation allowed them to drop the waivers for those with disabilities.

Of course, whether that is a correct position is probably up to the courts to decide. Most court rulings have tended to side with the disabled, and I suspect they would in this situation also.

However, with the possible end to code testing soon, perhaps the entire issue is moot.

Sheesh...what an IDIOT.

OK, Lennie..we can conceed that not EVERY mountaintop has
repeaters...We'll allow 90%. Including a lot in really remote places,
like the Owens Valley, Mt Wilson, Adalanto, Victorville, Julian, Yucca
Valley, Palm Springs...etc etc etc.

No, you need to tell it to the right people in the government. Someone
throw together a
Petition for Rule Making on this, and let's comment on it after it's at
the FCC.

I agree with this 100%. The best way to trash ham radio where it
really counts is to ignore the system and behave like CBers.

So far, so good

> Until the FCC changes the rules concering Element 1, the
> requirement in the US remains that Element 1 must be passed.
>

That's not what 301(e) says, though, is it?

The problem I have in your analysis is that 301(e) itself is one of the rules concerning element 1. It mentions Element 1 per se nowhere, but there is no other rule tying Technician HF privileges to Element 1.

This last statement of yours is indisputable re the General and Extra, in that Element 1 is still required to obtain those licences. However, there is nowhere in Part 97 any statement that a Technician needs Element 1 for anything, instead there is only the wording in 97.301(e).

> The question of -when- and -how- the FCC Rules will be changed is a

Not really. The question comes down to the meaning of "and who has received credit for proficiency in telegraphy in accordance with the international requirements". If there is no international requirement to have "received credit for proficiency in telegraphy" for access to any frequency, then a person who has not "received credit for proficiency in telegraphy" is "in accordance with the international requirements" if they operate on those frequencies.

Can we deem that a Tech who has not "received credit for proficiency in telegraphy" has nevertheless "received credit for proficiency in accordance with the international requirements", i.e. is "in accordance with the international requirements"?

Granted that s25.5 as revised allows each administration to determine whether a code test is required. That being the case, the FCC does so in respect of Tech HF operation only through 97.301(e) and in no other rule. If that rule is conditional upon a code test being required by

international requirements, then there is nothing therein indicating that the FCC chooses to require a code test for that particular purpose.

To cut a long story short, the argument rests upon whether "in accordance with international requirements" is a necessary condition in the sentence. If it is, then no-code Techs have the Novice HF frequencies*, and if not, then they will have to wait. This is really what I am seeking comment on, although all other observations are welcome.

*(Although possibly not until after ratification of the new treaty)

The rule includes the words "has received credit", which gives the FCC
control over what speed they will give credit for.

cw keyer.

There are many disabled who have passed CW exams. The only thing that these bozos are whining about is they are too damned lazy to learn the code. 5 WPM is the easiest thing in the world, like walking.... some just too lazy to work for anything worth having. Mommy and Daddy must have spoon fed them all their lives.

I don't have my manual in front of me to do verbatim rules, but code tests for disabled can be done 1 letter at a time, sentence, etc. Stopped if need be to allow the person time to divulge the message or character sent. As long as it is sent with a "speed" setting to be as prescribed to work out at 5 WPM if sent all at once. In other words, speeding up or slowing down the speed of the character will give it a different sound and could make it hard to decipher at all if incorrectly sent. SO - you have a message consisting of the prescribed number of characters and sent as necessary to the handicapped party to allow them to decipher what is sent... THAT IS how a disabled can be tested..... You can use "lazy" all you want in any form of protest, it still comes out to LAZY.
._.. .- --.. -.-- MOST of the info I related on exam giving to Handicapped is covered in VE manuals, but should be found in FCC Rules as well.

JMS.

All international treaties have to ratified by Congress, Len. While we are a member of the United Nations and the ITU, we are not automatically subject to all treaties offered by either of these organizations. Indeed, we are not even subject to significant changes to treaties we have already ratified - unless a mechanism for changes was included in the ratified treaty, any changes to that treaty have to be ratified.

> Code testing is the "only" treaty the US "recognizes?"

The currently ratified treaty is the only treaty this country recognizes. That treaty has a code testing requirement.

> Our states decide whether or not to test for amateur
> morse code?!?

I'm not referring to the individual states within the United States. A "state" in this context is "a country or nation with its own sovereign independent government."

> Please explain this new "ratification" process.

Read the Constitution of the United State of America.

I asked Phil about something similar a few weeks ago, and he seemed to
think it was not possible. After further research, I tend to agree with him.
It does look like the changes to that treaty will have to be ratified first.

Think of me as forward thinking person that is sick of the ARRL and ham radio operators that have done nothing but destroy the hobby by crying about keeping morse code to keep people out of the hobby.
Don't worry Phil, BPL is going to destroy ham radio and it deserves to be done away with. If there were millions of ham radio operators then maybe it could be worth saving. Why should a few thousand morse code fanatics keep millions of consumers from enjoying broadband Internet access? America needs BPL to create competition and access to the Internet. A bunch old men with a death grip on their morse code keys need to get the hell out of the way.
Thankfully a group of single minded men did everything to keep people out of the hobby and they can enjoy the S9 BPL signals that will drown out the bands.
Corporate America thanks the ARRL for the help to create a new investment opportunity.

There may no longer be an international requirement for Morse code

proficiency, and until the FCC drops that requirement, NOTHING HAS
CHANGED concerning U.S. Amateur Radio.

I have in the past taught several disable persons in Novice classes. One had CP and could not even write fast enough to copy 5 wpm on paper. He simply copied in his head and wrote it down when the test was finished. All these handicapped folks worked very hard to achieve this goal and never complained once about having to do so. On the other hand, I had other non-handicapped who whined through the entire course about having to learn the code. I said, "look, it is a requirement to get the license, if you don't want to learn the code then you don't want the license, so make up your mind." I only had one who gave up.

No, but they are expected to be able to keep their transmissions within the correct frequency ranges just like everyone else. One of my very best friends was a blind ham. I taught Novice classes with him for several years. He had devices to aid in tuning up his equipment and knowing what frequency he was on. He use Drake equipment and which tuned a certain number of KHz per dial revolution. He had marker oscillators for different frequencies and once he found a marker for a certain frequency he could count dial revolutions and know what frequency he was on and he was pretty accurate at setting the frequency. Later he obtained a rig with an audio frequency readout.
So anyway, what does the question have to do with the Morse code requirement?

So we have an EXTRA class licensee encouraging illegal operation on the
ham bands. Obviously the code test wasn't a good enough filter in this case.

You mean like Olympic runens do the 200 meter? And how baseball
players strive for a pennant or the World Series? Or how footlball
players shoot for the Superbowl?

Your point?

> The typical Ham activity is making short QSOs for contests and awards. Contests
> are events where Hams try to make as many contacts on specified bands as
> possible. Awards are often given by how many locations are contacted
> ("worked"). For example, there are Worked All States, Worked 100 countries,

> contacts or for how many contacts in a given time period.

So far nothing we don't already know. That's what contesting is
ALL ABOUT!

> This is a competitive activity. Hams compete to obtain the best contest score,
> or to obtain award certificates. Hams seem to have this type of mode of
> operation, and it seems to be the same at almost every club. I have nothing
> against competition. Also, I have nothing against Hams doing what they enjoy
> doing...(SNIP)

Sure you do. You've been railing against anything and everything
that YOU don't like doing for almost 2 years now.

> But, I would like to point out that there are other types of competition
> possible. And there are other types of activities and interests.

OK...were waiting with a'bated breath.

> Because no such clubs exist right now that cater to these interests, there is
> no avenue for one to pursue these interests.

Sure there is. Just go out and do it. Put an ad in a paper or
(WHERE have we heard THIS before???) on a USENET forum soliciting
like-minded persons to join in with you. Costs almost nothing.

Of course you've been doing that for almost years now and I don't
see anyone joining in with you.

Big paragraph of gobbledy-gook snipped.

> Here are some other possibilities in amateur radio.
>
> More radio direction finding challenges.
> The gaming aspect of this activity is appealing to some. Also, it uses more
> physical activity than sitting at a station making contacts.

Already being done. If there's not enough for you, step up to
the plate at the next club meeting and offer to organize it yourself.

If no one joins in, they are either NOT INTERESTED or they don't
like you, Vippy...I'll let YOU decide which.

> Homebrewing challenges.
> Lets have some homebrewing challenges. How about building small circuits, e.g.
> using SMT? I don't see small batteries at Hamfests, so I know this isn't being
> done. How about ATV using a homebrewed project?

Ever read QEX magazine, Vipul? Or Homebrew? Or CQ? Or 73?

Wanna spur some activity of your own? Pony up $50 for a cash
award or buy a gift certificate for dinner for two at a nice
restauraunt. If no one takes you up on it, it was either not worth
the $50, you chose a rotten restaurant, or they didn't like you,
Vipul. I'll let you decide which.

> Often Hams will not show interest in a project, just because it doesn't hook up
> to their radio. Just because a particular rf project may not involve a radio
> (for example, radio controlled planes), shouldn't make it off limits. If its
> rf, its still radio. How about radio controlled planes, Doppler radar, or

How about if they're not interested, they're NOT interested...?!?!

> APRS.

Oh yeah...NO ONE interested in THAT mode, Vippy!
(guffaw..giggle..snicker)

> Lets get more people using the capabilities of APRS. All I see at Hamfests is a
> map with active locations showing. New interesting applications should be
> tested. Perhaps tracking a radio in a car. How about having both cars move, and
> one follows the other using APRS. Most Hams do not do this. This would be an
> interesting group activity.

DANG...They're doing THAT too! Here in SE Tennessee we have
SEVERAL members who drive 18 wheelers, and we are constantly following
them! I >>KNOW<< that Tennesseeans are NOT the only ones to know how
this works!

> Training.

Guess you've missed all those ARRL on-line courses lately, huh
Vipster?

> Lets have dedicated training.

You mean like ARES or RACES? Gee...THERE'S a novel idea.

> Either in the clubs, or as training seminars for
> better amateur radio operation, emergency preparedness, etc. Clubs often just
> have one lecture and then some club business. Better to have some demo setups
> and have people use some radios. More training should be offered. However, I

> tuning and setup, troubleshooting. Perhaps some rf measurements training. Maybe
> some circuit design topics.

OW! Even MORE stuff they are already doing! It's called FIELD
DAY. And those CONTESTERS you seem to disdain are ALWAYS looking to
increase station efficiency and score some more of those dreaded
points you seem to not like (or is it that you don't seem to posses
any of the requisite skills to accumulate any of your own?)

> DXpeditions.
> Enjoy a DXpedition. One thing I have noticed is that Hams often go to
> DXpeditions and don't do anything other than operate radios. At one club

> nothing to say about that location. At a Hamfest, I saw a film of another group
> of Hams going to another country and all they did is setup antennas and make
> contacts.

This statement here absolutely reinforces that YOU, Vipul Shah,
are absolutely CLUELESS about the PURPOSE of a DXpedition!

You've brought this up before and more persons than me have told
you this!

Would you go to a NASCAR race to sunbathe? Or the Superbowl to
play a chess game? Or do you go to a Chinese restaurant and order
spaghetti?

> I went to a DXpedition - definitely a vacation spot- with a group of Hams. I
> saw this tendency firsthand. They did exactly the same thing! I wanted to go to
> the beach, take a drive, etc., but the Hams were only interested in making
> radio contacts on various modes.

If the place you went to was inside the continental United States
or Canada, it was NOT a "DXpedition".

And it it WAS inside the US or Canada, chances are it was to some
rare (from a Ham Radio perspective) or historically interesting place
and was ACTIVATED for THAT purpose...NOT for SIGHTSEEING!

It's called an OPERATING EVENT, Ya GOOFBALL!

> I don't see the point of the DXpedition.

That is one GROSS misunderstatement!

> Were they doing a duty to that
> location, making sure the location is activated and gets QSOs? Working the
> location for a few hours qualifies as getting the benefits of working that
> location. There is no need to work the location for 8+ hours. They made
> contacts for hours throughout the day and through Saturday night.

If they kept calling CQ and people kept answering them, then YES,
there was a "need". Did they "NEED" to do it in order to keep thier
jobs or feed their families..??? NO..THEY DID IT FOR FUN!

> It seems the only non-radio activity Hams participate is in eating.

That's because you're so danged clueless, and no one wants you
around when the go-go daners and the beer arrives! Ya shudda stayed
for the Wouff Hong!

> (I did
> manage to get a few road trips because I volunteered to pick up food. Most of
> the Hams stayed at the shack.) They missed out on the scenic beach, the small
> town atmosphere. What's the point of going to a vacation location if the
> experience is the same as working QSOs at home? There needs to be some balance.

So how did they know about this place if they'd never been there
before, Vippy? Just throw a dart at a map and say "LET'S GO WASTE A
DAY OF OUR LIFE THERE!"..?!?!

They knew where to go because they'd already been there! And if
it's a REAL DXpedition, it's some coral atoll with nothing more than
gooney birds, crabs and LOT'S of bird droppings! Not a lot you can
see. Almost anywhere else has SOME sort of Ham Radio population
there, and is hardly the "target" of an expensive DXpedition to
"activate" it!

> Yesterday, I went to that club's cookout. As usual, the club was mostly older
> males. There were one woman. She asked what we did at the DXpedition. Perhaps
> she might attend next year's event. One of the people that went there said all
> they did is operate radios. The woman asked, "Is that all you did? You didn't
> go to the beach or anything?"

Probably the same clueless bimbo who wonders why everyone is
watching all those noisy cars go around and around at Talledega,
Huh...?!?!

> I imagine, going to a vacation spot and not doing
> any vacation stuff is not appealing to women and young people. Also, the idea
> of making repeated contacts at a radio is boring to some people. Ham radio has
> a social component as well as a technical component. If you make the social
> aspect intolerable, few will want to stay in the hobby. Ham radio probably
> loses a lot of people this way.

Yeah...danged shame we lose all those "ham operators" who don't
want to operate radios, huh...?!?! Probably the same guys who wonder
why those girls are taking thier clothes off in a strip bar.

> Meetings at different places.

I vote for the strip bar.

> Hams have club meetings and other events. Often, these events are food related.
> Barbecues, weekly Saturday breakfasts, etc.

Fools! Who wants to eat when we can get slovenly drunk in a
strip bar...?!?!

> My suggestion is that instead of meeting weekly to eat, why not meet at a new
> "fun" place each week. How about the park, a boat ride, etc. Make it a new
> place every week. Cost is not the problem. Often these events cost less than
> the overpriced breakfast buffet. It may take some work (mostly scheduling and
> informing people), but not much. And it's well worth it.

Hmmm...the best local breakfast bar around here is under $10. It
costs $5.00 just to park at most amusement parks. You price tickets
at Sea World or a Six Flags Park, lately Vippy?

> Meet a Ham.
> And lets try to contact Hams, not just short QSOs to work bands or locations
> for awards. This includes developing lasting contacts. And even the possibility
> to meet your contact off the air.

Oh...You mean like I did in the Phillipines? Or Japan? Or when I
was transfered to Philadelphia or LA...?!?! Or maybe like I did today
when I had a 20 min QSO with a very new ham (a KI4xxx call...)

> Lets overcome one's limitations, compete, and have fun. Feel free to add to
> this list. Feel free to do amateur radio "outside the box".

The "one's" limitations that need to be overcome Vippy are YOURS.

Vippy, you need to find an E-S-C-O-R-T S-E-R-V-I-C-E. Someone
who can get you away from the desk you must hide behind and OUT INTO
THE DAYLIGHT.

You blasted us with yet another running diatribe on things you
insist aren't there, yet every edition of the ham mags proves you
wrong.

I am sorry you don't seem to posses the social skills to get
along in the local clubs, and I am even MORE sorry you don't seem to
grasp or comprehend what's going on around you, but that's not my
problem nor anyone else's but you.

You want to be a tour director? Then step up to the plate at the
next club meeting and VOLUNTEER to do it yourself. The folks who put
on the Dayton Hamvention do a great job of organizing "side trips" and
other non-radio related functions for the non-participating
spouses....YOU can do that for YOUR club.

Now...get along and try to digest some of this virtual spanking
you've taken AGAIN and OPEN YOUR DANGED EYES ! ! !

There is no way the FCC can find it if a tech has passed a morse code test since they don't keep any records. I know that no code techs are on 10m and have been for the last 3 years. No code tech's pick up your microphone and talk on 10 meters.

Phil is not unbiased in this since he is part of the ARRL legal goons that want to ram morse code down the throats of Americans so they can pick a microphone to talk on HF. Read 97.301(e) it depends on the International requirement for morse code proficiency. The requirement for morse code proficiency is GONE.

And 97.301(e) is dependent on a international requirement for morse code proficiency. There is no longer a international requirement for proficiency to send and receive morse code.
The s25.5 regulation says that it is left up to the administration. . The FCC rules do not require a morse code proficiency unless the international proficiency is required. So the FCC has already written the rules.
Now the ARRL thought their stupid trick to leave it to the administration would help keep more Americans from enjoy the ham radio hobby, but they screwed up in my opinion.

Oyez! We all did. And again about 30 hours later....

They were GOOD, though. Not too hot for me!

Hello
I have known radio-amateurism and its rules for years and I have recently met someone who claims to be a cibist and communicate all around the world, send and recieve postcards, talks about any subject, belongs to a club and says it is new CB and it is legal. In my opinion it is not. Is it?

> > Today there are no international proficiency requirements for morse code.
>
> Actually, the new treaty sez each country can decide for itself.

Exactly and 97.301(e) depends on the international proficiency requirements
laid out in s25.5. Now that there are no longer any proficiency requirements in
s25.5 then 97.301(e) is affected.

25.5 Any person seeking a license to operate the apparatus of an amateur
station shall prove that he is able to send correctly by hand and to receive
correctly by ear, texts in Morse code signals. The administrations concerned
may, however, waive this requirement in the case of stations making use
exclusively of frequencies above 30 MHz.

New Text of Article 25.5 (effective July 05, 2003)

25.5 ï¿½3 1) Administrations shall determine whether or not a person seeking a
licence to operate an amateur station shall demonstrate the ability to send and
receive texts in Morse code signals.

s97.301(e)

For a station having a control operator who has been
granted an operator license of Novice Class or Technician
Class and who has received credit for proficiency in
telegraphy in accordance with the international
requirements.

The US government has no standards for a technician to know morse code. To
receive a certificate yes, but the only reason a tech could not transmit on HF
was because of 97.301(e). Now that no code technicians have no requirement in
international law to know code they should be allowed to transmit on their
allocated frequency. That doesn't mean they can hop on 20 meters, it means they
can operate voice/data/cw 28.1-28.5 or even CW on 80, 40 and 15 meters.

The reason that 97.301(e) was written that way is because the government
expected s25.5 to be just deleted and techs could then operate HF. The ARRL
with their fancy footwork is trying to stop the removal of morse code as a
requirement for a HF license.
But don't worry it looks like BPL is going to destroy the bands anyway and you
morse code nuts can keep your death grip on those keyers. The ARRL has done
nothing but help put ham radio in it's grave.

> Until the FCC changes the rules concering Element 1, the
> requirement in the US remains that Element 1 must be passed.

That is NOT what 97.301(e) says. 97.301(e) does not require a tech to possess
element 1, it requires the tech licensee to meet the international standards
set down in s25.5 to transmit on HF. The reason 97.301(e) was written that way
is because the FCC expected the s25.5 reference to be deleted, but it was
changed. The fact that it was changed does not mean a tech licensee is not
meeting the requirements set down in 97.301(e).
It doesn't mean a tech can get on 20 meters, it should mean he can operate on
HF in the allocated tech bands according to the FCC rules.

There are lots of wrong ways, including things like breaking the
rules, emailing the wrong people, putting together proposals that are
not well-developed, etc. Heck, I cringe to read the comments sometimes
because of the obvious lack of spell- and grammar-checking.
>
> Those who support the elimination of the Morse test from US

But will tney listen to you, Carl? How many have joined? There are
over 687,000 US amateurs, plus an unknown number of prospective hams -
how many have actually joined your organization?
>
> NCI's Board of Directors is working the strategy for how to

In other words, "join our organization and trust us to do what's best,
don't go running off half-cocked and make all of us look bad". That's
what the ARRL has been saying for decades...

> Join No Code International! Hams for the 21st Century.

Will these "hams for the 21st Century" listen to you and toe the party
line?

> Help assure the survival and prosperity of ham radio.

I think we can agree that annoying the Commissioners, breaking the rules, and acting like we don't know how the system works isn't going to help the survival and prosperity of ham radio.

There's one thing about all this that puzzles me, though. The FCC made their opinions clear back in 1999 and again in 2000. The agenda for WRC 2003 was known more than a year in advance and the outcome for S25.5 correctly predicted by you (Carl) as a "slam dunk". Yet your organization is still figuring out what to do next wrt FCC?

How long will it take to decide, and will "your people" listen to you? They don't have much to lose, and they don;t even think they will get caught. Many don't understand how the system works, but think they do and don't care about long-term effects or the image of the ARS as a whole.

Newsgroup postings are bad enough, but some are advocating massive spamming and rulebreaking. Is that to be the way of "hams for the 21st century"?

We are talking about 97.301(e) and it does not require a technician to possess element 1. It requires the tech to meet s25.5 which NO longer requires the tech to know morse code. The reason 97.301(e) was written that way is because the FCC expected s25.5 to be deleted.
Don't you see the ARRL is trying to pull a fast one? Read 97.301(e) like you don't know anything and then read s25.5 to see what we are talking about. Don't worry about the test, it has nothing to do with the test.

You can lead a pig to water, but hams are something else.

Hey Steve, add to your citations KB3EIA. Let's try (against "normal")
tested 60 db down overall, with multiple 100 db deep holes. Add to that
two tone tinnitus at a loud level. (not measured) I read lips, and due
to the tinnitus, there isn't much point in a hearing aid. When it is
turned up enough to overcome the roar in my ears, it gets very fatiguing
after an hour or so.

You know how much I care about it? Nada, zip. I only mention it in this
group because I like to use it as a counterpoint when people talk about
the poor deaf people and how awful it is to force them to learn Morse code.

Not all must or can do what Steve did. The test standards are not now the same. You, on the other hand, can continue to do what you've been doing toward obtaining an amateur radio license--zip, nada, zilch, nuttin'.

I'm sure you'll get that "Extra right out of the box" as soon as you figure out how to open the box.

You're correct, I won't work that 80 meter CW as well as those with good hearing. So What? Given enough volume in a headset, I'm a darn good contest op on SSB, better than a lot of people who have "perfect" hearing. So we've nulled that one out.

NO, requiring a deaf person to learn CW is NOT like teaching a blind person to drive. Whereas the deaf can still navigate around with whatever aids they can come up with, (sometimes as simple as cranking up the volume on the headset or putting that finger against the speaker cone) the legally blind won't be able to drive without some technology that doesn't exist yet.

So please don't tell those who cannot hear as well as you what they can and cannot do.

A Pandora's box indeed.

There is a whole group of people out ther who have been greatly encouraged by the dropping of the Morse code requirement.

Some of them appear unencumbered by the legal process. How much credibility would a PCTA have with them. It is now up to the NCTA's to get some control.

If they want there to be some control.

I'm not you knuckle head. I'm saying the requirement for the hearing disabled
to pass a morse code test is discriminatory.

But does the government require the blind to take a test to prove they can
read the frequency read out in order to obtain a license?

Ya mean like sheer numbers have "helped" CB radio? Which matters more
in ham radio, quantity or quality?? We're obviously not gonna have
both.

> Of course, that is not likely to be an argument that
> satisfies you,

I'll cheerfully give up thumping for code tests when the writtens get
much stiffer than they are now. As the situation stands now everywhere
I look the service is being dumbed down. How many examples of how
that philosophy has backfired badly in other spheres do you have to
see before you get the drift? Welfare? Public education? Where and how
do we draw the line in ham radio?

> but it was the only thing I could come up with at this
> moment.

Uh-huh. There's a reason for that.

> However, I think even those with code ability would agree that at
> least some have walked away from ham radio because of the code testing
> requirement.

Not "some", uncountable hordes. I've been listening to that excuse for
more decades than I'd like to admit. I never shed a tear for any of
'em. It's a blatent copout and a strong indicator of what ham radio
would have gotten from them.

> Would one of those have pushed the hobby/service forward? We'll
> obviously never know (especially since we're not even clear on what that
> phrase means).

Yeah yeah, and I'll never know how much more money I might have made
if I'd gone to law school instead of engineering school. So what?
We're talking about the path forward from here in ham radio and the
discussions are based on what we DO know has happened both in ham
radio and elsewhere.

There are cases where flashing lights are used for such a thing OR vibrating surfaces..... so being deaf is no excuse either. There ARE provisions. The main thing is, that IF the person is that handicapped, it is up to THEM or their family to provide any testing accessories to suit their needs, to allow the VEs to send the text. The VEs are not required to provide specialized equipment to cater to the handicaps needs.

You folks act as if CW has died and is being buried by everyone in the whole world. I hate to break it to you but there is a LOT of activity on CW. And will continue to be for YEARS.

Just because the testing has been dropped is no reason think CW is not going to be used. I foresee a increase in activity actually. As the phone bands pile up with more and more CBisms the only recourse will be digital and/or CW. There will continue to be CW contesting, DXCC CW only, County hunting...etc..etc.

And I guarantee you a CW signal is a lot less bothered by phone interference than a phone signal is by CW.

Just stay up on the high end of the bands, and leave us alone.

Deal?

Hey, I expected that the code test would someday go away
over 20 years ago- before the volunteer exam system
was started and the writtens moved from being some evidence of learning to
being no more than evidence of passing through a fomality.

> As the situation stands now everywhere
> I look the service is being dumbed down.

There is no other realistic way to regard it. When the code test is gone, ham radio is tossed
onto the steepest part of the slippery slope. Becoming a ham
will be so little beyond getting on CB that what we'll have is all the Freebanders who aren't
the least concerned about regulations dumping into
the ham bands. Many recent postings here on rrap show this clearly enough.

I'm convinced there are some small number of strong technical types out there who have a problem with learning morse code that should have had some means of being licensed without high speed code in years past.
With the 5wpm max code speed, that argument evaporated. But it sure didn't make a dent in the codeless whiners arguement, did it? It's dump code- and dump on code- all the way, no holding back, gimme, gimme, gimme. No end to it. But it's the end of ham radio, as the

calendar works it's way forward, at least the end of any resemblence of ham radio as a useful
entity. If we wanted that sort of crap we could have all gone on up to the region above 27 mhz
to find it.

If it walks like a duck, and quacks like a duck.....

My first thought when the question pools were published was that
the code test is the only thing that will preserve ham radio from
dropping to the lowest possible common denominator. Looks like
the isntant case is pretty much validation of that viewpoint.

Of course Putzie would have to have some real information on ham radio to know how that works, wouldn't he?

And the liklihood that *HE* has done a large bit of bootlegging is more than obvious given his longtime
'interest' in ham radio and the fact that he has never held a license, no?

BUT UNTIL THE AMERICAN LAWS are rewritten, changed, updated (pick your
term), the CW requirement STILL exists in our Radio Laws.
You can NOT sidestep laws that exist. A law may be come effective in one
sense but when it affects so many countries, it takes time in the
administrative governments to trickle down. As I understand it, there are
yet, a few countries who will refuse to abide by the International Treaty's
standards to the letter.
The International Union decided to drop CW as a requirement, that does NOT
mean WE have to. IF the other countries are not so willing to go with it
either, then perhaps the FCC won't be so quick to jump either.

Get off your lazy ass and learn 5 WPM CW. It is not any harder than learning
to drive a car or program a computer. IF it is worth it to you to use 10
meters or any other band, then get your act together and make it a mission
to actually LEARN something. "I" am NOT one of the biased ARRL people, I
don't and won't belong to the ARRL. So my opinion is based purely on KNOWING
that is doesn't take a hell of a lot of work to LEARN - CW @ 5 WPM.
If the handicapped can do it, ANYONE CAN. If you can't, then you're not
handicapped, you're plain brain dead and lazy.

JMS

You must really enjoy playing wannabe lawyer --- and missing the
target. The issue of code and the ADA was hashed out by the FCC
several years ago. Nothing changed.

How stupid can one be -

s25.5 now lets each Administration decide whether a code test is
required. So far the US Administration (FCC) hasn't said that a
code test is not required.

"better move fast" -- hey, dummy, push the FCC and you will see how
slow "big government" will move. I can guarantee that....

We had one applicant for Extra Class in the 70s who was profoundly deaf - he had to communicate with us by Relay Service and translators - and we bent over backwards to get a special exam for him. He not only refused to take a special exam - he insisted on a regular code test like anyone else. He was raising a big stink with the support of that portion of the advocacy groups who insist on mainlining - the Handi-Hams were against him, BTW. After the stink reached Washington, the powers-that-be ordered us to give him a regular code test via his choice of loudspeaker or earphones and make sure that he passed.

He passed easily with no shenanigans.

I myself have no idea why there isn't a whole sequence of events marked out for an orderly transition.

Like who becomes what in the hierarchy of licenses.

Do Novices lose their licenses? Aside from CW, their test is so rudimentary?

Tech pluses?

Lots of stuff that will become apparent as time goes on.

Like it or not, the removal of the Morse test has removed one element of knowledge from the licensing process. Argue with me if about the definition of knowledge, but it is the removal of just that. Knowledge. Sure sounds like entropy in action to me.

A whole lot of people find that removal of knowledge a positive thing for them. This includes that mythical engineer who is so busy he or she cannot take the time to learn Morse or is so fearful of leaning something that they may not use. Unfortunately, it also includes some people who find that rules are for other people.

And yes, I worry about those people. I have great concern for the people who think that a Technician can now pick and choose where to transmit, who think that all ya gotta do to change the rules is have everyone email the head people at the FCC, and whatever these good folk dream up next.

The compliance was met when it was required by international regulation
(and it is still required by FCC regulations). According to your logic
then no license class has any HF privileges since we met the compliance
of an international regulation that no longer exists. So all license
classes that took a code test are now non-compliant, so looks like we
are all off HF until the FCC changes the rules.

The international requirement meant that all entities had to require a code test for HF privileges. Now the international requirement has been dropped, now each entity can decided for itself if it wants to require a code test for HF privileges, and until the FCC changes the rules, it is still required for U.S. hams. What is so hard to understand about that?

Yeah, sure. That's what all the following technical discussion
was about.

You weren't logical in the original, and this response is no
more so. Look at your response... nothing _but_ emotion.

>> All that has happened is that CW has changed its status from a
>> separately tested requirement, to being one of many modes which

CW no longer retains favored status as a *testing requirement*.

>Don't believe that CW has had a long tradition of having favored
>status? Then reread the history of amateur radio. From being the
>mode favored by international treaty, to being the only mode that US
>hams were allowed to use on 40 meters until 1952, amateur radio

You are once again mixing the apples with the oranges.

>Now, all of that has changed.
>

>At the moment, CW operators are "protected" from phone operators, but
>the reverse is not the case.

As noted previously, so are RTTY and other narrow band digital
modes, and it has *nothing* to do with the testing requirement
and everything to do with technical issues.

>With the deemphasis of CW, the old
>situation is clearly inequitable, because the old claim that
>"international agreements demand the band restrictions" is rapidly
>becoming false.

What "old claim" is that? I've never heard of any such claim,
and you are fabricating it just as you fabricated the above claim
that CW is "the mode favored by international treaty".

CW *testing* was required previously, and now is not. That is
all that has changed.

>There is a new reality quickly developing, and heated, emotional
>claims which attempt to preserve tradition for its own sake just
>aren't going to work.

A new reality quickly developing? Where have you been for the past
30 years as this slowly cooked?

>I'll bet my farm that THE BAND PLANS ARE GOING TO BE REEXAMINED over
>the next several years. Ignore the coming debate, and wind up having

Of course the band plans are going to be reexamined. That is a
continuous process that is *always* going on, and has been in
the past just as it will be in the future.

Technology changes. Jeeze, when I first got into ham radio everyone
was worried to death that we'd lose everything. That was the influence
of the WWII shutdown. But look what has been going on for the past
30 years now! Amateur Radio allocations in the HF region have been
expanded. (And now the pressure is on in the microwave regions, that
were once basically undesirable.)

>others decide your band allocations for you. Engage in the debate,
>and you just may stand a chance of making a difference.

Engage in debate! You are engaging in emotionalism. Start using
facts and figures instead of scare stories.

This reminds me of the time Marconi spanned the Atlantic. I remember
he told his assistant "I'm not going to wait until voice modulation
is invented, because I want to give morse code favored status".

Then twenty years later, when hams spanned the Atlantic with shortwaves,
they all said "let's not use that newfangled voice stuff, because
we want to give morse code a favored status". Obviously, Howard
Armstrong who we have to "blame" for all the receivers we use even
today, must have been part of that conspiracy to keep AM in it's place,
since he was part of one of the official transmitting sites for
the attempt.

Of course, there were all those hams in the early days who used
only morse code because they wanted to give it favored status.
It's a myth that they used it because a cw transmitter was simpler
and less expensive.

Let's not forgot OSCAR 1, launched in December of 1961. Those
guys obviously had it send morse code because they wanted to give
the mode favored status.

Phil from now on I will refer to you as Prince Jr.

Listen Prince Jr., I can discuss anything regarding US law and express my opinions. Just because you are ARRL lawyer trying to force morse code down the throats of the disabled and helped destroy Amateur radio by keeping it a elite club doesn't mean I shouldn't voice my opinion. I have never said I was a lawyer or even a wannabe lawyer, good god I bet you are proud of your pals that are going after ten year old children trading muppet songs on the Internet.
The reason disability recognition didn't change was because there was a international agreement that stopped the disabled who could not receive code from being exempt. Now that the international regulation has been changed to delete mandatory morse code proficiency the disabled should be provided a exemption promptly. (That is my opinion, is that OK Prince Jr?)
Is it ok if I express my opinion Prince Jr? Or are you like the morons sending me carbon copies of complaints they are sending to Hollingsworth AKA "Prince" for daring to tell the FCC and the ARRL they are bone heads that have destroyed Amateur radio for selfish reasons.
I mean I'm not the only person that thinks this about the ARRL, FCC and the morse code lunatics that have kept the ranks of ham radio so small it is ripe for the pickings by the commercial entities. The utilities will destroy HF with BPL and the rest of 50 Mhz and up bands that are worth billions of dollars will be sliced up in short order.
All this time I was praying the ARRL and FCC would come around and I was a sucker to be a ARRL member for all those years. Then when it is time to dump the code the crazed bunch of "morse code or death" bunch sneak one in the back door. Now the cocksuckers want to drag out the death of morse code requirements for years.
Who the hell was the ARRL board and staff saving the bands for? It certainly isn't for the average American citizen to become a ham radio operator. If you listen to ten meters it appears the truck drivers are now taking it over, so thank the ARRL and FCC for that.
Thanks for sharing Prince Jr. I hope it was OK for this ham radio operator of twenty years to express his opinion. Should I include a legal disclaimer on all my post from now on? I hope you will not report me to the Oregon Bar Association.

Let me just add this Carl of NCI. If you DONT get your mob of ignorant cbers in line then the real hams will start their own little group. If you think we are going to sit by and watch ham radio be turned into a cess pool like 11m, you are badly mistaken. Expect FCC action. Expect on the air wars.

Did you enjoy your part in destroying ham radio?

When was the last time you heard about amateur radio in your local newspaper
or on your local tv stations? When your local ham clubs have an event, be
it club meetings, Field Day, hamfest or something else that the public might
like to know about, do they bother to get listed in the local events columns,
and try to get mention on TV and radio, and even post to your local
newsgroups?

Or to put it another way, how did you find out about amateur radio?

When I was a kid, I learned about it when there was an article in
a publication intended for children. When I discovered hobby electronic
magazines, amateur radio was still a part of those magazines, though
it was right on the cusp of their disappearing. But when I could try
for a license, I had to dig around to find a local ham club, going to
the ARRL because I didn't know of any local clubs, and had no way of
finding them.

One of the failures of amateur radio is that it doesn't do a particularly
good job of outreach. Notice there is a big difference between trying
to sell something to fill seats, and trying to share something because
it's important to you and you want others to know about it.

Over the 31 years since I've been licensed, my impression is that
amateur radio has increasingly disappeared from public view. Yes,
there is the argument that ham radio has less and less relevance,
but that just means people need to work harder at conveying thei
importance of the hobby to themselves.

Meanwhile, the licensing requirements have become less and less.
About fifty years ago, you might say the halfway point of
amateur radio, your FCC introduced the then-novel novice license, to make
the entry requirements simpler. A simple test, a 5wpm code test, limited
operating priviliges, and only valid for a year. Over the years,
that was modified for less restrictive rules, and more priviliges.
The US Technician license came out at the same time, and originally
was only good for 220MHz and above. That too was modified tremendously
over the years. Then the code was dropped for the technician class.

Here in Canada, we had a no-code license a quarter century ago. But virtually nobody used it. Then in 1990, we got restructuring, and there was an entry level license that did not require a code test.

So over fifty years, half of the time that amateur radio has been around, it has become increasingly simpler for people to join the hobby in North America.

Yet, instead of doing a better job of outreach, the focus is always on making the license requirements simpler. Keep it up, and there will be absolutely no entry requirement.

You think we need numbers to justify the bands, so you want to lessen entry requirements. But that may be a false path. Maybe we justify the ham bands because it is something more than a place to yak it up.

Maybe the kids that use to come to ham radio aren't even hearing about the hobby in the first place. Maybe if they knew, it could be as appealing as it was to me when I was ten. Maybe like me, the code and theory tests are not impediments to joining the hobby, but a sense of accomplishment when they are passed. I was twelve, and went from 0 to 12wpm in four months, and I know I was always disappointed that I took the test (well, I had to go back a second month to pass the code test) in the last week of grade 6, because I was unable to boast to the kids at school.

Maybe the need or lack of a code test isn't an issue to many people, because they haven't heard of amateur radio in the first place.

Methinks you don't have a clue about the history of amateur radio. It didn't start when some regulatory body decided there should be a place for people to talk to their heart's delite. There were radio hobbyists almost as soon as Marconi spanned the Atlantic in 1901, when there were no rules and there wasn't even any use for radio. Those hobbyists played with this new thing, and in part helped to propel the field along. I'm not sure you could separate amateur from professional in those days. It was only once there started to be uses for radio that any rules were put in place. And amateur radio became a service in those early days by virtue of staking out a claim right from the start.

Dilute the entry requirements too much, and what do you have to justify the bands, other than large numbers?

But shift it back to where the test is not just an obstacle to overcome, and you may again make the hobby something that society in general benefits from.

Keith, how can you allege the ARRL is waiting for BPL to take over? The
ARRL just filed a 14, or was it 16? page brief to the FCC against BPL.

How about putting you brain in gear before operating your mouth next time.

Most of the assertions that a code test should be required are
based on the (illogical) premise that if an idiot (the poster)
can pass the test, anyone can and everyone should.

Keith works that one to death.

Here is an idiot who has never been near an emergency. When 911 hit, I lost my internet in Rochester, NY, some 300 miles away due to the 'high technology' also being very highly vulnerable. Several years back, an ice storm hit the North East. There were no telephones, no power, and even emergency towers were downed. One amateur repeater tower/antenna was pressed into service for the police. They were crying for HF mobile amateurs to lend a hand. When there are no telephones nor power for hundreds of miles, neither your CB (and I'm sure this is where the looser is from), nor your cell phone, nor the internet is going to be of any use at all. I'm not going back 30 years, I'm talking recently (and perhaps tomorrow).

Later -
Jim from Rochester, NY

I just recovered from yesterday's hamfest. I still have 11 months
on the CSCE. I picked a few chars out of a repeater's ID today. <:

Case dismissed, with prejudice.

He's just another idiot, and a code test didn't keep him or you out
of ham radio, and is unnecessary (indeed ineffective) as a filter.

My only gripe with the code is the testing. It is stated as a 5 word per minute test. When I challenged the test a few weeks ago I found that it is actually anywhere from 13 to 18 words per minute, not 5 words per minute. The 5 words per minute is a lie....

Why not tell it like it is.... Those giving the test do not want to make it easy for anyone who has a learning disability or not. I have never been able to memorize anything easily when in school, and was accused of being from lazy to stupid. My father told me that I was ignorant because I was partly colorblind. I do not want sympathy, just after studying for almost a year to pass the 5 word per minute test for what it is suppose to be not what someone who is more proficient with the code wants it to be.....

If my General CSCE expires again (this will be #2) I will never take it again and will have lost desire in a hobby that I grew up working in for the last 39 years.......

Not trying to be a smart ass here...but...how do you know it was 13 if you say you can't copy 13???. Could it be he was sending the characters fast and making the spacing long. I.E. Farnsworth method, which is the recomended way to conduct a test?

If you want to quit. Thats your choice. I would suggest you go to a different test place with different folks instead.

The test is given at 5 words per minute. They use a faster character speed
but make the letters further apart. It is actually easier this way because
the brain has more time to react to the character before it has to go on to
the next one.

> Why not tell it like it is.... Those giving the test do not want to make

> be.....
>

If you were memorizing the code, that was the problem. That's not the right
way to learn it. There's quite a bit of material out there on the internet
on the right way to learn code. For starters, work towards a reflex
reaction. i.e. Hear the sound, write the letter. Don't think about the
dots and dashes. Practice every day for 30 mintues per day EVERY day or
almost everyday. There are lots of computer programs out there you can
download from the internet and every person has their favorite. Set it for
an 18wpm character speed but 5wpm word speed. Try the G4FON program. It's
available for free on the internet. I apologize for not posting the website
but I don't happen to have it anymore.

Practicing once or twice a week won't get it. You fall too far backwards
between sessions. Memorizing dots and dashes and then trying to write the
letter slows you down so that you can't keep up.

Read "The Art and Skill of Radiotelegraphy". It's available for free on the
internet. The author did extensive research on how code should be studied.
The biggest problem is that too many people are told to use study methods
that hold a person back rather than move them forward. Another problem is
unrealistic expections. They see the whiz kids get it in a week and think
they should be able to do the same. They're the exception not the rule.

The code is far easier than most things that you have learned in life if you find the correct way to study it and put in the amount of time needed.

Don't give up. Work with modern training methods and you can do it.

I agree with you 100%. The reason in my opinion is that the ARRL kept the morse code requirement for HF access and that kept a lot of my teenage friends out of ham radio way back in 1982 and through the present day.
Today kids now have instant voice communications via the Internet and cell phones and can even send pictures and text messages with their phones. Now that the Internet is here and advanced digital cellphone is in every middle class kids pocket technology has passed by ham radio.
Hams are the now the old technology brushed aside by technology advances. The ARRL just couldn't let code die and now it is too late. IMHO.

Too little to late. Millions of consumers and businesses will benefit from
BPL, we can not as a nation let 100,000 morse code diehards prevent progress.
The ARRL might as well as filed that brief in the FCC garbage bin. Besides the
Commissioners think it is great technology. There isn't anyone standing up for
ham radio and talking about morse code as the leading technology.

Tell ya what, Keith. You do something to back up what your saying you
believe. Write a public letter to the FCC, post it here even so we can all
see it. Let them know that you intend to being operating on _________
frequency (you fill in the blank). Let them know when you will be operating
on the frequency, OK?

Now, I'm serious here. Either put the f*** up or shut the f*** up. Let us
all know when you'll be operating.

What you just described, about memorizing the code, happened to me. I started to try to learn the code at 12 years old. My mom bought me a record...yeah thats right A RECORD..hi. And I thought I was hot stuff...but when I actually tried to receive CW off the air, at a very slow rate. Listened in the Novice bands. I found I didn't know a thing.

A local ham told me I had memorized the record. And that is exactly what happened. He then gave me the ARRL license manual with the proper method and helped when he could.

I eventually RE-LEARNED Morse and got it right. I passed the Novice and in 3 months passed the 13WPM General in front of the FCC.

I am not solid at 40 or so.

So Dee's advice is right on target.

>> over 687,000 US amateurs, plus an unknown number of prospective hams -
>> how many have actually joined your organization?

> And of course there is the big question of.....WHY!

Because the organization exists for the sole stated purpose of ending all code testing for any class of license. It costs nothing but a few mouse clicks to join, but as far as anyone outside the organization knows there are less than 4000 members worldwide (look at the highest member number you see and subtract 1000). That's how many have ever been members, not how many are currently active. A few members resigned after the 2000 restructuring because they decided that 5 wpm was enough, and did not want to see total code test elimination.

>All these people
>yakking here are US citizens with (I think) one exception. What is the
>purpose of joining an organization that has accomplished it's apparent
>sole purpose in this country?

That goal has not yet been accomplished! Element 1 or equivalent credit is
still required for all classes of US ham license with HF privileges. FCC hasn't
changed those rules yet. Heck, FCC hasn't even gotten a proposal to do so yet.

>I mean how many people really care if they

> NCI knows better than the rest of us.

While I don't agree with that, their BoD certainly knows more about dealing
with the FCC than those who advocate breaking the rules.

> Is there an argument that can convince a PCTA to join NCI?

That's not the problem - there doesn't seem to be one that can convince some
vociferous NCTAs to join! Or even to see that their actions damage the very
cause they claim to champion.

>>>Join No Code International! Hams for the 21st Century.

> Lots of stuff that will become apparent as time goes on.
>
Nobody should lose their license. Nobody should lose operating privileges UNLESS they are compensated for by new privileges.

Consider this: There's a whole bunch of stuff that my 1967-70 era tests didn't cover (like PSK-31). But FCC trusts that since I have a clean record I have kept up with the rules and regs. So why should a Novice or Tech be any different?

>> How long will it take to decide, and will "your people" listen to you?

John:

Yes, that's right. And the reason it's "going away" is because of all
the "whining" done by the NCTA over the years.

>>or chooses not to control
>>by virtue of the personal effort or expense involved. The "whining" is

I dunno. I've always said that the code testing requirement would go away,
so I guess the first thing you'd have to do is find someone with a crow in
his freezer, and ask him which whine he plans to have with it when he
decides to thaw it out, roast it, and serve it for dinner.

>>For one thing, it

>I did learn a useful communications skill, Larry. I learned it well enough
>to pass the requirements set forth by the United States Government. Now, if
>you have a problem with your government, you need to let them know.

I have endless problems with my government, Kim, and they've been told all about it. And they've just been told about my "problem" with any future action which they may take to eliminate the Element 1 5-WPM code test from the ARS.

>And,
>you cannot dictate your standards to other people. You do live in the
>United States.

I've never attempted to "dictate" anything to anyone, Kim. Really, if you have any hope of attaining any credibility whatsoever, you really must put a check on the hyperbole.

>My point about CW is what, Larry? Why don't you answer that question.
>Hell, Dick hasn't even answered my question about what it would take for him
>to have a disaster setup for CW, what all would he need. Hell, for that
>matter, you won't even answer my questions, Larry. You guys spew your hate
>and contempt for other people out of the mouths that God gave you. And
>that's all it ends up being with you: hate. You are disgusting.

I don't know where you're getting this "hate" from, Kim, except in your own mind. I don't "hate" anyone or anything, and that includes you. Like all liberals, you immediately and quite naturally associate any form of disagreement with "hate." Therefore, if I disagree with you, and have the audacity to voice my disagreement in an articulate manner, then, according to you, I must "hate" you. By playing the "hate" card, you naturally get to think that you've won the argument, or at least, that round of the argument, because you have made the argument about me and my alleged "hatred" for you, as opposed to the actual subject in question. It's a classic trick of the liberals, and works best when played to an audience of dumbed-down sycophants. Unfortunately for you, Kim, you're dealing with me, instead!

>Answer the damn question, Larry. What do *YOU* think my point about CW is?

The standard NCTA bullet points, Kim. I've never seen you come up with anything original.

I asked why it seemed so fast. I was told by the VE that he gives all
code test at least 13 words per minute if not faster.....

I have sent out a couple of e-mails requesting imformation of how tests
are given ie, speed and if fonsworth method was used. I do not wnat to
know the test iteslf as that would defeat the purpose of the testing
session. I have yet to receive an answer from any VE...

All I ask for is to know what speed I need to be studying as it all
sounds different to me at each speed....

Nope, and its not a skill either. It is a technology problem.

You would not be able to use that as an argument *with the governmental body with which you would have to argue your point.* The government requires all kinds of assinine things from people all the time. I don't think you'd get anywhere with the statement above.

>
> Like I said why doesn't the government require blind people to pass a
driving
> test if they ride the bus?
>

Blind people riding a bus are at the mercy of someone else as driver. A deaf person operating amateur radio is driving themselves. Apples to oranges. If you're going to try to effect change, you need a whole lot more than whines, and using the handicapped to get your way, Keith. It's as simple as that.

>
> You never know when the driver will pass out and
> they will have to take the wheel.
>

Who says they have to? I'm sure most of my blind friends would say that they are pretty much consigned to the fact that if something happens to endager them while under the "care" of another driver, they are ready for the outcome. Would you like for me to ask them?

Keith, why don't you solicit the opinions of some deaf hams? There is a group called HandiHams that you could ask--if they would respond. You could also get on eHam.net, and qrz.com and pose the question in the forums. The question, I suppose, would be: Do you, as a deaf ham, agree that the government should require that you pass a minimum CW requirement for amateur radio privileges at that level?

My guess is most deaf hams are not going to mind a bit. Note that I said *most.* I am sure there are some out there that may object.

Well, now see? I can understand that. BUT, I am not sure that someone
using the handicapped as an excuse is something that we should all
applaud--*if* that is what Keith is doing. Maybe he really *does* know
someone he's taking up for. But, I haven't heard him mention anyone.

Also, *not to argue with you but to debate the subject* ham radio is not a
"mainstream society" activity. Should hobbies be included in the ADA, as it
is all about access? Asking. I don't really have an opinion one way or the
other. I am just offering up a counter to the point you made.

No I am not doing a memorizing of each dit and dah and converting
method. My problem is my brain does not react fast enough to decide what
each character is before the next one is sent. I just get further
behind. I practice at least 20 to 30 minutes usually twice a day if not
more. I use computer programs and ARRL training CDs.

I will check "The Art and Skill of Radiotelegraphy". Thanks for the
encouragement.

No, you scroll up. I said, "I'm not sure I've ever seen that Larry has met a chall....sched yet." That means that when you have been challenged to meet a sched, I have not seen evidence that you have ever met one. I did not challenge you, never have challenged you.

Have you ever met a sched that was offered here?

Now, if you want to turn that around to making it look like I am challenging you, that's fine.

Michael:

Darn it all, how did you know that all of the most important developments
in the history of radiocommunication were nothing more than a conspiracy
to give Morse code favored status? That was supposed to be a secret!

No, again, Larry. Geesh will you learn a useful communication skill,
puhleeze!? I didn't imply a thing about your failure to meet challenges or
skeds. I simply stated that I had never seen anything indicating that you
met one. Now, have you? If so, all you have to do is say you did.

But no....!!! You chose to just get all upset...

Awww...poor baby. You get your PARAMILITARY handset yet,
Sojer in da woods?

Geez, boy, your psychosis is really going strong. You couldn't use a
simple search engine on AOL?

Three minutes, boy, that's all it took to find a seller of PARAMILITARY
handsets. Fair Radio Sales. Long-time surplus business, been doing
business for at least 40 years...since before you were 8 years old.

I've saved you over $307 compared to what you would have paid SGC.

You ungrateful WRETCH...demanding SERVICE...but can't do it
yourself.

Well, did your TN backwoods militia do any illegal PARAMILITARY
radio ops lately, huh? Well, did you, PUNK?

>> >Hams have been using Baudot RTTY for almost 60 years....
>>
>> "Baudot?" Most of those old SURPLUS TTYs had the name
>> "Teletype" on them.
>
> Typical Putz reply.

Poor baby...so brain dead you can't see a little sardonic HUMOR.

No problem. You don't know squat about teleprinters in either radio
or wired communications. Teletype Corporation had a virtual
monopoly on teleprinters for most of the past century.

Colonel Klunk, you have NO authority to demand any such answer.

You are not Mike Coslo...to whom my remarks were aimed.

Why do you attempt to answer for another?

Do you have multiple personalities? Or is your psychosis a mild one
of simple hatred for anyone pointing out that you never did any
glorious government radio pioneering in the 1980s.

>You aren't involved in amateur radio in any way.

Not required.

>You aren't a ham.

The FDA hasn't been around to stamp my beef. Why do you think
you can beef so much without such inspection?

>You aren't a regulator.

NEITHER ARE YOU.

Quit trying to play Raddio Kop. Or did you get one of those nice
shields in the mail so that you can flip open your badge wallet and
pretend to be some kind of officer? Were your friends and neighbors
amazed and delighted at your "promotion?"

>You aren't a budding neophyte.

I was a "neophyte" in radio a half century ago. That quickly passed.

>You're a guy who delights in pointing out
>his past accomplishments in military and commercial radio.

Sorry, but you are LYING again. As I keep saying, the US Army quit
using morse code modes for long-haul primary communications on HF
in 1948. I began operating on HF in early 1953 as part of a team of four

to keep a very large Army radio station operating 24 hours a day, seven days a week.

Both the US Army and US Air Force quit using morse code modes for long-distance primary communications on HF 55 years ago.

"It ain't braggin' if ya done it." I did it.

>repeater yet, Lennie? You sure haven't exactly been burning up the
>airwaves with that Part 15 transmitter you said you were going to put
>on 20 meters.

Steamy, you really DO have a great problem with rational thought. That is not uncommon in those with a psychosis.

I've never intended to "burn up airwaves with Part 15 transmitters."

Why do you spout such LIES?

I've never said anything about "putting any transmitter on 20 meters," or any other amateur band. I HAVE been on hand to help other

radio amateurs match their transceivers to their antennas for maximum power output...but then I know how to do such things both practically and theoretically and have done such in commercial radio service.

You continue to LIE about my "not having any license."

I have had a commercial operator's license since 1956. I have had two non-amateur radio station licenses since then.

The subject is NOT any individual's accomplishments. The subject is the FUTURE of one radio service aftet the morse code test is abolished for a license exam.

You cannot stay in focus on the subject. You continually attack the person instead of the subject. Your psychosis is manifesting itself stronger and stronger every day.

You need competent medical help for you mind. You can't help yourself in that department...you don't have the qualifications.

Why is that?

By all the public evidence in here the pro-coders have NOT BEEN IN
CONTROL OF THEMSELVES for years. Not even close.

Someone should exercise self-control these days and only the
no code test advocates seem the most on-track.

Five days in the penalty box for you...for sticking. :-)

>
> All international treaties have to ratified by Congress, Len. While we are
>a member of the United Nations and the ITU, we are not automatically subject
>to all treaties offered by either of these organizations.

The United States of America is already a signatory to the United Nations.
It is also a signatory to the International Telecommunications Union, a
UN organization. Once signatory to them, we (the country and its
administration) are honor-bound to accept their decisions (that is a part
of the "treaty"). But, that is an HONOR thing and has NO direct force of
any law. Such is commonly called "international law" but there is no
actual enforcement of such "international law" since no such enforcement
body exists.

>Indeed, we are not
>even subject to significant changes to treaties we have already ratified -
>unless a mechanism for changes was included in the ratified treaty, any
>changes to that treaty have to be ratified.

Explain this "ratification" procedure, its process.

The Radio Regulations of the ITU-R are not LAW. They aren't anything
like amendments to our Constitution. They are NOT laws of the United
States until the United States makes laws that subscribe to them.

The Congress of the United States does not directly deal with civil
radio regulation (although it most certainly can, and sometimes does).
The Congress, through the Communications Act of 1934, established
the Federal Communications Commission to make civil radio
regulations...which ARE laws of the USA.

>> Code testing is the "only" treaty the US "recognizes?"
>
> The currently ratified treaty is the only treaty this country recognizes.
>That treaty has a code testing requirement.

Sorry, but you must concede that the USA is signatory to MANY
other treaties...with international organizations as well as individual
nation administrations. That's the fact. There is NO singular treaty
that the USA "recognizes" that has "code testing requirements."

The ITU-R is only one of MANY organizations to which the USA is
signatory.

>> Our states decide whether or not to test for amateur
>> morse code?!?
>
> I'm not referring to the individual states within the United States. A
>"state" in this context is "a country or nation with its own sovereign
>independent government."

Then recognize that the ITU-R refers to ADMINISTRATIONS, not
"states." One does not have to be an attorney admitted to a legal
bar to understand that legal language has terms and phrases which
must be exact.

>> Please explain this new "ratification" process.
>
> Read the Constitution of the United State of America.

I have read it many times since school days. I've even served to
protect it through military service to this country. I understand it and
what most of it says. Nowhere in the Constitution of the United States
is there any mention of radio, morse code, the United Nations, nor the
Federal Communications Commission. [that includes Amendments
which were ratified by the states much later than the original Constitution
acceptance-ratification.

What part of the United States Constitution would you like explained to
you?

All indications are that Kellie was BOOTLEGGING despite claims
(which will surface) that there was a "control operator" there. No
way to ascertain if that control operator was there...except by
his word.

Since you cannot accept anyone's word (if their opinion on a subject
is different than yours), you cannot corroborate anything Kellie said
or did 52 years ago. You are overextending your self-professed task
of being the newsgroup kop in here.

INCORRECT. I've never stated I was "expert" in HF communications.

A half century ago the US Army did NOT use morse code for long-haul HF communications. I am a direct witness to that. So is N2JTV. THAT was my point which you will never ever concede due to your peculiar need to be some sort of radio guru and traffic kop.

After three years at Army station ADA and its 43 HF transmitters, doing both operations and maintenance, I can claim some experience in HF radio long ago.

"It ain't braggin' if ya done it." I did it.

>to keep from waking the rest of the household.

Nobody has to know the exact nature of the "high noise enivornment" to understand that the "noise" is gunfire and ordinance going off.

The reference to the Paramilitary page of the SGC website was quite enough to show that. The word PARAMILITARY is self-explanatory.

You want to put on a military uniform again and be a "Sojer in da woods" to achieve some apparent loss of self prestige. Many do that around the country as a way of working out their frustration at not being able to cope with civilized society.

The search for an H-33 handset took all of about 3 minutes, mostly to navigate the Fair Radio Sales website (large, not optimally arranged). You could have done exactly the same thing, but didn't and asked for help.

You couldn't be expected to understand the reference to an "H-33" because of your age. By the time you were in the military, it had been replaced with the newer H-250...which is now an obsolete model. Obsolete or not, they all work the same and can handle 300 to 500 mW audio into the earpiece. The start of all military handsets that could slip under a helmet edge began in the Korean War and the PRC-9 series had provisions to clip the H-33 to the backpack straps as a sort of speaker (enough to alert the carrier, if not for intelligibility). That clip-on feature is retained today in almost all police officer portable radios, the microphone being used as a speaker when not transmitting.

Well, when you know so little of what once had been your military career, you have to keep putting down others to raise your self-esteem. We all know that too and can see it whenever you get on-line to throw garbage at others.

>would be one method, but does anyone here know?

There are many aids for the hearing disabled as well as sight disabled
out there. Few know about them because there isn't a mass market for
them.

There were at least two "speaking meters" on the market, one of which
was used by a ham heard on a 20m net some years ago. In that case
he put the microphone in front of the meter's transducer to indicate the
carrier frequency (which resulted in an on-air argument amongst the
net as to which one of them was "most accurate" in frequency, sighted
or sightless...heh heh). There are "talking wrist watches" on the market
now, at least three models that I've seen...heard one used by a patient
at a nursing home who also had a bedside radio with some "talking"
features built into its controls.

The "TDD" is quite a common appliance for hearing disabled to use as
a telephone. A perusal of telephone book listings will show the "TDD"
(Telecommunications Device for the Deaf) numbers at stores so
equipped...and some urban services which have operator translators
with a TDD and conventional telephone to "interpret" for deaf folks.
I know a lady who did about two years at that task as a volunteer.

A diligent search will turn up a surprising number of devices and
appliances that are available for sight or hearing disables people.

>
> And your point was...???

Rescue of the hikers was enabled by radio.

Your rage is increased because it was not amateur radio. Tsk, tsk.

That bit of news was well-publicized in Washington and Oregon newspapers at the time, even pictures. There was nothing comparable about rescues involving amateur radio at that time.

You really need to stay on your medications as prescribed. You are not a medical doctor and should not try to diagnose yourself.

>telegraphy" is "in accordance with the international requirements" if they
>operate on those frequencies.

Except that there IS an "international requirement to have "received credit for
proficiency in telegraphy"". The international requirement is that each country
shall decide what the requirement is for those it licenses. Switzerland has
decided that it's 0 wpm. Britain has decided that it's the "Morse assessment"
of the Foundation license. The US has decided it's 5 wpm.
>
>Can we deem that a Tech who has not "received credit for proficiency in
>telegraphy" has nevertheless "received credit for proficiency in

Poor verbiage, that's all.

>If that rule is conditional upon a code test being required by
>international requirements, then there is nothing therein indicating that
>the FCC chooses to require a code test for that particular purpose.

Except that's not what it means.
>
>To cut a long story short, the argument rests upon whether "in accordance
>with international requirements" is a necessary condition in the sentence.
>If it is, then no-code Techs have the Novice HF frequencies*, and if not,
>then they will have to wait. This is really what I am seeking comment on,
>although all other observations are welcome.
>
>*(Although possibly not until after ratification of the new treaty)

FCC used that verbiage to avoid having to keep the Tech Plus class alive. I don't know what their problem with the T+ license is, but they have always treated it as a poor relation.

What I find most surreal about all this is that even with folks like WK3C, K2UNK and K2ASP saying the way it is, folks argue with them and question their motivation and qualification.

No I am well aware of that point. However, the FCCs implementation of requiring a code test is different for Techs than it is for Generals and Extras. Generals and Extras are required to pass Element 1, and Techs are not. Access for Techs to the Novice HF subbands is __not__ conditioned on passing Element 1, but only upon having "received credit for proficiency in telegraphy in accordance with the international requirements" (from rule 97.301(e)).

Given that s25.5 leaves it open for each administration to determine if a code test is required, with no mention of any specific frequencies, the only rule the FCC chooses to make for Tech HF access is 97.301(e), which in turn includes the words "in accordance with international requirements", i.e. in accordance with s25.5.

So, the FCC rule implies that a code test is required if s25.5 requires it, and s25.5 says that a code test is required if the administration (the FCC) requires it! This is a circular process, in fact one that could go around in ever decreasing circles! Each rule appears to be conditional upon the other! Obviously those who drafted the rules did not intend this, but the ITU rule has changed in a way that was not anticipated.

It would seem to me that if two rules each require that a specific condition must be met only if the other rule requires it, then in fact

that condition does not have to be met.

Yeah but..... Remember Iridium?? Not 'zactly a gallopin' bizzness plan but
they got the spectrum and the $$$ backing to toss up something like $22bil
worth of hardware into the sky before reality struck. All very "high tech" and thus highly
desirable to the
regulators who get stars in their eyes and froth at the mouth at the very mention of the
name Carl
Stevenson...And if Bill Gates

and a couple other Guru level geeks climb on board this train's REALLY rollin'......

I sure wouldn't ignore the threat of BPL just because it stinks from almost every viewpoint except that it's
highly desireable as a high tech solution to
a percieved-but-not-necessarily-existant problem. Commisar Powell really
thinks it's THE solution to getting everyone in the world wired.....That alone is trumps tons of logic.

Dick

You can do it. I would advise getting a program that either does random
groups - good, but can be boring, or one that generates or does psuedo
random QSO's from a text file.

None of us could react fast enough at first. You are not alone. When you are copying and miss a letter, just skip it and catch the next one. If you let your mind focus on what you missed, you will then miss several others that come after. DON'T TRY TO GET THE MISSED LETTER AT THAT TIME. Just write an underscore and go on so that you don't miss following letters. This takes a little practice by the way as we all want to be perfect so we sit there and try to figure it out while falling further behind. If you get a lot of blanks at first, that's OK. Just keep working on it.

When you take the test, you are allowed time to go back over your paper and fill in what you think the missing material might be. Here is an example (using an underscore for characters that you miss on the copy).

What you originally copied: NAM_ IS JO_N.
Now if you look back over your copy, fill in what you believe the missing letters should be. In this case, the text sent was most likely: NAME IS JOHN.
Then on the test questions, you will probably be asked the name and there you have it right there on your paper.

When I took my extra code test (20wpm), I had a lot of underscores on my paper but despite that I was able to successfully answer the country question (it was Switzerland) even though I only had about half the letters copied on my sheet.

Kim, do you know what licence Keith has (I don't). I think he does have a point when he says that 97.301(e) was written in the expectation that 25.5 would be suppressed. I does look that way. I don't know how else to explain why it is worded the way it is. Maybe he is only a no-code Tech? I know if I was then I would be a bit worried about going on the Novice subbands even if I was 98% sure that I was right.

Don't email. TELEPHONE them. Ask them what is the character speed and what is the overall word speed. They can have the character speed at 13 (or faster), but the spacing must be adjusted to end up at 5wpm overall. It is not proper test procedure to have the test at an actual 13wpm when it is supposed to be 5wpm.

Talk to the VE team leader that you will eventually be testing under so that you do get the correct character speed for the test that you will be planning to take.

Finally try to find someone who is knowledgeable in correct training methods to "Elmer" you if at all possible.

TRue, but even if it takes that two years I speak of, it doesn't seem
worth joining. Plus it seems their only goal is to eliminnate the code
test, not the transition from one state to the other.

Right. But I think there should be some sort of remedial program for the
novices. After all, I would expect their final priveliges to be
equivalent to a tech plus, which of course doesn't exist anymore, at
least for testing.

In the conext of my point Alun, some of the countries that will apparantly keep the code requirement are not those who we would expect to post to this group, are out of the way, and hard to drum up a lot of interest for change in the typical reader or ham for that matter.

It will be pretty hard to convince a lot of hams here in the USA or say even the UK that they should join an organization that is trying to get ride of the Morse code requirement in say Russia.

Nothing meant about your opinions or right to post here.

But not in that rule, and it's the only rule controlling Tech access to
Novice HF subbands. 97.301(e) refers apparently to 25.5, which now refers
right back again.

For the General and the Extra the requirement remains at 5 wpm until the
FCC changes it, but that is a separate issue.

It is a fallacy of argument to say that someone is an expert, so therefore
they must be right. Their arguments must stand or fall on their own
merits. I do not question anyone's qualifications, as I do not see it as
relevant to whether they are right or wrong.

I've seen a representative sample firsthand at Hamfests and club meetings, Ham radio magazine articles, Ham's gatherings, etc. Your interpretation of those same events differ.

To anyHam:

If you're in MA/Southern NH, why not point out an event (Hamfest, club meeting, random gathering, etc). You wil see anti-social, non technical, operator focused Hams. Name the event time and place, if you are there we could compare notes.

3237. The Morse Code Requirement - Is It Really The Reason People Turn Away?

Newsgroup: rec.radio.amateur.policy
Date: 2003-07-29 03:27:53 UTC
From: ke4jcd@yahoo.com
Message-ID: <460a6f44.0307281927.2ab18bc8@posting.google.com>
Source record: 73072

The Morse Code Requirement
Is It Really The Reason People Turn Away?

Many people feel that the Morse Code requirement is the SOLE reason why many people turn away from Amateur Radio. Well one group dose, No-Code International, an organization dedicated to the abolition of the Morse Code requirement for Amateur Radio licenses.

In this writers opinion, the code is only one of many reasons why people turn away from Amateur Radio. Another, is the people already in the hobby. If you been reviewing my website, you can see how the people, not just the code requirement, can make, or brake a hobby. If the people act no better then CB Agitator, or a show of being better then others, can drive people away.

Let's not forget, many local clubs and members try to drive undesirables away. Who is an undesirable? Well, undesirable are people who have already join the hobby for reason other then local Clubs and their members reasons. It varies from area too area, but it's somewhat the same.

1) If you join the hobby to take advantage of the 2 meter and 70cm bands and don't upgrade to the HF bands. Because, you like to talk to family and friends. You could careless about DXing, filling your walls with QSL cards, and etc.

2) You don't use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for bands above 6 meters FM, but they are fun and entertaining. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together.

3) Not following local codes of conducts, or rules made up by the local clubs and not the FCC. For example, always giving the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory.

All the above can classify you as an undesirable, and get you a life sentence of ridicule, rude comments intended to make fun of your lack of desire to upgrade, or your unwillingness to follow the leader. For example, say you don't wish to upgrade, then your marked as being to lazy to take the code test, or unable due to a lack of IQ.

If this is their idea of encouragement, well it doesn't seem like it to me, it's down right RUDE, and drives people away. Which is the whole idea, but is that really such a good idea?

If we destroy our own, then how do we expect newcomers to view us? If your trying to buildup a hobby, then you need to deal with diversity, not destroy it. Being difference from what is normal or expected is a good thing. It helps make life, or in the care of amateur radio, a much more divers, interesting and fun filled hobby. It's not the same old thing, different day.

This will help bring new blood to the hobby, thus bring fresh, and new ideas with it.

> MODIFIED.

Yes, but modified in a way that the FCC regulation that was directly dependent
on it is affected. It's not the U.S.'s compliance that is in question. The
FCC regulation made it a requirement that certain U.S. licenseholders must meet
an international requirement that now does not exist; therefore, NO ONE can
meet the requirement. That's the problem.

> Thus, there is no issue of "compliance with international requirements".

Traites internationaux qui concerne le CB n'existe pas. C'est vrai qur les regles Americain limitent le range de CB a 150 miles (environ de 240 km), mais je n'ecoutais jamais des regles semblable dans autre pays.

Ici une groupe des radioavertis, pas des cibistes. Cette question pouvait meilleur poser sur rec.radio.cb.

If it's OPTIONAL (on a country-by-country basis, but that doesn't matter; any
basis will do), then it's NOT A REQUIREMENT. One cannot comply with a
requirement that doesn't exist - and that's the problem.

> Until the FCC changes the rules concering Element 1, the
> requirement in the US remains that Element 1 must be passed.

But that's not the requirement. 47 CFR 97.301(e) made DIRECT REFERENCE to the international requirement, not to "element 1 credit." Certainly, there's no need to cite "element 1 credit" for the novice license!

If it had cited "element 1 credit" as the second requirement for technican licenseholders (novice licenseholders already have it by definition in .501), then I would agree that nothing had changed. But that's not how the FCC wrote .301(e) and you know it! ;-)

> The question of -when- and -how- the FCC Rules will be changed is a

> but have never passed the code test.

I don't believe that's the correct question. It's not a matter of no-code technicians now having HF privileges. It's a question of "coded techs" and Novices having their HF privileges STRIPPED on account of one of the two requirements now being untenable.

But until the FCC acts to remove such a reference, that doesn't mean that it's not operative in the meantime.

How does one comply with a requirement that doesn't exist?

But if it's an OPTION for each country, it's NOT an international REQUIREMENT.

Words have definitions. These terms are self-evident.

How does one show compliance with a REQUIREMENT that does not exist?

With most people having computers, learning CW should be so much easier
nowadays. Not like when I was ten, and bought a telegraph set so I
could learn Morse Code, not realizing that sending is not he same thing
as receiving.

One of the things I've wondered about is whether one could get used
to the sounds of the letters subconciously via a program that
sends the morse letter everytime you press a key on your keyboard.
You wouldn't really being paying attention, but it would be a positive
reinforcement of what sounds go with what letters. I'm not sure
it would be a completely painless method, but it would either help
get someone used to the sounds, or reinforce the learning already done.

But I'm not sure anyone has cooked up such a program.

At the very least, with people spending so much time at their
computers, I'd suggest running a CW practice program, sending
random letters, while you do something else at your computer.
Set the volume relatively low, and don't even bother trying to
copy it; just use it to get used to the sounds.

I suspect some of the problem some people have is that they are
trying way too hard. They see the code as an obstacle, and are
fighting it all the way. "Now I'm going to do my hour of code
practice". In the old days, that would mean going to a code
practice course, or buying one of those records (I had one to

start, and I think it did help), or listening to a receiver
where the code might not be optimal or under the best conditions.
You sit there with your pen and paper, and struggle to get it
all right. But moving it into the background makes it less important,
and perhaps by simply getting used to the sounds before struggling
to get it all, it might all come easier.

> accordance with the international requirements", i.e. is "in accordance

> with the international requirements"?

I've taken exactly the opposite approach: IF there is no international requirement (it's now OPTIONAL), then how can one show compliance with a requirement that itself no longer exists? My answer is that one CANNOT be in compliance with a non-existant requirement, and thus HF privileges defined in .301(e) have been STRIPPED effective July 5, 2003 from those who previously held them, not granted to those who didn't have them.

> Granted that s25.5 as revised allows each administration to determine
> whether a code test is required. That being the case, the FCC does so in

> the FCC chooses to require a code test for that particular purpose.

Having a choice (regardless of whom holds the choice) means that it is an OPTION, and options aren't requirements. A requirement means that there is no choice; no option. These are OPPOSITES.

> To cut a long story short, the argument rests upon whether "in accordance
> with international requirements" is a necessary condition in the sentence.
> If it is, then no-code Techs have the Novice HF frequencies*, and if not,
> then they will have to wait. This is really what I am seeking comment on,
> although all other observations are welcome.

What novice HF bands? Novice licenseholders are likewise affected despite the fact that their licenses DO include element 1 credit, because that credit has no bearing on the ability to use those bands. If element 1 were an important fact, then 47 CFR 97.301(e) would have been written that way instead of making reference to the "international requirement" [that no longer exists.]

> *(Although possibly not until after ratification of the new treaty)

Ratification won't make a difference here. Rejection of the treaty might!

Receive credit for what? A requirement that no longer exists?

How does one demonstrate compliance with a non-existent requirement?

I'm not confusing anyone. Read 47 CFR 97.301(e) for yourself and tell me where
it refers to element 1 credit....

Even if techs HAVE PASSED element 1 credit, they no longer possess HF
privileges.

Which means that NO ONE can be compliant with meeting the now non-existent
regulation, and therefore, no technician or novice licensee has any operating
privilege below 30MHz.

For the "brain tumor for breakfast" club:

A choice or option is NOT a requirement.

The WRC-03 attendees may have changed S25.5 - and changed it from a requirement to an option, but that also means that they REMOVED the requirement; i.e. there is NO requirement. It doesn't matter what they put in its place since the FCC regulation dependent on it is dependent on the requirement that no longer exists.

Wrong. What it means is that there is a requirement in the FCC regulation that
NO LICENSEE CAN MEET.

The international change does not mean that no-code technicians can use those HF frequency ranges. It does mean that coded-technicians and novices can NO LONGER use them - because none of them can show compliance with a requirement that no longer exists.

It does not mean that at all. It is another perfect example of FCC regulation-writer shortsightedness, just like happened with the April 2000 changes.

I agree with the above as to what 47 CFR 97.301(e) says.

I disagree that what is left means that any Technician or Novice has any HF privilege at all. The FCC rule still says that these licensees must show compliance with a non-existent regulation. Since they CANNOT COMPLY with a non-existent [international] regulation, they LACK the privilege.

> The reason 97.301(e) was written that way is because the FCC expected the
> s25.5 reference to be deleted, but it was changed. The fact that it was

I disagree. There is a [U.S.] requirement for these licenseholders to meet the international requirement. Show me how they can do this if the international requirement doesn't exist.... It's impossible for them to demonstrate compliance, and therefore, they cannot meet all of the U.S. requirements (one of which is to meet the non-existent international requirement), and thus have no such privilege.

> It doesn't mean a tech can get on 20 meters, it should mean he can operate on

S25.5 no longer REQUIRES anything. So how can one show that one has met the
requirement? That's impossible.

> Don't you see the ARRL is trying to pull a fast one? Read 97.301(e) like you

Not totally correct. The FCC doesn't have information on techs who passed
element 1 after April 15, 2000.

However, what does having passed element 1 for technicians have to do with the
.301(e) privileges? I see no such requirement.

I say that you're both wrong. If there is no international requirement, then
there is no way to demonstrate compliance with it. If you think I'm wrong,
please identify acceptable proof of compliance. (Not needing any proof means
that there is no requirement, and that's a contradiction of the FCC regulation
itself.)

What WRC-03 did is change the requirement into an option. Since it's not a
requirement anymore, there's no measureability of compliance, so how can one be
compliant?

> >Can we deem that a Tech who has not "received credit for proficiency in
> >telegraphy" has nevertheless "received credit for proficiency in
> >accordance with the international requirements", i.e. is "in accordance
> >with the international requirements"?
>
> Nope.

I go further: One may also assume that a Technician or Novice that does have
proficiency has no right to operate there - because said proficiency is
"measured" in terms of a now non-existent requirement.

> >Granted that s25.5 as revised allows each administration to determine

Very poor. If the FCC wanted to do this in a way that didn't depend on an outside body of law, they could have chosen language to indicate dependence on "element 1 credit" and avoid the entire problem.

> >If that rule is conditional upon a code test being required by

I fully agree with that. Now that the international requirement has been killed (and replaced with an option), HF privileges for technicians (and novices) have also died. I interpret this as meaning that ANY type of technician is equal to the "no-code" technician (except those pre-87's who have the credit in hand for a general class license but haven't applied yet), and that novices only have the 222Mhz and 23cm bands for operating.

> What I find most surreal about all this is that even with folks like WK3C,

> but the ITU rule has changed in a way that was not anticipated.

If a government can choose NOT to require something, then it is not an international requirement but an option. The FCC regulation is dependent on an international requirement that no longer exists, so how can anyone show compliance with it?

They can't. What this was was a way for the FCC to get rid of the "technician" HF privileges and make the novice license so useless that the latter will either upgrade or die. They dont' have to worry about the "tech plus" class anymore - there isn't one! 47 CFR 97.21(e) [or whatever it is] that designates renewals of technician plus licensees as technician demonstrates the FCC's real intent on this issue.

> It would seem to me that if two rules each require that a specific
> condition must be met only if the other rule requires it, then in fact
> that condition does not have to be met.

I disagree to as what it says.

I state that what the FCC wrote is that the licensee is to meet a requirement that is now impossible to meet because it no longer exists.

>There's the perfect squelch to end all squelches.

Your squelch circuit is WAY out of calibration.

However, in order to set it properly, you have to read the instruction manual
since that circuit is BEHIND the front panel. I don't think you know how to do that.

I don't know why Coslo is so aggressively antagonistic in here...and on both sides. Maybe he wants tea and sympathy for his tinnitus condition?

I have some of that tinnitus and I don't go around mentioning it every other post. Tinnitus has nothing to do with amateur radio or with professional radio (except for sound men). Tuff. Get ON with life.

US amateur radio is one of the most publicized of electronics-related
hobbies...almost as much as radio-controlled models (there are about
170 thousand members of the Academy of Model Aeronautics and
there are about 170 thousand members of ARRL).

If you ever scan the HAM RADIO Magazine CD ($150 for a 3-disk set
of all 22 years of publication), you can see my articles in there. If the
CDs also include the masthead page you will also find me there for
two years.

> And the liklihood that *HE* has done a large bit of bootlegging is more
>than obvious given his longtime
>'interest' in ham radio and the fact that he has never held a license, no?

I've never done any bootlegging in any radio service, old man. I've held
a commercial license since 1956 and had three years of REAL radio
communications for three years prior to that. You were not able to do
that before age 25. Probably too lazy on your part, ey?

You can't do anything more than throw shit (excuse me, "dung" or
"feces") at others in here...another fine example of the prime of
US amateur radio...and a former VE.

Better me as "Prince Jr." than you as "The Little King" or are you
too young to remember that comic strip ?

Call me anything that you want but don't call me late for dinner or
a juicy pile-up on 20m.

> Listen Prince Jr., I can discuss anything regarding US law and express my
>opinions.

And if you do it often enough even more people will realize that
you are off-base.

>Just because you are ARRL lawyer

Even though I am an ARRL Life Member I do not work for them other
than to volunteer my service - for free - to advise ARRL members in
what the law is and how it applies to them, just like I did at the
County Free Legal Clinic several years ago. I am, in fact, the
engineering manager and regulatory counsel of one of the largest
communications consulting engineering firms in the country,
specializing in public safety clients.

>trying to force morse code down the
>throats of the disabled and helped destroy Amateur radio by keeping it
>a elite club doesn't mean I shouldn't voice my opinion.

A real bozo you are. Did you read my filing with the FCC in the
Restructuring Docket where I came out clearly in favor of dropping
all code testing requirements as soon as possible? And I haven't
changed my mind since then, either.

Wanna talk "disabled", bozo? I am disabled, both of my brothers are
disabled, mu wife is disabled, and my son is disabled. All of us
are respected professionals in highly technical fields, three of us
are hams and none of us has ever asked for one iota of "special
treatment" along the way. e all feel that it is immoral and

downright obscene to use our disabilities as a weapon,

Where do you come off spouting about "the disabled" ??

>I have never said I was a lawyer or even a wannabe lawyer.

Then why are you spouting off as if you were one?

>good god I bet you are proud of your pals that
>are going after ten year old children trading muppet songs on the Internet.

Don't get me started on that. Among other things, my wife lives off
of copyright royalties from stuff she creates and gets published....

>The reason disability recognition didn't change was because there was a
>international agreement that stopped the disabled who could not receive code
>from being exempt.

The reason that disability recognition didn't change was that the
FCC showed that it was making the accommodations required by the ADA.

>Now that the international regulation has been changed to
>delete mandatory morse code proficiency the disabled should be provided a
>exemption promptly. (That is my opinion,

I feel that the FCC should delete all code test requirements for
-everybody- promptly. I've said it before, several times, right here
on your screen, and I'll say it again. Did you not pay attention?

> Is it ok if I express my opinion Prince Jr? Or are you like the
>morons sending me carbon copies of complaints they are sending to
>Hollingsworth AKA "Prince" for daring to tell the FCC and the ARRL
>they are bone heads that have destroyed Amateur radio for selfish
>reasons.

Calm down, take your meds, and sleep it off.

> Thanks for sharing Prince Jr. I hope it was OK for this ham radio
>operator of twenty years

Do you have twenty years of experience or one year's experience
twenty times? You don't have ten minutes' worth of insight,
though.

>to express his opinion. Should I include a legal disclaimer on all my
>post from now on?

What legal disclaimer - you are not a lawyer. Don't flatter
yourself.

>I hope you will not report me to the Oregon Bar Association.

How about the Oregon Mental Health Association ?

Bablefish translates this to:

Not, not, CB is not legal for contacts of DX, even in France. You cannot
employ 11 meters in order to it basic communication. Your friend
violates international treaties implying the band of 11 meters. After
having said that, sometimes it is recreation to break the law (unless
you get caught
And it is likely that they are outside the CB band, in what they call
the "freeband".
Once the solar max is over, bye bye DX. They should swear off
"freebanding" and
get a ham license and operate legally on ham freqs for DX.

Uh, yeah, we've already seen them, annually, thankyew anyway!

You're surely aware of the fact that an existing law/rule/regulation is effective
during any period of time required to change or othewise update it to comply
with prevailing changes which effect its meaning. Any scheme othewise would
invite the very sort of chaos these people are planning.

Does the FCC see it thusly? You can bet on it.

Dick

Robert, that's a fresher new look to the subject. I would agree with it.

Problem is, you will be villified in here, in this newsgroup by the
Kode Klutz Klan regulars. Their whole "amateur radio" experience
seems to be lurking and jumping all over any NCTA, throwing as
much garbage and filth as they can ON the person.

May the force be with you, and may the farce not stay your way.

Best Regards,
LHA

>But I'm not sure anyone has cooked up such a program.

At the Military Intelligence School at Fort Huachuca, their ONLY
morse code cognition machinery is computers running two morse
code generation programs. One of them is available over the
Internet for free.

Fort Huachuca is the only center for any morse code training in the
USA, including civilian government employees. They teach morse
code only for the needs of a few electronic intelligence tasks, solely

concerned with interception, not communications.

>At the very least, with people spending so much time at their
>computers, I'd suggest running a CW practice program, sending
>random letters, while you do something else at your computer.
>Set the volume relatively low, and don't even bother trying to
>copy it; just use it to get used to the sounds.

I would suggest using the personal computer on-line as an education
resource, learning more about radio and electronics.

The future in amateur radio is technology, not the constant emulation
of a 159 year old primitive alphanumeric substitution system.

>I suspect some of the problem some people have is that they are

Hey dipsctick, you claim to be a "Former associate editor of Ham Radio magazine", but as a charter subscriber c. 1968, I never saw your monikor anywhere on or in the publication, up to the date it went belly up many years later..

I dunno about the thundering herd, but I believe you're a total phoney, not just half-vast. Not to mention a simpleton troll.

This sort of thing is true in many hobby clubs, be it ham radio, model
railroading, amateur
astronomy, general aviation, or anything else one needs to learn some
amount of
material about.

I remember in high school in 1971 wanting to get a tech license.
Learned some code, and
my father and I visited an "extra" (who happened to be an FCC field
engineer for
the NYC area). The guy was of the opinion that getting the "tech" would
be the
ruin of my potential ham radio future, and I should get the novice or
learn 13 to
get a general. Anyway, I try the code test, and he does it "Farnsworth"
style
(high speed characters spaced at 5wpm) and having used only the radio shack
code practice records failed badly.... Anything to keep a kid from
getting the
bad ol' tech license.....

Larry:

Now I see amateur radio communications a little different. Obviously in MY life, the emergency or public service oriented communications take precedence, but when I have the time-luxury of "chatting" I personally enjoy taking the time to learn about another person. Learning such things as their likes/dislikes; what they are passionate in life about. Unfortunately my schedule allows me an average of about 5 minutes a day (max.) for that right now, but things will change in the future.

And there is nothing stopping you from enjoying the hobby of photography either! I routinely spend time each week driving around for those perfect shots. There are other ways to earn money in photography as well. Try surviellance photography. Try crime/arson scene photography/documentation. Those are two different ways that I make a little extra income on the side that definitely helps! And they are definitely fun, and you see some amazing stuff!

Well, I can say this at least, as part of "maturing" in Usenet over the past 2-3 years, I am now taking the time to verify, and learn more about an individual than before or that other people in these newsgroups. If I "investigate/learn about" a person and still find out they are an a$$hole, then at least I am knowing that from learning about them as opposed to blindly commenting. The same applies for the non-a$$hole types as well (the nice people) It's a matter of taking the time to learn a person.

I (in my area) have only seen mostly married female hams, which are not
"available" and the few single ones I have seen couldn't get laid in men's
prison with a fistful of pardons and an ample supply of brown paper sacks.
This only applies to the ones I have met, the single ones at least.... all 3
or 4 of them. The overall overwhelming majority of the ham licensed women I
have met are married, and some of them attractive.

Definitely not a "babe" market. I definiteley spend my time looking
elsewhere.

That wasn't directed at your survey for the most part, more of a general statement..... Again, I still stand by my statement as that is at least what was learned a statistics class in high school.

So you've read about ham radio and now you're an expert on it, you got it all mastered. Yep, that's about your speed, all right. Again and as usual, no surprises here.
So how was it you're still so uninformed that you never heard of an unlicensed (or underlicensed) operator working a ham radio station under the supervision of a control operator who has the appropriate license? Hmmmm?
So your reading didn't really teach you all that much about ham radio?
Whatta surprise!

>
>
> If you ever scan the HAM RADIO Magazine CD ($150 for a 3-disk set
> of all 22 years of publication), you can see my articles in there.

Don't bother with the CD nonsense, I was a charter 1968 subscriber, and I still have all the magazines save a few that were loaned out and didn't make it home. It sure is funny that I never noticed your byline, nor even any mention of you or your name in any of them. Of course I could get them out and do a manual search just to see how much of a liar you really are, but naw, you're a phoney from the get-go and that'd be a waste of my time. Whatever (if anything) you may have contributed was too inconsequential to be of note.
Hey, That's the way things work in the publishing world. The heavyweights are well remembered while the featherweights just float away, off into well deserved oblivion.....

> .

So you now say, but you've said numerous things here that have shown
to be inaccurate at best, downright lies at worst. Maybe your NCI buddies
will believe you.

> I've held
> a commercial license since 1956 and had three years of REAL radio
> communications for three years prior to that.

A tisket, a tasket, you lost your yellow basket! So you babysat the fuse panel
at some obscure transmitter site outside Hiroshima or some such. How impressive!
Maybe it was the leftovers from Fat Boy that got to you.

> You were not able to do
> that before age 25. Probably too lazy on your part, ey?

The lazy occured on your shift when you forgot to learn how to count.
I took my discharge from the Army at age 23 after five years service, and had the
First phone the last three years of that time. Maybe your mailorder pschyo'ed
bride will loan you a digital calculator?

>
>
> You can't do anything more than throw shit (excuse me, "dung" or
> "feces") at others in here...another fine example of the prime of
> US amateur radio...and a former VE.
>
>

Lessee, just what was it *you're* good at now, besides slinging dung
at licensed hams?
Babysitting circuitbreakers at a transmitter site
in the backwoods on some Oriental island 50 years ago?

Claiming authorship/editorshit of a ham radio magazine many years ago, altho you
never were licensed, when no one WITH a ham radio license ever heard
of you?

I dunno, Len, I terminated my career nearly ten years ago with an attractive
retirement. Since then I've done whatever I felt like doing, in radio and outside
it. I don't need some 50 year old crutch to prop me up, again within ham radio or
outside it. Clearly your needs hang out there on your sleeve for all to see.
Whatta shame.

And once again-- I **KNOW** I've done more real radio work, work on
heavy hardware -radio transmitting- iron than you ever dreamed of, and
I don't mean just in ham radio, either, though I've done my share of that, too.

Live with it.

OBTW, I was in your backyard again last week. I visited Yaesu USA Center at the Vertex Standard building in Cypress, and we toured around the
region a bit just looking things over.
Can't say I envy you living there.The place leaves a bad taste in one's mouth. Literally. You don't know what clean air is.

No... they only represent their membership. (as that has been dictated to
me time and time again.) There in lies the real root of the problem, it is
a "political" organization, i.e. bureaucracy.

> Those who are not members of the ARRL have chosen to remain unrepresented
> since they have done nothing to form a lobyy to take the place of the
ARRL.

I can self-represent for the time being. It's better that what the has been
done to amateur radio since my involvement since 1988. I write letters on a
regular basis to not only the FCC, as well as the elected officials from my
area that serve in congress and the senate. Not only do issues come up that
they might have an opportunity to vote on, they "have friends" in other
parts of the goverment as well I am sure.

Instead of lazily waiting for the arrl to act on matters, I can just imagine
the response if at least 20-30 wrote letters on a regular basis to there
congress and senator persons. Our districts for each up north here contain
at least 1,000 hams a piece.

That was another question I also had.....WHO are the arrl lobbyists? WHAT
exactly are they doing? WHO exactly are they talking to? WHAT is their
budgets?? I have asked this before but with no response. If it is not for
the magazine subscription (QST is actually a fairly decent magazine even
though content is forever dwindling over the years due stuff being pushed to
the website) then the other argument by some is for some type of
protectionist/mafioso scheme as to why to join the arrl.

I do not consider the arrl the equivalent of christianity, nor will I be
brainwashed to think that arrl can do no wrong or preach/recite some

mantra's.

Since I'm still having problems reading your messages, I'll end with these comments. Those who cheat when it comes to the ADA are causing problems for the truly disabled. The general stereotype is that everyone claiming a disability is faking it. My wife was recently hurt while working for the military and now has a disability (her body is 30 percent disabled). Even though her disability is very real, many people immediately assume she is faking it because the injuries are not outwardly visible (no wheelchair).

As a result, my wife has to constantly deal with an impression she cheating some insurance company out of money using a fake disability. In reality, the military and VA decided she was disabled, and assigned the percentage of disability, based on their own x-rays, surgeries, and follow-up treatment. The VA is now sending her to college for vocational rehabilitation and she gets a small disability check each month ($510).

Trust me when I say she would gladly give all that back in trade for no disability to live with for the rest of her life and no pain at night from each day's activities.

Len, I'm not going to sit here and argue with you as you try to twist what I've said. The Constitution gives Congress the power to ratify international treaties. That ratification process you want explained has be established for over two hundred years and can easily be researched yourself if you really want to know something about it. The United States is not, and has never been, automatically subject to any treaty change by either the UN or ITU. Any change in a treaty requires action by our government before it becomes the law of this land. When it comes to code testing, our government will have to take steps before any change takes place in this country. Until you offer something which disputes any of this, nothing further needs to be said.

In case you haven't noticed, the entire country is being "dumbed" down. So what are you going to do about it - continue to excluded more and more people from Ham Radio as you wait for someone to do something about it?

I don't like what is going on in this country either. But I don't see how we can sit here and insist Ham Radio is only for "smart" people as we exclude more and more in a growing country while our own numbers barely remain stable. Especially when I see darn few 'rocket scientists' in our existing numbers - in any license class.

In my opinion, the existing license exams serve their purpose well. Therefore, I see no reason to demand that future prospective Hams know more than new Hams today, twenty years ago, or fifty years ago.

Of course, you're perfectly free to continue "thumping for code tests" as much as you want. The same with the "stiffer" written tests. However, since code tests serve no purpose other than to exclude today and stiffer written tests would do the same, you certainly won't get any support from me.

>minute. The 5 words per minute is a lie....

The standard test is 5 wpm "Farnsworth spaced" Morse. The characters are sent
fast (~15 wpm) but extra space is inserted between each character so the result
is 25 per minute. Which is 5 wpm.

IOW, "Farnsworth" sounds like this:

dahdah.....................................dahdidahdah.....................
.......dahdit..............

instead of

daaaaahdaaaaah...................daaaaahdiidaaaaahdaaaaaah......daaaaadiit
....

However, if you would prefer the latter, it can be arranged as an accomodation.
>
>Why not tell it like it is....

They do.

>I was partly colorblind. I do not want sympathy, just after studying for
>almost a year to pass the 5 word per minute test for what it is suppose
>to be not what someone who is more proficient with the code wants it to
>be.....

You can ask for accomodations such as non-Farnsworth Morse, different tones,
headphones instead of speaker, etc. But you have to contact the VEC ahead of
time and arrange for it, in most cases.

Look for the G4FON free software and download it. Does a better job for most
people than records or CDs.

Quote from a satisfied user (WA2SI):

"Here is the link to download G4FON's
'Koch Method CW Trainer' as well as KB2TQX's 'KochRX.'

http://www.qsl.net/g4fon/CW%20Trainer.htm

Lemme tell you, this makes learning and practicing CW really fun, almost like a PC game. Download and install both into the same directory and then start off with two characters. KochRX allows you to enter the sent Morse character on your keyboard and at the end of the session (You can vary the time and speed.) it'll compare actual sent vs. what you've typed and grade it."

Also please visit:

http://www.9bit.qc.ca/ve2crd/cours/CW_course.html

Good luck.

Well then, you should know that 5 WPM isn't that difficult to learn... And I
TOO have a 20 WPM Extra. I have NO problem with the FCC keeping the 5 WPM
code element.

I've seen some situations in my life time where code was able to be used
aside from radio. Not a bad idea to keep it in tact at LEAST at 5 WPM.

You have posted this in lots of places, so I will reply only once. The
international requirement is that code testing is optional, hence it can
be met either with or without passing a code test, i.e. veryone meets it
all the time.

> to get it all, it might all come easier.

My bigget problem was missing a letter, and getting hung up on it. By
then 3 or 4 more letters would go by, and then the real frustration
would set in. It ended up that I needed to just relax and let the
mistakes roll by. Then the mistakes went away.

Let's hope people remember that little statement from the study guides about keeping that certificate to prove that they've earned the credit. I'm sure that some will not unfortunately.

> minute. The 5 words per minute is a lie....

You are correct, sir.

The exam administered by the various VEC's is called Farnsworth. If
you look at Part 97, you will see that it specifies Morse. Farnsworth
is mentioned nowhere in Part 97. Furthermore, the specification of
Morse Code is defined nowhere in Part 97, nor in all of Title 47. We
on RRAP have been down this road before.

Basically, if you are a Pro-Code Test Agenda type, you agree to allow
the VEC's to break the law, even encourage it because the examinee may
eventually want to actually use Code at a higher speed.

But if you can read, you see that Morse is specified, not Farnsworth.

If you happen to know enough about all this to ask for the real Morse
Exam at a test session, then the VE must accomodate you. But the
aren't likely to mention it unless you do. If you've been studying
the Morse training tapes, you are likely to fail the Farnsworth exam.

Farnsworth is fairly well agreed to be the better METHOD to learning
faster code. By the time one gets to about 20WPM, there is supposed
to be no difference between Farnsworth and Morse, but with the various
code tutor programs, anything is possible.

Anyway, the VEC's are administering a code exam not specified in Part
97.

Hopefully it will all be over with soon.

Good luck, Brian

>
> Dan/W4NTI

Dan, he probably finished failing the exam again and said to one of
the VE's, "Sheesh, that code seemed awfully fast." Whereas the VE
replied, "Sure, we're sending it at 13-18wpm with long spaces in
between. It all evens out in the end. By the way, we are denying you
access to HF."

That's what happens to people who study Morse Code tapes at 5wpm then
take the Farnsworth exam.

If they don't have a high level understanding of all of this, then
they are just as likely to get a hold of real Morse study material as
opposed to Farnsworth study material.

No. The reason its going away is that the PCTA couldn't present a
sound argument to the FCC for its retention.

Gawd I dunno where they come from . . The modification of S25.5 has
allowed the national GOVERNMENTS to take options, it does NOT empower
the CITIZENS of the various countries to take any options. The U.S.
government has NOT yet stated what options it will take therefore the
rules we have been living under have NOT changed one bit and will NOT
change until THE U.S. FEDERAL COMMUNICATIONS COMMISSION SEZ SO.

Stand up and draw some lines in the sand. Do a Harry Truman, "The buck
stops here."

> continue to excluded more and more
> people from Ham Radio as you wait for someone to do something about it?

Your position then is that it's OK to dumb down ham radio because
everything else is getting dumbed down? That's how the dunbing down
got started.

> I don't like what is going on in this country either. But I don't see how
> we can sit here and insist Ham Radio is only for "smart" people as we
> exclude more and more in a growing country

What do you mean "exclude more and more people from ham radio"?? The
nocode ticket was introduced in 1991. A couple years ago the 13 & 20
wpm code tests were eliminated. Take it much further and ham licenses
will come in boxes of Cheerios. Would that satisfy you?

> while our own numbers barely
> remain stable. Especially when I see darn few 'rocket scientists' in our
> existing numbers - in any license class.

Nonsense. Just look around this NG for high-end techincal talent. Ed
Hare, Jim Miccolis, Cecil Moore, Carl Stevenson, Dick Carroll, Phil
Kane. There are others. There's buckets more RF comms expertise just
in this non-technical NG than I had access to when I got into ham
radio, I only wished. Notice that they all passed code tests and the
Extra writtens. Yes I think there's messages in that.

> In my opinion, the existing license exams serve their purpose well.

I agree, we should retain the 5 wpm test for broad HF access.

> Therefore, I see no reason to demand that future prospective Hams know more
> than new Hams today, twenty years ago, or fifty years ago.

I should live long enough to see the day when the average nocode has
to know more than the average Novice had to know to get on the air 50
yers ago.

> Of course, you're perfectly free to continue "thumping for code tests" as

> mantra's.

I do not consider the ARRL end all and be all either. But a strong, organized group is more successful than random individuals writing to elected and appointed officials. That is a political fact of life. Those who do not care to admit that to themselves will have very limited success in achieving their objectives.

Now as far as who the ARRL represents. Yes it is their members. These members are a cross section of the ham community. The policy is based on what the members want. If you wish the ARRL to change direction, then join it and get a sufficient number of people with your views behind you and get more people to join that have your views so that you have the support to become an official and a policy maker. Those hams who say that they won't join the ARRL because they have a different viewpoint than the current membership of the ARRL are choosing to be less effective in getting their viewpoints across to the ham community and the FCC.

The ARRL isn't some magic entity that exists out there that hams join. It is the result of hams banding together. The views represented by the ARRL will be those of the people who have decided to become active and push those views.

While I do agree that individuals should write their elected officials and so on, that does not negate the need for having an organized body to push for changes.

The most effective way to change the system is to work from within not from without.

>sound argument to the FCC for its retention.
>
>Brian

Brian:

The PCTA didn't present "a" sound argument to the FCC for the retention of code testing -- they presented hundreds of them! The trouble is, the FCC already had it's mind made up. Amateur Radio in general represents an administrative burden to the FCC, and deregulating it down to the bare bones is in their organizational interest. Also, as a government agency, the FCC had to respond to a lot of political and social issues, and one of the trickiest and most time consuming in the ARS was the concept of medical waivers for code testing. So, dumbing-down to a single 5-WPM code test was pretty much a no-brainer for them. Therefore, it wasn't because of a lack of valid arguments on the PCTA side. Nothing we said could have made them retain the status quo in code testing, because they wanted to eliminate that particular administrative burden. As usual, it's all about money.

> this earth. Surely THEY knew that it takes more than just changing the
> treaty?

Of course they do. But there's a number of issues. For example:

Does FCC need to wait until the treaty is ratified or not?

Might FCC just dump Element 1 by MO&O, or is a complete NOI/NPRM cycle
needed?

Will submitting a proposal now cause FCC to act faster or slower? (If
FCC thinks they need to wait till ratification, and they plan to just
dump Element 1 by MO&O, submitting a proposal could upset the apple
cart and cause an NPRM cycle that delays things years!)

What about proposals that are already on the docket?

Might FCC tack code test elimination onto an existing proposal such as
the one "refarming the Novice bands"?

Should the anticodetest folks go for a single issue (dump Element 1)
or something more comprehensive?

Of course all of this may already have been worked out. Or maybe not.

> In case you haven't noticed, the entire country is being "dumbed" down.

I disagree! There are lots of things that are not being "dumbed down".
For example, I don't see TAC making the marathon one inch shorter.

> So
> what are you going to do about it - continue to excluded more and more
> people from Ham Radio as you wait for someone to do something about it?

Who is being excluded? The requirements are what the FCC says they
are. Meet those requirements and the license is granted.

> I don't like what is going on in this country either. But I don't see how
> we can sit here and insist Ham Radio is only for "smart" people as we
> exclude more and more in a growing country while our own numbers barely
> remain stable.

You might want to check those numbers.

> Especially when I see darn few 'rocket scientists' in our
> existing numbers - in any license class.

Note that reducing the license requirements has NOT brought on
significantly more growth nor attracted the "rocket scientists".
Compare the growth of US ham radio from 1980 to 1990 (no medical
waivers, all hams code tested, Techs had same written as General until
'87) with the growth from 1990 to 2000. Sure there were short term
surges but not long term.

Since 2000 the total growth has been maybe 12,000 even though both
written and code testing were reduced.

Or look at what has happened in Japan since 1995...
>
> In my opinion, the existing license exams serve their purpose well.

All depends what that purpose is. Looking at the FCC enforcement logs,
it seems that they don't ensure some hams know enough about how to
behave on the air.

> Therefore, I see no reason to demand that future prospective Hams know more
> than new Hams today, twenty years ago, or fifty years ago.

The problem is that as the technology "advances", the knowledge seems
to drop. Read rec.radio.amateur.antenna for a while and see how long
it takes before somebody starts yet another round on the T2FD....
>
> Of course, you're perfectly free to continue "thumping for code tests" as
> much as you want. The same with the "stiffer" written tests. However, since
> code tests serve no purpose other than to exclude today and stiffer written
> tests would do the same, you certainly won't get any support from me.

The purpose of tests is not to exclude but to guarantee a certain
minimum level of knowledge. What that knowledge should be is purely a
matter of opinion.

If they don't pay any more attention than you, that is likely. And a part of the learning process that you have always missed.

What *looks* like happened, IMO, is that there really wasn't much
planning for a transition after the fall. I could be wrong, but the
leaders seemed rather surprised by the "looting behavior" of some
people. Any time that a vacuum is created, *something* will fill it.

Many people are annoyed at the likes of myself and other "Extra Lites".
I can only imagine that novices, who have taken an extremely rudimentary
test, will likewise be thought of as not worthy of the privelige.

>
>>After all, I would expect their final priveliges to be

But now imagine that. That would be tantamount to saying that "The
Morse Code makes the Ham". A tech plus is not that far from a General,
but certainly in a world that requires no code test, the Novice is
further away from a General than a Technician is. Awkward paragraph, I know.

>>>Consider this: There's a whole bunch of stuff that my 1967-70 era

I'm wating for the day of reconking!

I'm gonna get you all!

I have tried for many years to learn code! Cannot learn it!

Now that the International law has declared it old, it will not be long till the FCC give us no-coders the "green light" - then our takeover will begin.

Hello good-buddy!

>Don't know if anyone has considered this, but if the BPL lines are going to
>radiate intereference, would it not stand to reason that the lines would be
>(not by choice) accepting outside RFI sources???

Correct... and there have been some very pithy statements concerning
this issue submitted to the FCC.

A few I've seen (from the ARRL and others):

- The FCC recently turned down the request for an amateur very-low-
frequency band, on the basis of concerns voiced by the power
companies. The power companies asserted that their existing
power-line-control equipment (which uses VLF signals on the lines)
would not be able to tolerate even the level of EMI induced by an
amateur transmitter running just a few watts of power, on
frequencies where neither the amateur antennas or the power lines
are likely to be acting as efficient radiators/acceptors.

Now, BPL is being proposed... and its proponents are asserting (or
assuming) that BPL can operate effectively even in the presence of
much higher HF interference levels, generated by amateur
transmitters running at legal-maximum power, on frequencies where
the antennas and power lines will be much more efficient.

As the ARRL comment put it, "You can't have it both ways."

- Voltage levels induced by amateur-radio and other licensed
transmitters will likely be high enough to saturate the RF front
end circuitry, and the digitzers, used in BPL modems built to
typical consumer-electronics standards. This could very easily
result in loss of BPL connectivity over a fairly significant area
around each licensed transmitter station, whenever the transmitter
keyed up.

- Getting the BPL signals through, or around, the existing low-pass
filtration created by powerline transformers will require
installing high-pass bypass circuitry. This circuitry will
necessarily couple RF noise on the lines just as efficiently as BPL
signals, and will allow RF noise (e.g. triac switching noise, motor
commutator noise, etc.) to travel on the lines quite a bit further
than it does today.

>later..

Tsk, tsk, tsk. Been out behind the barn sippin some shine, old timer?

You already gabbled out the same thing in a previous message.

I can't help your reading incomprehension, drunk or sober.

Look again. Over 800,000 printed issues contained my bylines.
About the same number carried my Associate Editor title in the
masthead later.

HAM RADIO Magazine ceased publication a bit over a decade ago,
the parent company Communications Technology, Inc., selling to
CQ Communications. The founding editor, Jim Fisk, had died some
years past and publisher Skip Tenney wanted to retire. HAM RADIO
magazine was published monthly for 22 years.

CQ formed a quarterly magazine to handle items of TECHNOLOGICAL
content called, appropriately, Communications Quarterly...from the
available manuscript material now the property of CQ.

Interest in TECHNOLOGY in US amateur radio has been steadily
declining, enough to make profit on such ham magazines very
difficult. Eventually, Communications Quarterly "folded" and was
somewhat picked up as a part of QEX.

> I dunno about the thundering herd, but I believe you're a total phoney,
>not just half-vast. Not to mention a simpleton troll.

And you got drunk and started in garbage-mouthing certain folks.

>really want to know something about it.

Well, long ago I found out that the United States of America was
signatory to the creation of the United Nations, thus making us and
all the other signatories a part of that "treaty."

I haven't bothered to look up the EXACT details of the "treaty" in
which the USA "signed" onto the ITU and away from the CCITT.
That happened several years ago.

The point should be obvious that the USA is ALREADY involved
with an existing treaty to be a part of the UN and also to be a part
of the ITU.

>The United States is not, and has
>never been, automatically subject to any treaty change by either the UN or
>ITU. Any change in a treaty requires action by our government before it
>becomes the law of this land.

Was some kind of Congressional "action" required to send US
administration delegates to the World Radio Conference in June?

Was there some kind of Congressional "action" required by the
FCC International Bureau to do a number of changes and adjustments
in international tariffs with the ITU-T? Or regarding communications
satellite use uplink/downlink frequencies internationally?

WHERE is there evidence of "ratification" actions taken by Congress
or the states of the US on any of the above?

I don't think that all the "ratification" exists except in the minds of a
few amateurs who want to elevate amateur radio OVER & ABOVE
all other radio services in importance.

The US Congress DELEGATED AUTHORITY for civil radio regulation
to the FCC and government communications regulation to the NTIA.

>When it comes to code testing, our government
>will have to take steps before any change takes place in this country. Until
>you offer something which disputes any of this, nothing further needs to be
>said.

So, you are unable to explain the "ratification" process of our government
insofar as morse code testing for radio amateur licensing.

Maybe someone else (admitted to a legal bar, not a neighborhood one)
can explain the "ratification" details?

I've never claimed to be an "expert" on amateur radio or any part
of radio. I've enjoyed a reasonably well-paying career in radio-
electronics engineering, something influenced by doing three
years of large-scale military communications before 1956.

> So how was it you're still so uninformed that you never heard of an
unlicensed
>(or underlicensed) operator working a ham radio station under the supervision
>of a control operator who has the appropriate license? Hmmmm?
>So your reading didn't really teach you all that much about ham radio?
>Whatta surprise!

Kellie was describing what he did 52 years ago at age 14,
BEFORE HE WAS LICENSED.

Kellie previously claimed "26 patents" as a mighty inventor and a
search of patent records showed only ONE.

Kellie previously stated a number of old radio "facts" which were
proven false by others in here. [see "28 V jeeps" as one]

Kellie gets his "Irish" up every now and then and does a great deal
of BS scribbling.

Now YOU PROVE - beyond a shadow of a doubt - that Kellie was
telling the ABSOLUTE TRUTH back then.

>> If you ever scan the HAM RADIO Magazine CD ($150 for a 3-disk set
>> of all 22 years of publication), you can see my articles in there.
>

home.
> It sure is funny that I never noticed your byline, nor even any mention of
you
>or your name in any of them.

I can't help your obvious reading DISABILITY, old man. My bylines are
still there and my mailing address is still the same. You WILL find my
name on HR's masthead, too.

There's a website with a complete listing of HAM RADIO Magazine
articles...taken from HR's annual listings, probably. I don't have the
bookmark but you can find it through a search.

>Of course I could get them out and do a manual
>search just to see how much of a liar you really are, but naw, you're a
phoney
>from the get-go and that'd be a waste of my time.

I wouldn't want your fantasy shattered. Keep believing your own lies.
You will find peace, happiness, and serentity in Nirvana of fantasy.

>Whatever (if anything)
>you may have contributed was too inconsequential to be of note.

How would you know? :-)

You never understood Shannon's Law according to your exchanges
with Cecil Moore in here.

It took you a year to understand how to operate an outboard DSP
audio filter by your own public statements...and then you got rid of
it.

I doubt you have bothered to understand basic principles of radio and
electronics beyond Ohm's Law!

>Hey, That's the way things work in the publishing world.

Again HOW WOULD YOU KNOW?

Have YOU ever sold any work to a publisher?

I've sold work to five publishers of electronics interest, all of it without once meeting the editors face to face. The work sold itself.

It was a FUN thing to do as a sideline, never intended to be of "heavyweight" calibre.

>The heavyweights are
>well remembered while the featherweights just float away, off into well
>deserved oblivion.....

DICK, you've been forgotten before you were known...

>> I've never done any bootlegging in any radio service, old man.
>
> So you now say, but you've said numerous things here that have shown
>to be inaccurate at best, downright lies at worst. Maybe your NCI buddies
>will believe you.

Tsk, tsk, tsk...another RAGE sufferer.

Feel free to spend weeks in the FCC Reading room, looking for all those "bootlegging violations." You won't find any. I've never bootlegged in radio or anything else under the ATF. :-)

I once had two pair of boots. Wore them on my feet, not the legs.

>> I've held
>> a commercial license since 1956 and had three years of REAL radio
>> communications for three years prior to that.
>
> A tisket, a tasket, you lost your yellow basket! So you babysat the fuse panel
>at some obscure transmitter site outside Hiroshima or some such. How impressive!
>Maybe it was the leftovers from Fat Boy that got to you.

Tsk, tsk, tsk. YOUR problem might be radiation effects from your own RF...or too much monotonic beeping.

Army radio station ADA was hardly "obscure." It was in and near Tokyo in central Honshu, rather farther up north from Hiroshima or Nagasaki.

Radiating ~150 KW RF (old site) to ~250 KW RF (new site), all on HF, it was most certainly "noticed" by anyone within several miles. :-)

43 transmitters with RF output ranging from 1 to 40 KW takes up about 200 feet of interior space if arranged in two lines. The antenna field required a 1 x 2 mile former airfield to hold them all.

I realize that isn't near as impressive as a Yaecomwood ham shack in Missouri. :-)

>> You were not able to do
>> that before age 25. Probably too lazy on your part, ey?
>
> The lazy occured on your shift when you forgot to learn how to count.

>I took my discharge from the Army at age 23 after five years service, and had
the
>First phone the last three years of that time. Maybe your mailorder
>pschyo'ed bride will loan you a digital calculator?

You got a "discharge" after 5 years? Interesting. Weren't the terms
of service EIGHT years back then, old timer?

It's not nice to insult my wife...who is NOT "mailorder" and NOT under
any psychosis, nor did she ever get her degrees from any
"correspondence school."

> Lessee, just what was it *you're* good at now, besides slinging dung
>at licensed hams?

I'm not involved in any dung, DICK.

Your federal merit badge is NOT an automatic exemption to allow
yourself being an asshole.

> Babysitting circuitbreakers at a transmitter site
>in the backwoods on some Oriental island 50 years ago?

Tsk, tsk, tsk. If you are so emotionally braindead that you think
operation and maintenance of 43 HF transmitters, 16 VHF-UHF
radio relay sets, and 9 24-channel microwave radio relay sets is
just "babysitting circuitbreakers" then your own ham shack can
be described as a crystal set good for listening to AM BC from as
far away as 20 miles. :-)

> Claiming authorship/editorshit of a ham radio magazine many years ago, altho
you
>never were licensed, when no one WITH a ham radio license ever heard of you?

N2JTV not only "heard of me," he served with me in the same time,
same job, on another team (we had four). Gene and I have since
talked long distance and exchanged mail. He lives in Long Island, NY,
but his radio activity is mostly with radio-controlled model aircraft.

As to "claims," it ain't braggin if ya done it. I did it.

> I dunno, Len, I terminated my career nearly ten years ago with an attractive
>retirement. Since then I've done whatever I felt like doing, in radio and
outside
>it. I don't need some 50 year old crutch to prop me up, again within ham radio
or
>outside it. Clearly your needs hang out there on your sleeve for all to see.
>Whatta shame.

Actually 55-year-old statement of fact. The US Army and US Air Force
GAVE UP on morse code modes for HF primary communications way
back in 1948. I was lucky to be assigned to work in one such station
five years later.

> And once again-- I **KNOW** I've done more real radio work, work on
>heavy hardware -radio transmitting- iron than you ever dreamed of, and
>I don't mean just in ham radio, either, though I've done my share of that,
>too.

OF COURSE YOU DID. You KNOW things that other folks DON'T.

Wow! Heavyweight FANTASY material, old timer.

Yes, we all KNOW that Missouri is a Mecca of "heavy hardware
radio transmitting iron." Yup, you've told us. :-) :-) :-)

>Live with it.

You live with your FANTASY, I'll live with my REALITY.

> OBTW, I was in your backyard again last week. I visited Yaesu USA Center at
the
>Vertex Standard building in Cypress, and we toured around the
>region a bit just looking things over.
> Can't say I envy you living there.The place leaves a bad taste in one's
mouth.
>Literally. You don't know what clean air is.

Cypress is NOT even close to being in "my backyard." :-)

California became the most populated state in the USA many years
ago. Many, many, many folks moved here because THEY liked it.

Tsk, tsk, why isn't Yaesu USA located in Missouri? :-)

> Gunfire? Ordinance? Where in the Blue Blazes are you coming up
>with this, Lennie?

You have a longing to wear a UNIFORM.

Every photograph of yourself on the net is IN UNIFORM of some sort.

Unsmiling face, stern, supposedly some kind of heroic pose...in
Tennessee STATE Guard cammies, in greens/scrubs, in an "official"
flight jump suit.

You seem desperate to GET INTO UNIFORM.

Mention of the "Paramilitary" page on the SGC site is a clue as to
motivation. [I didn't know the SGC was into sales in that area, had to
look for myself]

PARAMILITARY equates with the "militia," the unauthorized
vigilantes who also hunger for the military order of things so that they
can someday overcome the evils of established civil order by force of
arms...and make THEMSELVES chiefs and rulers over everything.

Those who favor the paramilitary aren't exactly into the chaos of
anarchy...they are just wanna-be barbarians who want to rule over

others. The ultimate perverse side of testosterone fantasies.

Amateur radio AS IT WAS comes close to the MILITARY. The use of
"service" as if it were some kind of military or national service...instead
of knowing that regulations use that as a regulartory term. By stating
that ham radio is a SERVICE gives the comfort of BELONGING TO A
FORCE. Fantasies of greatness and glory. Not reality.

You LIKE DESTRUCTION of all who oppose you. That is evident in
all your posts of the last five years. Destruction by any means
possible. Mentions of DEATH to those who oppose you...totally at
odds with being in a life-preserving caregiving profession. Perversity
of emotion when fantasies overrule reality. That is barbarian thinking.

>> The reference to the Paramilitary page of the SGC website was quite
>> enough to show that. The word PARAMILITARY is self-explanatory.
>
> Thier words...not mine.

"Their." Typical syndrome of RAGE. Typographical errors abound in
your postings when you let emotion once again rule over thinking.

>> You want to put on a military uniform again and be a "Sojer in da
>> woods" to achieve some apparent loss of self prestige. Many do
>> that around the country as a way of working out their frustration at
>> not being able to cope with civilized society.
>
> Sorry, Lennie, I have no "loss of prestige". And if YOU are
>evidence of "civilized society", that in and of itself would be reason
>enough to ask for orders to Iraq.

Yes, YOU have LOST PRESTIGE. You've lost your military career.
You are getting older. You've never really learned much of the theory
side of radio or electronics. You've never been IN any kind of
electronics engineering nor have you ever done any real communicating
IN the military.

You RESENT anyone who has done any of the above and vent your
frustrations by a constant bombardment of personal attacks on anyone
who opposes YOUR ideas.

NOBODY will give serious thoughts to "ordering you to Iraq" or anyplace
else. You are TOO OLD for military service. YOU are NOT in the
military nor are you in any form of administrative work valuable to the
nation in Iraq.

Quit playing the FANTASY game of military greatness.

Amateur radio is a HOBBY, a RECREATIONAL pursuit enjoyed by
thousands. It is NOT a military service substitute.

> Thanks for the psychoanalysis, Lennie. Guess you read Mrs
>Lennie's correspondence texts after she was done with 'em, huh?

You CONSTANTLY want to mention my wife, hoping to get some
kind of backhanded slap at both myself and her.

You want to INSULT the entire University of Illinois by calling it a
"correspondence school."

My wife has TWO Masters Degrees awarded by the U of I. How
many degrees do YOU have? How many does YOUR wife have?

Your mind has become unplugged from reality by emotional RAGE
at not being "honored" for your "greatness in radio."

>> Well, when you know so little of what once had been your military
>> career, you have to keep putting down others to raise your self-
>> esteem. We all know that too and can see it whenever you get on-
>> line to throw garbage at others.
>
> The "others" that catch flak in this forum do so as a result of
>thier own silly behaviour. At present, of all the posters herein,
>that means you, Brain and Vippy.

Tsk, tsk, tsk. "Their" and "behavior." Typos from RAGE again.

You are NOT a Brit. Supposedly you went to public school in the USA.
The USA public schools teach correct spelling. Did you FAIL in that?

YOU are localized on three in here. All of them have opposing views
to yours...so naturally you want to ATTACK their PERSON.

YOU must think the three of us are "weak," easy targets. FAR FROM
THE TRUTH.

Your little cannonades are pop-gun farts, not Flueger Abwehr Kanonen.

All you have done for "debate" in here has been a pitiful set of attempts
at personal insult and a sort of ethnic cleansing...to attempt getting rid
of all those who don't go for your established order in mighty amateur
radio force where you still imagine yourself a high-ranking NCO.

You aren't. Ham radio is a hobby, a recreational pursuit, not a military
service.

> Some company you keep.

Fine by me. OPEN DEBATE is one of the cherished rights we Americans
have, guaranteed by our Constitution.

YOU will have NONE of that. YOU want to CONTROL things in YOUR
way, to explicitly follow the amateur orders handed down by ARRL, and
worship your beliefs in greatness and glory. YOU even went so far as
to try to influence the FCC into NOT listening to my comments on
FCC 98-143. That's public record. The FCC rightly figured you to be
some kind of little penny-ante nutcase and IGNORED your demand
that I be silenced.

I don't know Vipul Shah or Brian Burke personally. I would be pleased to know them and talk with them...or any other rational person who has a genuine interest in radio, any part of radio.

I would NOT be interested in knowing some control-freak or fantasy believer or religious nut who portray themselves are "chiefs" or "knowitalls" who demand everyone behave as THEY do. Met others like them before, they were nothings, and dismissed. As I said, I'm only interested in knowing RATIONAL people. You aren't rational.

> And the "garbage" that get's thrown in here was dumped by someone
>other than me...I just pick up the pieces and make a fool of the guy
>who did it.

The only FOOL in here is yourself by your own messages.

NOW TAKE YOUR MEDICATIONS. QUIT WASTING EVERYONE'S
TIME!

>
> In other words: "I lied and now I can't shake off those who
>repeatedly prove that I am a liar".

YOU have an extreme psychological problem with the word "LYING."

That could be due to childhood trauma suffered by being whipped or beaten when YOU were caught lying. Or, it could be that you developed into such a bullshit artist (amateur standing) that you cannot understand truth from fiction.

I CAN pass the written elements of a US amateur extra without any problem. Today, yesterday, a week past last Tuesday, years ago.

The point is that I don't care to achieve "the greatness of an amateur radio license."

YOU can't possibly understand that. All that YOU are interested in is so wrapped up in YOUR own personal psyche that YOU CANNOT debate ANY subject without becoming outraged when opposite

opinions are expressed.

YOUR debate on subjects consists of nothing more than personal attacks on those who don't share YOUR lifestyle beliefs in the honor, glory, and all other fantasies you have about amateur radio.

> No problem, Lennie. We know you're a liar. No need to make
>excuses.

You are still off your medications.

Sad. Someone who is in the caregiving work category who just doesn't care about anyone but himself.

Not being a medical expert...but...it sounds to me like a happening when one is trying to bust through a certain word per minute barrier. Where you must learn to copy BEHIND.

Try this. Listen at a rate of sending that you ARE NOT COMFORTABLE with. In this case TEN or 13 WPM.

ONLY RIGHT DOWN a character that you copy. Forget about ALL the others. Keep doing this. Do not drop down to the 5 wpm at all. Forget that is the goal.

As time goes on you will start getting more and more of the characters. This technique forces the brain to copy BEHIND. This should allow you that split second of time needed.

It works for getting the speed up.

Like I said, it may be what will help you.

Just a thought.

The famous story about Arturo Toscanini, at the time the conductor
of the New York Philharmonic Orchestra:

Most professional orchestras make certain changes and cuts in
traditional (i.e. "warhorse") compositions and thusly use scores
which have lots of hand-written "modifications" for that purpose.

The tale is told of a member of the orchestra who went to The
Maestro and said "Mister Toscanini, my score for Beethoven's Eighth
Symphony is so marked up I can't read it. I have purchased a brand
new score - can you show me EXACTLY what changes and cuts you want
in it?" Toscanini replied: "let me see the old score". He looked at
it and said: "there's nothing wrong with this one except that you
need to add another cut -here- and make a change -there-".

(With thanks to the late Meredeth Willson as told in his book
"And There I Stood With My Piccolo")

There's nothing wrong with the language of the USC or CFR if (1) one
has a good command of American English and (2) one has a good
command of law and (3) one understands what the statute/regulation
was intended for in the first place.

The same thing is true of the writings of any technical profession.
I have always felt that an understanding of FCC regulations is as
important to ham radio as an understanding of the technology being
used by the ham.

Yeah. Monty DePont (and the rest of us who were craftsmen in rule
and affidavit and opinion writing) retired before that time and it's
so difficult to get "good help nowadays"......

>I disagree. There is a [U.S.] requirement for these licenseholders
>to meet the international requirement. Show me how they can do this
>if the international requirement doesn't exist....

Sure it exists. It requires each Administration to determine if a
code test is necessary. It's not an "option" - each Administration
MUST determine if a code test is necessary or not. If the
Administration determines that it is, then any test that is ordered
complies with "international requirements".

>S25.5 no longer REQUIRES anything. So how can one show that one has
>met the requirement? That's impossible.

>Having a choice (regardless of whom holds the choice) means that it
>is an OPTION, and options aren't requirements. A requirement means
>that there is no choice; no option. These are OPPOSITES.

The "international requirement" (inflexible rule) is that the
decision on code proficiency is now up to each Administration. This
isn't an "option" - this is a fixed rule = "requirement".

"Meeting the international requirement" means meeting the rule set
by the FCC. The FCC cannot remove an operating privilege for an
entire class of licensee without a formal rule change unless it is a
temporary or emergency measure. There has not been any formal rule
change, so the situation remains as is.

Whether or not the IRS and the Tax Court works that way, that's how
the FCC works.

Dieter, you've been dealing with the IRS too much to think clearly
on this matter.....

Sarcasm aside, I do believe that I ask a legitimate question.

The operating privileges described in 47 CFR 97.301(e) are based on several requirements, ALL which must be met. One of those is the "international requirement" - which is no longer a requirement but an option (chosen by each government). How can an individual show compliance with a requirement that no longer exists?

I'm certain you've read this and several threads on this point. What is your view on whether .301(e)? Does it still convey privileges, or because no one can meet the requirement, does it convey NOTHING? My view is that since one of its requirements (i.e. to meet the international requirement) cannot be met, it conveys nothing, and thus no novice or technician licenseholder has any [HF] privilege (under this subsection).

The CSCEs are held by the VECs. They do not go to the FCC - and therefore, the
FCC itself doesn't know.

DICK, I pay attention to what the FCC has published in Part 97. It
tends to be the guide book of amateur radio. Your petty little jabs,

half-baked thoughts and incomplete sentences don't rule the ARS. They merely distract and annoy.

You are correct that it's an "if-then" statement.

You are wrong - there is no INTERNATIONAL requirement. There is NOW a national
OPTION in an international agreement, but since parties to the agreement can
OPT-OUT, it is not a requirement.

A requirement is something that must be met - i.e. there is no choice or
discretion. It is NOT OPTIONAL.

>
> No. It simply allows each country to set its own requirements. Right now the
> USA sets the requirement at 5 wpm.

Every country is free to set its own laws anyway. However, that's not what 47
CFR 97.301(e) is based on - it's based on a REQUIREMENT that was revoked and
replaced with something else.

As long as we're speculating about FCC intent, they equally could have chosen
that verbage so as to eliminate the last remnant of the "technician plus"
license class from the rules when the international requirement is revoked.
Note that this section applies to former license classes that aren't being
issued.

>
> Sorry, that doesn't make any sense at all.

Look at sections .301(a), .301(f), and .501. It makes perfect sense.

Stripping HF privileges from coded-technicians (which renew indistinguishable from no-code-technicians per 97.21(a)(3)) and those with element credit in hand leaves them identical to the no-code version, which is a current license class under issue. This means that the FCC doesn't even have to worry which technician licenseholders have code-credit and which don't - it doesn't matter anymore. Stripping HF privileges from Novice licenseholders leaves them with only two bands - as indicated in .301(f); an almost worthless license in comparison to other classes.

Simply put, it looks as if the FCC intent is to do away with these "renewal-only" (and for technician, not really even so) license classes, which they almost did with the April 2000 changes. This was simply the next step.

That should be the goal of all regulatory agencies to use the minimum
amount of "force" necessary.

Also, as a government agency,
> the FCC had to respond to a lot of political and social issues, and one of
> the trickiest and most time consuming in the ARS was the concept of
> medical waivers for code testing.

Naw, as code testing is completely unnecessary, keeping track of code
testing was a monumental waste of time.

So, dumbing-down to a single 5-WPM
> code test was pretty much a no-brainer for them. Therefore, it wasn't because
> of a lack of valid arguments on the PCTA side.

Wrong. The FCC and NCI came to the same conclusion long ago:

Code Testing is completely unnecessary. Only the whining and crying
and the ITU kept it alive as long as it did.

Nothing we said could have
> made them retain the status quo in code testing, because they wanted to
> eliminate that particular administrative burden. As usual, it's all about
> money.
>
> 73 de Larry, K3LT

As usual, it was about common sense. We finally got past the
emotional outbursts and the ITU requirement.

> change until THE U.S. FEDERAL COMMUNICATIONS COMMISSION SEZ SO.

Exactly: Each country has the OPTION. That means that it is NOT AN
INTERNATIONAL REQUIREMENT (but may continue to be a national one). However, 47
CFR 97.301(e) is written in terms of an international requirement that now no
longer exists.

It doesn't matter whether or not the U.S. Government chooses to take or ignore
the option. The operating privilege in .301(e) isn't based on the national
choice - it's based on the existence of an international requirement which no
longer exists.

> > >I go further: One may also assume that a Technician or Novice that does have

If you're so smart, then indicate exactly what proof is acceptable for the "international requirement" cited in 47 CFR 97.301(e). Obviously, you will have to also IDENTIFY that requirement to demonstrate the acceptability of the proof....

> GEEEEESSSSHHHH!!

Wrong with respect to the General, Advanced, and Extra license classes. Their ability to operate on HF is dictated SOLELY by license class, and for these classes, 47 CFR 97.501 indicates the credits (including element 1). These classes have NO REFERENCE to any international requirement as necessary to be met.

You need to re-read the operating frequency privilege rules in 47 CFR 97.301.

That means that there is no international requirement (in your words, "has been dropped").

I agree exactly: "Until the FCC changes the rules, it is still required ...."

How do you show compliance with a non-existent requirement?
Please demonstrate your proof.

1) I am not a troll, nor have I ever posted from easynews.com. I don't even have an account at easynews.com.

2) I have asked a legitimate question. 47 CFR 97.301(e) bases the HF operating privileges for the novice and technician license classes on a requirement that now no longer exists, but the FCC hasn't removed the requirement for those licensees to comply with the external requirement. How are these licensees to show compliance with a[n international] requirement that no longer exists?

If they can't demonstrate compliance, then they don't have the privilege. Is that beyond your comprehension?

This top one is NOT a handle but my name. So what if it's an "ampr.org" address. It's one of the few that actually WORKS because I know what I'm doing.

None of the rest are mine nor under my control. Most I've never even seen before.

Please define "optional requirement."
```

If it's optional, it's not a requirement. If it's required, it's not an option.

47 CFR 97.301(e) is defined in terms of a requirement. That requirement, having been turned into an option, no longer exists - but the appropriate licenseholders, in order to execute the privilege, still must demonstrate compliance with the non-existent requirement. How do they do this? If they can't, then they don't have the privilege. I say that demonstrating compliance with a non-existent requirement is an impossible act.

If each government has a choice, then it's not an "international requirement."
A requirement means that there is no choice. The replacement S25.5 means that
each country has a choice to impose a NATIONAL REQUIREMENT on its
licenseholders (something they could have done anyway). How does that become
an international requirement when some member country to the agreement can opt
out?

> >S25.5 no longer REQUIRES anything. So how can one show that one has

That statement focuses on "requirement," forgetting about "international."

> "Meeting the international requirement" means meeting the rule set
> by the FCC. The FCC cannot remove an operating privilege for an
> entire class of licensee without a formal rule change unless it is a

> temporary or emergency measure. There has not been any formal rule

Yes, there has. Treaties and international agreements supersede national laws.

> Dieter, you've been dealing with the IRS too much to think clearly
> on this matter.....

Perhaps so, but you will find that interpretation of rules and regulations was one of my strongest points when I worked for them. Thinking can be taxing! :-)

> Does the FCC see it thusly? You can bet on it.

1) That does not give them an unlimited amount of time to act on the change.

2) That does not justify applicability of the dependent regulation beyond the time of the change of regulation it depends on. It becomes a regulation that cannot be relied upon as authority (after the date of the underlying change).

3) That implies that the regulation supersedes international agreements and treaties. Actually, treaties and international agreements supersede the laws of the countries party to the agreement or treaty.

3372. Re: The Morse Code Requirement - Is It Really The Reason People Turn Away?

Robert,

A lot of folks have been portraying this 'doom and gloom', yet amateur radio keeps growing. While I don't think Morse is a valid requirement, I don't see the wisdom of lowering technical requirements. I read (was it last year, or the year before?) where a newly minted tech was killed putting up a tower. A 150 watts of rf is modest power, but what kind of voltage exists? Sure, you have a 50 ohm feed point and you can calculate voltage and current .... but that is at the 50 ohm feed point. The far ends of a dipole exhibit around 1000 ohms impedance. That inverted V just might have some very dangerous rf voltage at the ends. Should they be fairly close to the ground .... not good for humans or animals.

Also, there have been lawsuits filed over cell phones causing brain cancer. Some research shows inconclusive results; others show modulated rf does affect cells. Guess what group sponsors the research showing inconclusive results? Remember the tobacco companies? Also, most of the legal limit amps are still vacuum tubes. These are running thousands of volts. Questions concerning bleeder resistors and why they are there and what to do to ensure they did their job before grabbing hold of items within the enclosure are very legitimate questions. Questions as to what modes and where (frequencies) are certainly appropriate. NCI may well be good, but I don't think NTI (No Test International) would be a good idea; of course, if we had no tests, many bands would be rendered as useful as 11 meters - but the good side is that we might have a lot of folks remove their genes from the human gene pool. For information on that, please visit: http://www.darwinawards.com/

Why are you blaming me for this? The original thread was crossposted. Blame the person who started it all.

You should note that where I have noted an inapproprate group, I have killed the cross-posting in my responses. I don't always note that, nor do I really care. I'm not a mind reader of the originator of any thread, myself excluded.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.policy,rec.radio.shortwave

One of the technologies we have ignored in the BPL discussion is the use of coherent detection in the BPL circuitry. It provides very high common mode rejection. For example, high rejection to amateur and commercial HF/VHF transmissions, and high signal to noise integrity on the desired frequencies.

Coherent detection can very easily pull a signal out from under the noise level. For example, I have used systems where the signal can be 20 dB below the noise and still be recovered.

It may just be possible that interference TO the BPL system will not be severe, but interference FROM the BPL system ... well that has been discussed.

>
> The same thing is true of the writings of any technical profession.
> I have always felt that an understanding of FCC regulations is as
> important to ham radio as an understanding of the technology being
> used by the ham.

Isn't it ironic that here we have a thread asking why law isn't
done in "plain English", while we also have other threads going
where several people are twisting the meaning of a regulation
into a pretzel that only a lawyer could appreciate.

With apologies to Toscanini, "there's nothing wrong with this
one except that you need to add another" comment about item 2
"and make a" further comment about item 3.

Item (2) includes finding out what the courts have said the
language means. Dictionary meanings, what the neighbor means,
or what we read on Usenet are all wonderful, but useless if a
court has already decided what it really means.

Item (3) seems to be what everyone is missing in the threads
about whether a now optional requirement exists, because the
question is not whether, with the mind set of a twelve year
old, one can distort the language to get what one wants, but
simply a matter of what the regulation was *intended* to do.

My understanding is that the BPL systems being proposed, use various spread-spectrum techniques - I believe they're based on discrete-multitone / orthogonal frequency division multiplexing modulations, similar to what's used for most ADSL systems these days. There won't be a single carrier frequency... there will be dozens or hundreds in use in any given transmission.

That's how they can get a lot of bandwidth over the wires, provide some resistance to narrow-band interference, and still manage to keep the radiated energy in any given band-slice to within the FCC emissions limits.

>Coherent detection can very easily pull a signal out from under the
>noise level. For example, I have used systems where the signal can be 20
>dB below the noise and still be recovered.

That works nicely with narrowband signals, and at low data rates.

Doesn't seem to me that it will work at all well with wideband multi-carrier systems such as DMT, operating at high data rates.

Also, achieving high common-mode rejection is nice, but since power lines are a long way from being electrically-balanced at HF/VHF frequencies, there's going to be a whole howling lot of differential-mode signal on the lines any time a licensed transmitter keys up in the neighborhood.

Also, getting good common-mode rejection (for coherent detection or otherwise) requires that you have adequate dynamic range and resolution in your front-end electronics... if the interference saturates the receiver chain at any point _before_ the common-mode portion of the signal is eliminated, you're screwed. That's one of the problems one commenter discussed on the FCC page.

>ideas with it.

Robert:

We eliminated code testing for the Technician-class license in 1991, in order to bring "new blood" and "fresh new ideas" to the hobby. We completely "restructured" the licensing system in 2000 for the same reason. After all those changes, where are the "fresh new ideas?" What are we doing now that is radically different from what we were doing 12 years ago, or 3 years ago? Where is all the fantastic new high-speed digital communications technology we were promised? About the only new modes to come into widespread use since then is PSK-31, but that wasn't invented by U.S. No-Code Technicians or 5-WPM General/Extras. Packet radio is pretty much gone from the U.S. amateur radio landscape, and never even saw widespread use at 9600-baud while it was still "popular." The Internet has pretty much cancelled out every prospect of creating a high-speed wireless infrastructure on amateur radio frequencies, save for a few isolated enclaves with a high population of hams who work as professionals in the communications technology field.

For the most part, the "newcomers" to ham radio are just doing what they have always done -- yakking on the local repeaters, whining about the code, and doing just about anything BUT educating themselves in high-tech digital modes and experimenting with them. And they come pre-loaded with all of the traditional excuses for serious involvement, such as no time due to work and family commitments, no money, etc. etc. etc…
I think you need to face the plain truth -- ham radio is dying because the same newcomers who are expected to save it are simply incapable of doing so!

Dan:

Good point. And the PCTA's may not need to lift a finger. After all,
the FCC just went to a great deal of time and expense to restructure
the U.S. amateur radio licensing system, and may not be all that
motivated to go through that process again in such short order. Since
they felt that the 5 WPM test requirement was acceptable to those
who would have burdened them with medical waiver requests had they
kept a higher speed code test, they will not likely see any need to
start the whole NPRM comment/reply ball rolling again very soon.
I could be wrong, of course, but time will tell.

>Wrong. The FCC and NCI came to the same conclusion long ago:
>
>Code Testing is completely unnecessary. Only the whining and crying
>and the ITU kept it alive as long as it did.

I don't recall any "whining and crying" from the ITU. Through their
World Radiocommunication Conferences, they have a democratic process
for changing International Treaty radio regulations, with the member
administrations representing their own unique interests. Until WRC-03,
they had not seen fit to eliminate the S25.5 Morse code testing
requirement. Now, they have. No whining, no crying, just the usual
democratic process, applied fairly. I accept their decision, even though
I don't agree with it.

> Nothing we said could have
>> made them retain the status quo in code testing, because they wanted to

>> 73 de Larry, K3LT

>As usual, it was about common sense. We finally got past the
>emotional outbursts and the ITU requirement.

My recollection is that the "emotional outbursts" have been on the
NCTA side. The PCTA's always posed the logical, "common sense"
arguments. Get it right for once, please!

>a chall....sched yet." That means that when you have been challenged to
>meet a sched, I have not seen evidence that you have ever met one. I did
>not challenge you, never have challenged you.

Kim:

No, all you did was make a speculative comment that I have failed to
meet challenges or schedules with my fellow hams and rrap participants.
Now, you obviously felt a need to make that comment, so please share
with us, what was the reason? After all, you implied something
negative about me, so there MUST be some reason for you to do that.

>*Have you ever met a sched that was offered here?*
>
>Now, if you want to turn that around to making it look like I am challenging
>you, that's fine.

I haven't turned anything around, Kim. All I did was offer you a challenge
to a PSK-31 sked. After all, you apparently had no faith in my ability to
meet the challenge/sked, so I am now offering you the "proof" you seem
to require. If you don't want to take me up on my challenge, then that
means that you think that you can accuse me of never doing so, but then
not permit me to offer evidence to the contrary. I must assume, then, that
you are backing off of your allegation, and are now going to offer your
apology for having made it. Ahem…feel free to proceed.

Source record: 73179

From: yodoc@aol.comnospam (Larry Roll K3LT)

>After all
>those changes, where are the "fresh new ideas?" What are we doing now

Simple, the old-timers are not interested in new ideas. One example would be holding on to Morse code and pressuring new Hams to learn Morse code and excluding those that don't want to learn Morse code. Another example is most old timers want to just make random contacts and are not interested in the technical aspects of the hobby.

I have proposed new ideas, projects, etc. I didn't say I just want others to do those projects for me. I would help with those projects - if there were interest. I have asked to volunteer for those types of activities on several occasions. The old-timers in the club are NOT interested in those types of activities. However, they will put extra effort into teaching code classes to get people to operate Morse code.

Don't blame the newcomers - its the old-timers that want to keep things as they are.

Len, I didn't say anything about the Titanic's sinking, so lets keep
this positive. But being probably the most famous vessel ever, I
thought it would be prudent to include it on the above Morse-users
list. And now there's a pump-key being marketed called the "Titanic."
Something to be proud to own. I'd put it in the bottom of a

salt-water aquarium to give it that correct historical look.

For example, the FCC specifies in Part 97 that a -Morse Code- exam
will be given at five (5) WPM. The VECs gathered and decided to
administer a Farnsworth Exam at 13-15 WPM instead.

> What *looks* like happened, IMO, is that there really wasn't much
> planning for a transition after the fall.

Extra DICK says he foresaw this twenty (20) years ago. Extra Jim and
his bunions have surmised for the last 3+ years that the FCC has no
choice but to dump the code.

So what have you'se guys developed in all this time? Aren't you the
forward thinker on the ARS? You usually have all the answers. Are
you sitting this one out?

I could be wrong, but the
> leaders seemed rather surprised by the "looting behavior" of some
> people. Any time that a vacuum is created, *something* will fill it.

I especially liked Extra Bruce's comments on helping Kim to destroy
the ARS. He appears to be the only know-it-all Extra here who is
pro-active on anything.

Hmmm.

Is Bruce all you'se guys got?

I always figured Dan and Bruce to be 3.950 and 14.313 kind of guys.

"I own Amateur Radio and I'll destroy it before I let you have a sliver of it!"

I expect DICK, Dan, and Bruce to be among the first that Riley tickets.

"Ham Radio" magazine didn't publish 800,000 issues. Perhaps you meant
800,000 *copies*.

Hope you bought lots of souvenir copies for your "I love me" wall.

Reference any of your material beginning, "Fifty years ago I was..."

> You've never worked REAL HF communications, old man. You pretend
> you have playing with your HF radio in an AMATEUR band.

Let's go over a few basics for your benefit, Len.

1. HF amateur radio is REAL HF communications.

2. The newsgroup deals with amateur radio.

3. You aren't remotely involved in amateur radio.

> Now go take a rest and when you wake up, do some number exercises.
> Carefully go through the one that says "26 does NOT equal 1."
> Not in patents, not in anything.

Did you ever figure out the one about 0 amateur radio licenses not
equaling 1 minute on the ham bands?

There already are contests for radio direction finding within amateur
radio. Yes, those competitions are defined as contests.

> Ham radio redefines
> the word contesting to only mean the number of contacts worked.

That isn't correct. *Some* contesting involves making as many contacts
as possible but also includes working multipliers on various
bands/modes.

> >Maybe not in your area. That doesn't mean it's the same everywhere
> >else.

>
> Not at any club in MA. Its not practical for me to move out of my state.

Massachusetts is a little, tiny state bordered by a number of other
states. After you've exhausted your search within your state, start
working on the others. It'll fill your empty hours.

> >Sounds to me like you want someone else to do everything for you
> >instead of getting off your duff and doing it yourself.
>
> No, I would put in the effort in organizing, doing the actual project
> construction and setup, etc. IF any other Ham in the club was interested in

Sounds like you need to go ahead with the organizing, project
construction, setup, etc. and see if anyone is interested. If they are
not, nothing precludes your dropping of your group acitivities fetish
and going solo.

> >You wanna play with SMT, fine
>

>motion to simply make the Morse testing requirement go away.

Sorry Dan you and the ARRL forgot to consider the affect of Americans
with Disabilities law, The only reason that the courts have not
thrown out the code requirement is the international treaty required
it, the treaty overuled US laws. Shortly after the US ratifies the
new treaty which no longer requires the ability to send and receive
code the US courts will throw out the FCC's code requirement. The
courts take a dim view of irrelevant requiremnts, you are going to
have a a hard time convincing the courts that ability to receive code
at 5 wpm is necessary requirement to "talk over the radio".

Morse has much in common with the use of the sliderule. 40 years ago
when I was in school engineers spent several weeks of class studying
the use of the sliderule and logarithms to simplify calculations. Now
the electronic calculator is the tool and the sliderule and log tables
are just relics of a bygone era. Back in the early years Morse was the
only was the only real way for the ham to communicate and the better
your morse abilities the better ham you were now Morse is one of many
methods to communicate. It suffers from being a analog system which
limits its effectiveness, when compared to pure digital systems, as a
weak signal mode. .

Rod Anderson W0RCA
I have better ways to spend my time than studying Morse code but I

still can find the power of a number using a log log slide rule

You forgot to add in (4) a lot of time. As in time to look through the various subsections to find related material. For example, when reading that certification is required, one has to hunt elsewhere to find details about that certification and even elsewhere to find how one can obtain it.

However, the buck doesn't stop here. Ham Radio belongs to the American public. When we set out to exclude that public with unnecessary requirements (excessively stiff written tests or even code), we're simply asking for trouble.

> Your position then is that it's OK to dumb down
> ham radio because everything else is getting
> dumbed down? That's how the dunbing down got
> started.

No, I'm saying it is not okay to exclude people using unnecessary requirements. Nobody here is arguing against reasonable requirements. Instead, we're addressing your argument for stiffer written tests and/or code testing to keep out those you object to. That attitude reeks of discrimination.

> What do you mean "exclude more and more people
> from ham radio"?? The nocode ticket was
> introduced in 1991. A couple years ago the 13 &
> 20 wpm code tests were eliminated. Take it much
> further and ham licenses will come in boxes of
> Cheerios. Would that satisfy you?

Don't change the subject, Brian. You're arguing for something entirely different then the current requirements. Neither you or I have said the current requirements exclude people. What I have said is that the change you're seeking would exclude people - and you yourself even said that is the ultimate goal of those changes.

> (snip) There's buckets more RF comms expertise just

Yes, the people you carefully selected to include in your list have passed the code test. Are you saying that all those without code skills lack technical expertise? If so, I'd say that says more about your own judgment than it says about anything else.

Jim, please read the thread before replying. Brian is arguing for stiffer written tests and/or code to exclude those he doesn't like. My comments addressed the concept of using excess requirements to exclude others.

> Note that reducing the license requirements has
> NOT brought on significantly more growth nor
> attracted the "rocket scientists".

I didn't say it did, Jim. The 'rocket scientists' point was made to address Brian's argument for stiffer requirements to keep "dumb-downed" people out. My comments about growth had to do with what I suspect would happen if Brian were successful in his efforts to exclude others with changes in the requirements.

> (snip) The purpose of tests is not to exclude
> but to guarantee a certain minimum level of
> knowledge. (snip)

Again, I didn't say the purpose was to exclude. Again, my comments had to do with the changes Brian is seeking, not the existing requirements.

That's a bad idea, an hour straight is 'way too long for learning
purposes.

> In the old days, that would mean going to a code
> practice course, or buying one of those records (I had one to
> start, and I think it did help), or listening to a receiver
> where the code might not be optimal or under the best conditions.

When I studied for my earliest tests there were no consumer-level
recording methods let alone computers. My only options for practicing
Morse were having somebody hand-send it or copying it off the air.
Which, as a practical matter, meant copying it with a rcvr or forget
it. I'm still a very strong supporter of learning Morse via the W1AW
code practice sessions. Today they transmit computer-generated code
and back then I believe they used tape-generated code so it has always
been quite precise. I'll concede that I'm only around 150 miles from
the station so they boom here on 80M and QRM wasn't/isn't a problem.
Might be more difficult from the west coasts but I don't know.

I still recommend W1AW over any of the "canned" aids. Two downsides of
course are that W1AW does not send Farnsworth and one needs a
half-decent HF rcvr.

97.301(e): "For a station having a control operator who has been
granted an operator license of Novice Class or Technician Class *AND*
who has recieved credit for proficiency in telegraphy in accordance
with international requirements."

The FCC sets the license requirements and grants the licenses and the
FCC *STILL* requires a a 5wpm code test for HF access specific class
of license completely aside. Yes? Of course. That's U.S federal law
until such times as the FCC changes the regs regarding Element 1.
Which they have not done.

The "AND" in 97.301(e) is *not* translatable into an "OR"which is what
you're obviously trying to twist it into to suit your own agenda.

It's a brick wall. If ya don't meet the current existing FCC
requirements for passing the Element 1 test the rest of 97.301(e) is
automatically rendered completely moot PERIOD.

No rocket science required, just takes a bit common sense.

Strange. I recall the oposite.

The PCTA's always posed the logical, "common sense"
> arguments. Get it right for once, please!

Keeping unnecessary "requirements?" That's just not logical.

Actually, it's doubtful that many people will benefit. The denser neighborhoods
already have DSL and/or cable. Will BPL be faster or cheaper? No!

Yesterday I got a flyer from an outfit offering unlimited DSL, long distance
and local calling for under $90/month. Can BPL beat that?

>You are correct that it's an "if-then" statement.
>
>You are wrong - there is no INTERNATIONAL requirement.

Yes, there is. The international requirement is that each country sets its own
standard. That's why the section wasn't simply eliminated at WRC 2003.

It's within the international requirement for a country to set the Morse code
requirement at 20 wpm, 10 wpm, 5 wpm, or 0 wpm. FCC has set 5 wpm for now. That
is expected to change.

>There is NOW a national
>OPTION in an international agreement, but since parties to the agreement can
>OPT-OUT, it is not a requirement.

Incorrect. Each country MUST set a Morse requirement. 0 wpm/no test is one of
the requirements that meets the treaty requirement.

Look at the UK - do they still require "Morse assessment" for all Foundation
licenses? And isn't the Foundation" the first license of all new UK hams?
>
>A requirement is something that must be met - i.e. there is no choice or
>discretion. It is NOT OPTIONAL.

Exactly! Each country MUST set a Morse code requirement of some kind. The USA
has 5 wpm - for now.

You can argue this all you want but the end result of it is that FCC still
requires Element 1 credit for all HF ham licenses. Don't believe me? Ask 'em.

>

You don't get it, do you? Nobody has ever implied it says OR, and it certainly never mentions Element 1.

What it does say is:

"who has recieved credit for proficiency in telegraphy _in_accordance_with_international_requirements_"

(_emphasis_added_).

The phrase "international requirements" is a clear reference to s25.5, which now makes code testing optional for each administration, such as the FCC. The code requirement for access to Novice/Tech HF frequencies appears nowhere except in rule 301(e), which in turn only refers back to the optional language in s25.5. If the FCC refer to the international regulations for the code requirement, and it says there that it is optional, then where is the determination from the FCC as required under s25.5 that code is required? Nowhere, that's where!

Although my interpretation of the rule is that no-code Techs do have access to Novice/Tech HF frequencies, I hesitate to recommend that they do this without some kind of interpretation from the FCC, which it seems could be almost as time consuming to obtain as a clarifying change in the rule. OTOH, in light of the lack of any FCC records as to which Tech is what, I seriously doubt that they care.

You're right. I think that all should be issued Amateur radio licenses at birth. The testing requirements should be changed to "Utilization Encounters" that no longer have test questions, but rather non-competitive non-graded sessions designed to enhance the self esteem of the Amateur Radio operator. The different grading of the tickets would no longer be based on knowledge, but on how good the licensee feels about themselves.

> discrimination.

Dwight, it all depends on what you mean by unnecessary. CB'ers are on the air on HF. Many run power, illegal or not. And no one has taken a test to do that.

This proves that * you don't need any test at all* to successfully run a station at HF frequencies.

And reasonable requirements can be anything from a difficult test to no test at all. just depends on who is doing the reasoning.

The ARS can be what we make of it. All is arbitrary, and we have to start with an idea of how adroit we want the typical member to be and go

from there. From EE to CB.

You know, perhaps Technician class amateurs DO have HF privileges due to the reference to the old International requirement. However, where in the Schedule are the specific frequency bands allocated.

I would need to reread Pt97, but, my guess is that they either have NO specific allocated frequency bands, or, they would be the same as the Novice class licence.

Well the guide to Amateur Radio newsgroups at URL:

http://faqs.jmas.co.jp/FAQs/radio/personal-intro
Sez

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

Some of you have turned it into "a Morse/CW debate newsgroup" exclusively.

Hiker rescue has legal issues as a ham in california found out when he called in on an Authority frequency with a modified HT.
Rescue was performed, but his HT was confiscated!

You still have not answered the question, where did you come up
with this assertion about ordnance and gunfire?

> Every photograph of yourself on the net is IN UNIFORM of some sort.

Hmmmmmm....I guess you cold consider slacks and a polo shirt a
uniform of sorts. Remove the name tag and it's just another guy in
slacks and a polo shirt.

> Unsmiling face, stern, supposedly some kind of heroic pose...in
> Tennessee STATE Guard cammies, in greens/scrubs, in an "official"
> flight jump suit.

Hmmmmmmmmm....There's not a single picture of me in a Tennessee
State Guard uniform ANYwhere on the net.

Nor is there one of me in scrubs on the net.

And yes, there's one of me in a flight suit. That was more or
less for YOUR benefit, Sir Anderscum, since you insisted I was "a
pudgy punk" in one post. Yet another opportunity to prove you a liar.
Or at least a fool, and that wasn't too hard to do.

> You seem desperate to GET INTO UNIFORM.

Hmmmmmmm....I'm in my late 40's and still working in a profession
that dictates the wear of certain apparel. yeah...I guess you could
call it a "uniform".

Of course I am sure that while you were doing day-to-day
"engineering" (pardon me for a sec while I coke back this
guffaw......) that your employer specified a certain "dress code".
Had you shown up for work in a pair of Bermuda shorts, Hawaiian shirt
and flip/flops, you would have been asked to leave (save for that
occassional "dress-down day")

So see, Lennie..we ALL wear "uniforms" of some sort. Even you.

> Mention of the "Paramilitary" page on the SGC site is a clue as to

> PARAMILITARY equates with the "militia," the unauthorized
> vigilantes who also hunger for the military order of things so that they
> can someday overcome the evils of established civil order by force of
> arms...and make THEMSELVES chiefs and rulers over everything.

Hmmmm...(again)...Yes, there are persons in the United States who call themselves "militia". SOME of those groups are illegal or have dubious intent at best.

Having acknowledged that, I will give you yet another opportunity to provide SOME "proof" that any organization I am now or ever was affiliated with has anything other than the complete approval and saction of law.

The United States Marine Corps was created by a decree of Congress on the 10th of November 1775. I assume you accept the authority of the Congress to so establish that force then and into it's present organization today?

CAP came into formal existence on 01 December 1941. Several subsequent Acts of Congress have updated CAP's status as the United States Air Force Auxiliary. I again assume you have no problem with the authority of the Congress of the United States to create that organization?

The Tennessee State Guard is an entity of the Military Department of the State of Tennessee. I ASSUME that you recognize the Consent and Approval of the Legislature of the State of Tennessee as being duly lawful, said Legislature having been recognized by the same aforementioned Congress of the United States as being duly elected and therefore authorized to do so?

That having been said, I will give you an opportunity to justify the following "wanna-be barbarians" comment, in as much as ALL of those organizations to which I belong or have belonged are legally sanctioned entities and continue to ENJOY the staus as legally sanctioned entities...

> Those who favor the paramilitary aren't exactly into the chaos of
> anarchy...they are just wanna-be barbarians who want to rule over
> others. The ultimate perverse side of testosterone fantasies.

The "perverse testosterone fantas(y)" is yours, Lennie, in thinking that you've been of any importance or impact to the history or development of radio, the use of radio, or the operation of radios.

You haven't.

> Amateur radio AS IT WAS comes close to the MILITARY.

An opinion from someone who's never been in Amateur Radio.
Hillarious in the extreme.

> The use of
> "service" as if it were some kind of military or national service...instead
> of knowing that regulations use that as a regulartory term. By stating
> that ham radio is a SERVICE gives the comfort of BELONGING TO A
> FORCE. Fantasies of greatness and glory. Not reality.

You keep telling yourself this, Lennie. I am sure it gives you
some sort of satisfaction.

> You LIKE DESTRUCTION of all who oppose you.

I'd ask you to "prove" that too, but that will be yet another
request heaped on the "Awaiting An Answer From Lennie" pile.

As for any "destruction" you may suffer, it comes at your own
hands. Every time you lay hands on the keyboard and try to "outwit" me
or anyone who dares to "oppose" YOU, you make a fool out of yourself.
You do this by making more and more outlandish claims that are proven
for the silliness they are without effort.

It's all about you, Lennie.

> That is evident in
> all your posts of the last five years. Destruction by any means
> possible. Mentions of DEATH to those who oppose you...totally at
> odds with being in a life-preserving caregiving profession. Perversity
> of emotion when fantasies overrule reality. That is barbarian thinking.

Lennie, you are the very manifestation of "barbarian". You enter
a forum where you don't belong, insult people whom you claim to
respect but call "elitists", "nazis" and the other usual ahjectives,
and sling your profanity-studded club hoping to hit "something" in the
fray.

There's a "barbarian" here, but it's not me.

> >> The reference to the Paramilitary page of the SGC website was quite
> >> enough to show that. The word PARAMILITARY is self-explanatory.

BBBWWWHAHAHA

BBBBWWWHAHAHA

Yet another opportunity for you to provide some "evidence" of
your assertions.

> Amateur radio is a HOBBY, a RECREATIONAL pursuit enjoyed by
> thousands. It is NOT a military service substitute.

WHERE are you getting this stuff, Your Putziness...?!?!

> > Thanks for the psychoanalysis, Lennie. Guess you read Mrs
> >Lennie's correspondence texts after she was done with 'em, huh?
>
> You CONSTANTLY want to mention my wife, hoping to get some
> kind of backhanded slap at both myself and her.

Nope. No "backhanded slap." Just a casual observation that you
conduct yourself contrary to responsible adult conduct, then often
make mention of your WIFE'S credentials as if YOU accomplished it
yourself.

However this is not unusual behaviour...You DO have a record of
using the deeds and sacrifices of others in order to "promote"
yourself as something you aren't.

> You want to INSULT the entire University of Illinois by calling it a
> "correspondence school."

They do have courses by correspondence, Lennie. They also accept
certain ACT-PEP and DANTE's course which are essentially
tests-for-credit of life-experience in lieu of resident courses.

> My wife has TWO Masters Degrees awarded by the U of I. How
> many degrees do YOU have? How many does YOUR wife have?

One and none. Your point?

> Your mind has become unplugged from reality by emotional RAGE
> at not being "honored" for your "greatness in radio."

Yet another opportunity for you to present your evidence, Lennie.

> >that means you, Brain and Vippy.
>
> Tsk, tsk, tsk. "Their" and "behavior." Typos from RAGE again.

I am sure you think so, Lennie. Laughter, if anything.

Yes Lennie, WE are laughing AT you.

> You are NOT a Brit. Supposedly you went to public school in the USA.
> The USA public schools teach correct spelling. Did you FAIL in that?

Sorry, Lennie...Either spelling (bahaviour/behavior) is in
Webster's. Sorry you don't care for it.

> YOU are localized on three in here. All of them have opposing views
> to yours...so naturally you want to ATTACK their PERSON.

Well. Let's see here.

Yes, you are on the "opposing" side. However you are also
profane, vile, chronically without validation of many of your
assertions, and generally unable to sustain an argument without
reverting to analogies of nazism or assertions of mental health
dysfunctions.

Your "facts" about Amatuer Radio tend to be sterile opinions, not
supported by practical experience or valid reference.

Brain, although licensed and a bit less profane and less prone to
any analogies of the Nazi party still demonstrates a lack of
understanding of many of the threads into which he delves. I can't
help it if he wants to wave his lack of experience in public and then
not take the flogging he deserves over his inaccuracies.

Lastly Vippy. While I cannot ever remember him using a profanity,
he incessantly insults, demeans and otherwise denigrates persons who
participate in Amateur Radio as a direct result of HIS inability to
assimilate into local Amatuer Radio organizations.

Furthermore, he steadfastly ignores the subtle and not so subtle
hints given to him when he goes off on one of his triades, witness his
recent "Outside the Box" thread. Each and every "point" he made has
been dispoven to him over and over, yet he goes on.

> YOU must think the three of us are "weak," easy targets. FAR FROM
> THE TRUTH.

You ARE weak, Lennie. Pathological liars are weak in thier very
nature. Lying is how they compensate for whatever it is they perceive
threatens them or stands as a comparison to them

> Your little cannonades are pop-gun farts, not Flueger Abwehr Kanonen.

Obiously not. You're still ducking.

> All you have done for "debate" in here has been a pitiful set of attempts
> at personal insult and a sort of ethnic cleansing...to attempt getting rid
> of all those who don't go for your established order in mighty amateur
> radio force where you still imagine yourself a high-ranking NCO.

"High ranking NCO(s)" are Sergeants with more than 24 months
time-in-grade. I was not an "NCO" when I retired. I suggest that you
familiarize yourself with the Marine Corps enlisted grades before you
try to insult them.

> You aren't. Ham radio is a hobby, a recreational pursuit, not a military
> service.

I have never said that Amateur Radio IS a military service.

Yes, Amatuer Radio MAY be persued as a hobby and for the most
part is.

For many is is solely a recreation.

However the FACT of the matter is that the Amateur Radio Service
DOES provide a service, both to it's own licensees and to the public
at large. This is a fact documented in the Federal Register.

You are welcome to try and prove otherwise.

> > Some company you keep.
>
> Fine by me. OPEN DEBATE is one of the cherished rights we Americans
> have, guaranteed by our Constitution.

You have not engaged in ANY "debate", Lennie. This is an
assertion you like to try and use to defend your conduct herein.

And so is your frequent citing of the Constitution used to defend
your childish and often profane rantings. Yes, your insults and lies
are "protected" by the Bill of Rights. Still does not make them any
less childish, insulting and inappropriate.

> YOU will have NONE of that. YOU want to CONTROL things in YOUR
> way, to explicitly follow the amateur orders handed down by ARRL, and
> worship your beliefs in greatness and glory. YOU even went so far as
> to try to influence the FCC into NOT listening to my comments on
> FCC 98-143. That's public record. The FCC rightly figured you to be
> some kind of little penny-ante nutcase and IGNORED your demand
> that I be silenced.

YOUR comments were an attempt to do the exact same thing to Mike
Deignan.

> I don't know Vipul Shah or Brian Burke personally. I would be pleased
> to know them and talk with them...or any other rational person who has
> a genuine interest in radio, any part of radio.

I doubt it, Lennie. You've had decades of opportunities to
engage in that kind of mutual participation with radio enthusiasts,
yet you find excuse after excuse to NOT be a part of THE largest
fraternity of radio operators in teh world.

Indeed, your conduct in this forum is an overt effort by you to
further alienate yourself from them.

Your problem...Not ours. Amateur Radio and indeed ALL radio goes
on without Leonard H. Anderson...and I dare say if goes on a bit
brighter and more fun WITHOUT you!

> I would NOT be interested in knowing some control-freak or fantasy
> believer or religious nut who portray themselves are "chiefs" or
> "knowitalls" who demand everyone behave as THEY do. Met others
> like them before, they were nothings, and dismissed. As I said, I'm
> only interested in knowing RATIONAL people.

Then I dare say you'd not like yourself very much. I know "we"
don't.

>You aren't rational.

Because I don't tolerate profane pathological liars, Lennie? Or
because I don't kneel before YOU and YOUR "infinite wisdom"...?!?!

> > And the "garbage" that get's thrown in here was dumped by someone
> >other than me...I just pick up the pieces and make a fool of the guy
> >who did it.
>
> The only FOOL in here is yourself by your own messages.

Hmmmm.....Don't think so, Lennie.

> NOW TAKE YOUR MEDICATIONS. QUIT WASTING EVERYONE'S
> TIME!

There you go with an assertion of mental dysfunction again in
order to promote yourself.

And the only "one" person whose time I am "wasting" is yours, and
as long as you are tied up with these assinine rants and tirades, YOU
aren't wasting OTHER people's time.

Now...Get Mrs. Lennie's books out and try to find out why you
can't get people to like you, Sir Putzalot.

Can you believe that simpleton?? By his 'logic' any of us who have operated and/or worked on a 100,000 watt FM broadcast station need not bother worrying about taking any ham radio exams, we're already "qualiied".

Jim is right- "Don't bother, they're here".

Rod if you had been paying any attention whatever you'd already know that
knowing morse to "talk over the radio" has not been required for a long time.

Now if you want to argue that the courts will insist that knowing morse can't be
required for any class of ham radio license you have another arguement entirely,
and you lose.

> it.

Exactly, and with my old ARC 5 receiver you NEVER heard only one signal, the thing was wide open and you
had to pick out which signal you wanted to copy and learn to ignor ethe rest. Sure was good training, I
developed a very
good 'internal filter' at the outset and still retain that skill.

The upside was that the Novice bands were absolutely packed with slowspeed code and finding lots of
practice was no problem. You also learned to copy the many and varied 'fists', it was all hand sent, no
one had a keyer, though some used bugs. That provided another experience which developed lifetime
skills that no one today gets. I still enjoy copying hand sent or bug sent code, unless it's *really*
butchered.

> I'm still a very strong supporter of learning Morse via the W1AW
> code practice sessions.

It's probaby the best training resource around if one owns a receiver, especially after one has learned
basic Morse.

I've heard them one one band or another everywhere in the USA
that I've listened for them including out on the west coast.

We (or I) have answers, but they won't be acknowleged. We lost the war,
and now it is up to those who won it.

A PCTA has to sit this one out because his/her input is no longer
relevent. The paradigm has changed. NCTA's will rule the roost.

RE: > > I could suggest alt.survival if you want rescue stories.

Lord I wish there was an alt.cw.debate.ad nauseous newsgroup

Three years of the same old pro-code, no-code rationalizations, insults, obscenities, and sheer nonsense.
Thousands of them off topic, loaded with shameful personal attacks and self-serving brag tape lies.

Go to google
select groups and advanced search for rec.radio.amateur.policy
search for code
Get 55,000 results
As the man sed "Give it a rest"

Why not get back to the intended purpose of this newsgroup as previously posted?
Stop the personal attacks and obscenities and give Amateur Radio a good name.

Somewhere out there is a alien space ship reading all this and observing "Strange Society. Make course for home Scotty -- no sign of intelligence here"

> public.

Wrong. The whole planet owns the RF spectrum and the FCC is charged with doling out spectrum space to U.S. users of the that space in the public interest as it sees fit. Getting user access to the spectrum is not some wifty inherent "right of the people", it's a privilege. And to gain that privilege come certain requirements and responsibilites.

If the "American public" is not up for meeting the requirements and responsibilties which come with a ham license they can still go to 27 Mhz, FRS and MURS. Which is why those services were created.

> When we set out to exclude that public with unnecessary requirements
> (excessively stiff written tests or even code), we're simply asking for
> trouble.

And when it's all said and done we're back to the Cheerios syndrome. When was the last time you know of when a wannabe ham said "geez, don't dumb down the tests any more, they'll TOO easy for me . . "

> > Your position then is that it's OK to dumb down

Right. I support keeping the bar at it's current level. I oppose lowering the bar to a lower level as you suggest. That's the way it is.

> That attitude reeks of
> discrimination.

You can put that in bank right now. There is nothing evil about
evenly-applied discrimination. It's everywhere around us, in zoning
plans, in the bases for your compensation and perks on the job, in the
privileges accorded holders of the various classes of ham licensees,
endless list. Don't look now Dwight but discrimination is the
underlying engine which drives capitalist
democracies.

> than it says about anything else.

No Dwight, not at all. After I composed the list and went back and
scanned it I then realized that the high-end techos are also coded
Extras.

Here's your opportunity to parade out your list of high-end techo
nocodes with skills like those I've picked as examples have.

And by the way I do know a couple highly-respected
long-time(decades)Techs who do possess those skills. But dontcha just
know they passed code tests too?

The wording we are arguing about, and the associated frequency table that it applies to, are both in 97.301(e). It's just a hassle to reproduce a table in ASCII text, but it's the table of Novice HF frequencies. This was mentioned earlier, but there is more than one thread on this.

There's no dispute that nobody can get a no-code General or Extra until after the FCC change the rules, but those rules don't refer to the international rules, and this one does.

That's simply not true, Leonard.

You are usually out of control
"in here".

Are you proud of the example
you set?

Do you think others have any
respect for you?

I used to have respect for you.

I don't, anymore.
>
> Someone should exercise self-control these days

Why?

You don't.

You are taking what is an aside, and basing your whole argument on it. Won't work.

This argument doesn't work on enough levels that it is surprising that anyone would use it.

1. My first remark about the very secondary nature of the "in accordance with....."

2. The reworded Article 25.5 now says, "Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals."

Do you agree that this is the reworded article 25.5?

The administration has determined that the persons seeking a license must pass a 5 wpm Morse code test. Until it changes it's requirements, it will continue.

3. There is nothing in the rules that we are out of compliance with.

4. Morse code testing is not abolished. Individual administrations now make that call- to test, or not to test.

Using the argument that Morse code testing has been abolished is quite simply *wrong*. It will be wrong until the FCC rules otherwise.

At 5 wpm with Farnsworth spacing, you have around 1.5-2 seconds
between characters. That should be plenty. Are you using Farnsworth
spacing?

Try this experiment: Have someone read a random sequence of standard
phonetics ("Hotel, Sierra, Alfa, Yankee..." at a rate of about one
word every two seconds while you write down the first letter of each
word. If you can do that, it's a good bet you can learn to copy 5 wpm
code.

Are you block printing or writing cursive? I found block printing
avoided a lot of problems because each letter stands alone.

> > > I just get further

> > > more. I use computer programs and ARRL training CDs.
> > >
> > > I will check "The Art and Skill of Radiotelegraphy". Thanks for the
> > > encouragement.

Try this:

Set the computer to send just two unrelated characters - say, R and Z.
Practice copying those two until you get 95% or better copy. Then add
just one more letter and practice until you can get 95% or better with
those three. The trick is to not add any new ones until you know the
old ones almost perfectly.

letters are giving you trouble.

Me too. And no time was allowed for going back - when the code
stopped, they took the paper away. Plus, if the examiner could not
read your writing, you flunked. Also you had to send 20 per to the
examiner's satisfaction.

But all that has been gone for over 20 years now. Ancient history. Yet
many hams licensed since those days could easily meet that standard.

Note that today's test can be passed by answering the questions OR
finding one minute (25 characters) of solid copy.

I did.

> Brian is arguing for stiffer
> written tests and/or code to exclude those he doesn't like.

That's not how I read it. It's about what every ham should know and be
tested on.

> My comments
> addressed the concept of using excess requirements to exclude others.
>
But who decides what requirements are excess? It all comes down to
opinion.

For example, I think every ham should at least know Ohm's Law for DC
circuits. Basic stuff like E = IR, resistors in series and parallel,
how many amps a 50 watt rig draws from a 12 volt source if its overall
efficiency is 50%, etc. Others would say that stuff is "too
technical", particularly for "entry level" licenses. And there are
plenty of hams who don't know that stuff. Is requiring Ohm's Law
knowledge exclusionary? Is it an excess requirement?

> > Note that reducing the license requirements has
> > NOT brought on significantly more growth nor

> happen if Brian were successful in his efforts to exclude others with
> changes in the requirements.

Nobody know what would really happen because for the past 25+ years
the direction has been towards easing the test requirements. Dick Bash
started it.
None of the changes along the way was very big but the end result has
been dramatic. Particularly for the top license classes.

>
> > (snip) The purpose of tests is not to exclude
> > but to guarantee a certain minimum level of
> > knowledge. (snip)

> Again, I didn't say the purpose was to exclude. Again, my comments had to
> do with the changes Brian is seeking, not the existing requirements.

What bad things would happen if the tests were "beefed up",
particularly the written tests for the General and Extra?

Perhaps the idea of dropping the code test would get a lot more
acceptance if it were coupled to better written testing. But it's not
- in fact, the written testing keeps getting trimmed.

Mike,

What CW subbands?

I just read the thing on QRZ.com, and it looks to me like all the NCVEC wants to do is dump Element 1 and allow Techs who have not passed a code test to have the same HF privs as Novices and Techs who have passed a code test. No subband changes, written test changes, etc. Just elimination of Element 1.

Did I miss something?

Odd that NCVEC beat NCI to the punch on this one.

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-
Amateur Service Rules to Eliminate)
Morse code testing)
)

To: The Commission

PETITION FOR RULE MAKING

The National Conference of Volunteer Examiner Coordinators (NCVEC) is the umbrella organization comprised of the fourteen organizations charged since 1984, under Section 97.519(a) of the rules of the Federal Communications Commission, 47 CFR 97.519(a) to develop and administer all Amateur Radio operator license testing and to electronically file all successful license applications with the FCC. In total, the VECs and their more than 30,000 VE teams have collectively administered nearly two million examinations during the past twenty years and have notified the FCC to issue approximately a million new and upgraded Amateur Radio licenses.

Once a year, the various Volunteer Examiner Coordinator organizations meet at their annual conference to discuss the various issues that impact Amateur Radio operator testing. At their July 25, 2003, meeting held with the FCC in Gettysburg, PA, the VECs overwhelmingly agreed that Morse code testing should be immediately ended since it was now possible to do so. It was also noted that countries have already begun discontinuing Morse examinations. As a result the VECs voted to file this Petition asking that the FCC take expedited action to allow them to discontinue administering Element 1, the 5 words-per-minute telegraphy examination as soon as possible.

Pursuant to Section 1.405 of the Commission's procedural rules (47 C.F.R. 1.405), the NCVEC hereby respectfully requests that the Commission issue a Notice of Proposed Rule Making at an early date looking toward amendment of the rules governing the Amateur Radio Service, 47 C.F.R. 97.1 et seq., as set forth herein and in the attached Appendix.

The rule changes requested herein would terminate the telegraphy examination requirement and permit existing Technician Class operators

to access HF spectrum as provided in 47 C.F.R. 97.301(e) without the necessity of passing a Morse code examination. This request to eliminate the Morse code (Element 1) examination does not necessarily have the support of the ARRL Board since they have yet to develop a position on the matter. In support of its petition, NCVEC states as follows:

I. Introduction and Background

Since the turn of the century, the Morse code, invented by American Samuel Morse and first used in 1844, has been the foundation of early distress and safety communications. Although Morse code (or CW, as it is commonly called) was the primary mode of communications from the late 19th Century through the early 20th Century, it has all but become obsolete in practically all other contemporary communication systems. Due to the emergence of satellite and digital communications, manual telegraphy is no longer used or required in any radio service other than in the Amateur Service.

Radiotelegraphy in the maritime service has been phased out in favor of modern technology. The last vestige of manual telegraphy began being phased out in the maritime service in 1988 when the International Maritime Organization adopted the Global Maritime Distress and Safety System (GMDSS).

In the 1990's, countries around the world began closing down their distress 500 kHz calling frequency watch which had been in use since 1912. The final 500 kHz message sent by the U.S. Coast Guard took place from station NMN (Chesapeake Virginia) on April 1, 1995, and they no longer monitor the frequency.

Even though the commercial world eliminated Morse code as a communications medium many years ago, it has continued on the Amateur bands because manual Morse proficiency was an international Amateur Service requirement when operating on spectrum under 30 MHz.

II. Telegraphy requirement in the Amateur Service

There are many communications modes and emissions available to the radio amateur and manual CW is just another one that certainly deserves no special priority. The amateur radio operator examination process does not require a practical demonstration in the ability to use any other mode - even though more than a thousand modes and emissions are available to the Amateur Service.

The international law previously required unspecified proficiency in the International Morse code when the operation takes place in the medium or high frequency bands. Because of technological advances, this regulation has become inconsistent with the goals of the Amateur Service since it provides a barrier to otherwise qualified individuals who wish to experiment and communicate below 30 MHz. There can be no doubt that the Morse code proficiency requirements have constituted an unnecessary and artificial impediment to fuller use of the Amateur

Radio Service for many potential and existing amateurs.

It appears that the reason that many (no-code) Technician amateurs are not upgrading to license classes that require telegraphy suggests that the Morse code requirement may be a significant barrier.

III. Morse code testing is a burden to the applicant

It should be noted that while today's personal computers can easily send and receive telegraphy, the international Morse code "sent by hand and received by ear" requirement continued as a worldwide fundamental requirement for an amateur operator license until the recent actions by the International Telecommunications Union.

The taking of the telegraphy examination is an unnecessary burden upon the applicant. Experience has shown that it is more often than not a very stressful experience for the examinee. With the elimination of the international requirement for skill in manual telegraphy, there is no longer any reasonable justification for requiring an applicant to demonstrate this antiquated skill.

It is one that must be acquired through rote memorization of the character meanings of some 43 combinations of audible dots and dashes: 26 letters of the alphabet, numerals 0 through 9, four punctuation marks and three characters unique to CW. This must be followed by numerous practice sessions until the necessary skill is achieved. Most applicants, once they pass the code exam, never use the mode on the amateur airwaves. And many, perhaps most, could not pass it again if required to do so.

While it continues to serve some amateur operators well, as it did in the early days of radio, it is now but one of many modes available to amateur operators. The lack of interest in CW has turned many prospective amateur operators away from the Amateur Service.

IV.
Morse proficiency is not an indication of a quality operator

Some amateurs believe that the effort and sacrifice needed to learn Morse code indicates a more dedicated and, therefore, a better candidate for Amateur Radio. No evidence exists, however, that supports a relationship between manual telegraphy proficiency and the quality, desirability or motivation of the operator.

What the Morse code licensing requirement does do, however, is to greatly reduce the number of applicants operating in the medium and high frequencies. Many people question why an individual with vast knowledge in the electronics field should be excluded from operating on HF spectrum due to a personal disinterest in the Morse code.

Continuing the use of Morse code proficiency as a means with which to gauge "quality" or to limit the number of amateur radio operators accessing public spectrum is certainly at odds with the FCC's mandate

to promote the wider use of radio and its commitment to the use of emerging technologies.

V. Morse proficiency should not be required to operate in the voice mode

It appears that most amateurs want to communicate in the voice mode. It makes no sense from a regulatory perspective to require radio amateurs to be Morse proficient when the greater majority of radio amateurs do not desire to use that mode and there is no regulatory reason for them to do so.

The future of Amateur Radio encompasses many modes undreamed of just a few years ago. Although manual telegraphy is a noble part of the Amateur Radio's past, it is no longer the prime emission mode.

In short, the Commission should ensure that the amateur examination elements are appropriate for the types of operation that will be performed by the licensee.

VI. An unnecessary burden upon the VEC system

The administration of a CW examination imposes an unnecessary burden upon the VE teams who must prepare and administer the CW examinations. It requires extensive preparation and special equipment to prepare and administer properly. It is often disruptive and unsettling to those other examinees who are taking one of the written examinations within the same room.

Under 97.507(d), the VEs must prepare and record a series of messages sufficient to preclude any one message from becoming known to the examinees. Each message must contain every one of the 43 telegraphy characters at least once during period of at least 5 minutes. At the prescribed speed of 5 words per minute, and at the prescribed 5 characters per word, the message is little more than 25 words in length. In practice, it is a difficult task to compose a realistic message under these limitations. It is also an unnecessary burden upon the coordinating VECs since most of them also prepare telegraphy examinations for their VE teams.

VII. An unnecessary burden upon the amateur service community

The amateur service community suffers from the loss to its ranks of a large number of potentially excellent operators who are turned away because of the CW requirement. Either because of lack of the requisite aptitude for sending and receiving CW or because of an unwillingness to spend the time acquiring a skill for which they find of no value to them, they forego becoming amateur operators.

VIII. An unnecessary burden upon the FCC

Now that the international (treaty) Morse code requirement is optional, the FCC can expect to receive numerous requests for waivers of the Morse code examination due to applicant hearing and other medical conditions in order to be compliant with the Americans with

Disabilities Act (ADA).

When there were multiple code tests, the FCC cited the international (treaty) requirement, as the reason that the five word-per-minute code test could not be waived. This case no longer applies and the FCC will have to develop procedures to guide both themselves and the VECs/VEs in handling requests for code exam waivers that are certain to come.

Dealing with requests for a waiver of the code exam could create an unnecessary burden on the FCC and VECs/VEs and consume an excessive amount of time and resources. It seems illogical to require all amateur examinees to pass a requirement that could be waived by the actions of a physician. History has shown that physician-initiated waiver requests have been very controversial in the Amateur Service.

IX. World Administrative Radio Conference 2003

The only changes made to the international Amateur Service regulations over the last 75 years concern the frequency above which amateurs may operate without Morse testing. At their Washington, DC conference in 1927, the ITU (then called the International Telegraph Union) allocated frequency bands to the various radio services and established operating guidelines and operator qualifications. It was deemed important that Amateurs prove an ability to transmit and receive communications in Morse signals since, at the time, radiotelegraphy was the primary means of long range communication.

Since then, the administrations comprising International Telecommunication Union have reviewed and voted to relax the Amateur Service's mandatory Morse proficiency requirement at every international conference capable of doing so.

In 1947 (Atlantic City), the ITU agreed that Morse proficiency should only be required when the operation took place on frequencies below 1000 MHz (1 GHz.) At WARC-59, the 1959 World Administrative Radio Conference, this level dropped to 144 MHz. A further reduction was made at WARC-79 to 30 MHz. Consequently, up until recently, Article S25.5 3 read: 25.5 3. 1) Any person seeking a license to operate the apparatus of an amateur station shall prove that he is able to send correctly by hand and to receive correctly by ear, texts in Morse code signals. The administrations concerned may, however, waive this requirement in the case of stations making use exclusively of frequencies above 30 MHz.

At WRC-2003, the international Radio Regulation Article S25.5 3 was revised to make the Morse code testing requirement a matter for each licensing administration to decide for itself. Effective July 5, 2003, Article S25.5 3 reads: 25.5 3. 1) Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals.

X. Summary of NCVEC proposal to end Morse testing

The attached appendix contains a list of the rules that must be amended if Morse code examinations are to be discontinued. These amendments propose merely to end the manual telegraphy examination and to permit Technician Class operators the same frequency privileges as those enjoyed by Technician Class operators who have passed a code exam.

Therefore, the foregoing considered, NCVEC, the National Conference of Volunteer Examiner Coordinators, respectfully requests that the Commission issue a Notice of Proposed Rule Making at any early date, proposing the rule changes set forth herein, and in the appendix attached hereto.

Respectfully submitted,

NCVEC, National Conference of VECs
P.O. Box 565101, Dallas, Texas 75356

NCVEC Rules Committee

July 29, 2003

APPENDIX
PROPOSED RULES

Proposed changes to Part 97 of Chapter I of Title 47 of the Code of Federal Regulations to delete references to the Morse code exam element. Part 97, is amended as follows:

PART 97 -- AMATEUR RADIO SERVICE

1. Section 97.301 is amended by revising paragraph (e) to read as follows. The frequency tables in Section 97.301(a), (b), ï¿½, (d) and (e) remain unchanged.

97.301 Authorized frequency bands.

The following transmitting frequency bands are available to an amateur station located within 50 km of the Earth's surface, within the specified ITU Region, and outside any area where the amateur service is regulated by any authority other than the FCC.
(d) ******
(e) For a station having a control operator who has been granted an operator license of Novice Class, Technician Class or Technician Plus Class:

Wavelength ITU Region 1 ITU Region 2 ITU Region 3 Sharing requirements,
see 97.303

HF MHz MHz MHz paragraph:

80 m 3.675-3.725 3.675-3.725 3.675-3.725 (a)
40 m 7.050-7.075 7.10-7.15 7.050-7.075 (a)
15 m 21.10-21.20 21.10-21.20 21.10-21.20
10 m 28.1-28.5 28.1-28.5 28.1-28.5

VHF MHz MHz MHz
1.25 m - - 222-225 - - (a)

UHF MHz MHz MHz
23 cm 1270-1295 1270-1295 1270-1295 (h)(i)

2. Section 97.307 is amended by deleting paragraph (f)(9) and revising paragraph (f)(10) to read as follows. Previous 97.307(f)(10) is renumbered to (f)(9). Paragraphs (f)(11) to (f)(13) are renumbered to (f)(10) to (f)(12).

97.307 Emission standards.

(f) The following standards and limitations apply to transmissions on the frequencies specified in 97.305ï¿½ of this part. (10) A station having a control operator holding a Novice Class, Technician Class or Technician Plus operator license may only transmit a CW emission using the international Morse code or phone emissions J3E and R3E.

3. Section 97.313 is amended by revising paragraph ï¿½(2) to read as follows:

97.313 Transmitter power standards.

(b) ******
ï¿½ No station may transmit with a transmitter power exceeding 200 W PEP on:
(1) ******
(2) The 28.1-28.5 MHz segment when the control operator is a Novice Class operator, a
Technician Class operator or a Technician Plus Class; or
(3) ******

4. Section 97.501 is amended by revising paragraph (a) and (b) to read as follows.

97.501 Qualifying for an amateur operator license.

Each applicant must pass an examination for a new amateur operator license grant and for each change in
operator class. Each applicant for the class of operator license grant specified below must pass, or
otherwise receive examination credit for, the following examination elements:
(a) Amateur Extra Class operator: Elements 2, 3, and 4;
(b) General Class operator: Elements 2, and 3;
ï¿½ ******

5. Section 97.503 is amended by deleting paragraph (a).

97.503 Element standards.

(b) ******

6. Section 97.505 is amended by revising paragraph (a)(1), (a)(2), and (a)(3) to read as follows.
Paragraphs (a)(5), (a)(7), and (a)(9) are deleted.

97.505 Element credit.

(a) The administering VEs must give credit as specified below to an examinee holding any of the
following license grants or license documents:
(1) An unexpired (or expired but within the grace period for renewal) FCC-granted
Advanced Class operator license grant: Elements 2 and 3.
(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General
Class operator license grant: Elements 2 and 3.
(3) An unexpired (or expired but within the grace period for renewal) FCC-granted
Technician Plus Class operator license grant: Element 2
(4) ******
(6) ******
(8) ******
(b) ******

7. Section 97.507 is amended by revising paragraph (a), (a)(2), and ï¿½ to read as follows. Paragraph (d)
is deleted.

97.507 Preparing an examination.

(a) Each written question set administered to an examinee must be prepared by a VE holding an
Amateur Extra Class operator license. A written question set may also be prepared for the following
elements by a VE holding an operator license of the class indicated:
(1) ******
(2) Element 2: Advanced, General, or Technician (including Technician Plus) Class
operators.
(b) *******
ï¿½ Each written question set administered to an examinee for an amateur operator license must be
prepared, or obtained from a supplier, by the administering VEs according to instructions from the
coordinating VEC.

8. Section 97.509 is amended by revising paragraph (f) to read as follows.
Paragraph (g) is deleted.

97.509 Administering VE requirements.

(e) ******
(f) No examination that has been compromised shall be administered to any examinee. The same
question set may not be re-administered to the same examinee.

(h) ******

---
(1)
The following organizations have entered into an agreement with the FCC to coordinate Amateur Radio examinations: Anchorage Amateur Radio Club, Anchorage, AK; American Radio Relay League (ARRL), Newington, CT; CAVEC, Inc., Huntsville, AL; Golden Empire Amateur Radio Society, Chico, CA; Greater L.A. Amateur Radio Group, North Hills, CA; Jefferson Amateur Radio Club, New Orleans, LA; Laurel Amateur Radio Club, Inc.; Laurel, MD; The Milwaukee Radio Amateurs' Club, Inc., Milwaukee, WI; MO-KAN VEC Coordinator, Richmond, KS; Sandarc-VEC, La Mesa, CA; Sunnyvale VEC Amateur Radio Club, Inc., Sunnyvale, CA; W4VEC, High Point, NC; W5YI-VEC, Dallas, TX; Western Carolina Amateur Radio Society VEC, Inc., Knoxville, TN.

The United Kingdom's Regulatory Authority
published a "Gazette Notice" on July 25, 2003, discontinuing all Morse code testing in their Amateur Service effective July 26, 2003. The effect was that all "Class B" (no code) radio amateurs in Great Britain who previously were restricted to operation above 30 MHz obtained "Class A" access to all Amateur bands. This can be confirmed at the Radio Society of Great Britain's website at:
and/or the UK "Regulatory Authority" (their telecom regulator) website at: . In addition, effective July 15, 2003,
radio amateurs in Switzerland were given immediate "provisional" authority to operate on the HF amateur bands by the Swiss Federal Office of Communications (OFCOM) while they await formal rulemaking. Citing the recent WRC-03 decision, OFCOM said the temporary permission to use the HF bands would suffice until the regulation could be changed. Many other countries are rumored to be in the process of discontinuing Morse code testing.

Richard,

I doubt anyone has questioned the direction of Morse testing. The only question is when. It may be sooner than I had guessed (I guessed a couple - 2 - of years).

>When I studied for my earliest tests there were no consumer-level
>recording methods let alone computers. My only options for practicing
>Morse were having somebody hand-send it or copying it off the air.
>Which, as a practical matter, meant copying it with a rcvr or forget
>it.

Same here. Except I had to build the receiver, learn to use it, then find hams to listen to. Did not know W1AW existed when I was studying for Novice so I listened to other hams.

>I'm still a very strong supporter of learning Morse via the W1AW
>code practice sessions. Today they transmit computer-generated code
>and back then I believe they used tape-generated code so it has always
>been quite precise. I'll concede that I'm only around 150 miles from
>the station so they boom here on 80M and QRM wasn't/isn't a problem.
>Might be more difficult from the west coasts but I don't know.

W6OWP used to do west-coast runs but I think that has ended. The antenna farm used for code practice and bulletins at W1AW is designed to blanket the USA on all bands. Full legal limit into long Yagis aimed at the West Coast on all bands where a Yagi is practical.
>
>I still recommend W1AW over any of the "canned" aids. Two downsides of
>course are that W1AW does not send Farnsworth and one needs a
>half-decent HF rcvr.

W1AW DOES send Farnsworth at the slower speeds! And they've done so since before I ever heard of them - 35+ years. I think they transition at 13 or 15 wpm.

Bulletins are sent at 18 wpm so there's even more practice.

One drawback/advantage of W1AW is that it is sent on a fixed schedule. If you simply cannot be at the rx at the appointed time, you're outa luck. OTOH, having a fixed preset practice time tends to help some folks actually DO IT rather than talk about it.

Another trick I've done for years: Have the rx on and tuned to a CW station whenever possible. I used to do homework with the cans on and tuned to a CW station - any station - as background. After a while it became like listening to somebody talk.

>Rescue was performed, but his HT was confiscated!

Yep - but you gotta tell "the rest of the story".....

The ham in question called for help on a police frequency, which he was not
authorized to use. Yes, anyone can use any frequency or mode in a life-or-death
emergency when there is no other option, but the authorities demonstrated that
the ham's HT would bring up several local repeaters from the rescue site - all
of which had autopatch that could call 911.

Case closed.

>supposed to be 5wpm.

The metric used is how many characters are sent in a minute. 5 wpm is 25 characters per minute. Letters count as 1 character each, numbers and punctuation count as 2 characters each.

You can also have the test done "non-Farnsworth" style if you want.

Keep believing that myth....I have a bridge for sale, too.

The only reasons that the courts have not thrown out the code
requirement are:

(1) a case has never been brought (Federal courts do not issue
advisory rulings, they require an actual case) because:

(2) FCC requires that suitable accommodations be made for an
applicant's observable or claimed disabilities when tests which do
not otherwise discrimninate are given, and

(3) the Federal courts in a matter such as this require that the
plaintiff exhaust all administrative appeals and in general they
defer to the judgment of the regulatory agencies in the area of the
agency's expertise such as the requirements for a license as long as
the requirements are equitably applied and reasonable accommodations
(see #2 above) are made.

>Shortly after the US ratifies the
>new treaty which no longer requires the ability to send and receive
>code the US courts will throw out the FCC's code requirement.

Nah... even if such a case is brought, any regulatory attorney worth
his/her salt can tie it up pending FCC action in its own sweet time.

>The
>courts take a dim view of irrelevant requiremnts, you are going to
>have a a hard time convincing the courts that ability to receive code
>at 5 wpm is necessary requirement to "talk over the radio".

See #3 above.

>Morse has much in common with the use of the sliderule. 40 years ago
>when I was in school engineers spent several weeks of class studying
>the use of the sliderule and logarithms to simplify calculations.

Maybe in your school. In my engineering school - one of the top 3
in the US - one had to know how to use both the sliderule and log
tables in order to be admitted, which for me was 50 years ago next
month....

>I have better ways to spend my time than studying Morse code but I
>still can find the power of a number using a log log slide rule

K+E Log Log Duplex Vector -- I take it out once a year to prove to
my computer-geek son that I can still do it.....

But as to communications law....leave that to us attorney
specialists. This is MY field.

> Too much apathy in amateur radio.

Uhh Brian, let's look at just how much credibility the PCTA's have in this newsgroup. Nada, zilch, nothing.

About the only thing we could do is to ask someone like Carl to tell us what to do.

What I would say is to keep the code test in the future, and to maintain a high level of proficiency in the writtens. That is what I believe the ARS should do. I can and will file my comments, but it isn't going to mean a thing.

What the NCTA's appear to want is an open acceptance of what they have brought to bear on the Amateur community. Sorry, ain't going to happen. I'll welcome and encourage new hams, but I won't change my mind about how I think the ARS should be structured.

Personally, I think the NCTA's haven't quite figured out that THEY have become the mainstream in Amateur radio. YOU WON! NOw you have to start running the show.

People who agitate for change very often have a hard time adjusting to their new position after achieving it, so don't feel too bad.

This whole concept is why I chastise Carl and Bill for not being more prepared to ease the transition after their victory. The PCTA's, such as Larry, Dick, Dave, Jim, Dan, and myself and others, are a diverse group. We have in common the belief that the code test is a good thing for Amateur radio, but beyond that we have opinions that run all over the place.

This is why I say Carl Has to get his people in line. You are one of his people, All the rabble rousing CB'ers are his people, All the people who oppose Morse Code testing are his people. You are now the status quo.

You have to deal with it. That is exactly how it is. Amateur radio's future now hinges on you. And there is nothing a PCTA could do about it even if they wanted to.

If/when the FCC totally eliminates code testing it will have made the
second
biggest mistake of its tenure of regulating amateur radio. The firstwas
the introduction of a Citizens Band on frequencies where
propagation causes RF to travel long distances.

Anyone who beleves otherwise will, in time, learn the truth.

Dick

>A recurring review was and is required. Do you know how often they
>must review the regs?

Brian:

Every four years. Which means that the present Element 1 code test has
at least until April 15, 2004, plus the time it takes for the 2004 Quadrenneal
Review, then the time it takes for the FCC to review any Petitions for
Rulemaking I may have received, then the time it would take for the NPRM,
comment, and reply comment process to take place. Code testing could
probably go on for anywhere from 2 to 4 years from now. I never said that
it wouldn't be eliminated, just that it isn't a "front-burner" issue for the
FCC.

> and may not be all that
>> motivated to go through that process again in such short order.
>
>They don't have a choice. It's called a mandate.

What mandate? Who is "mandating" the elimination of code testing?
The ITU left it up to the individual administrations whether or not they would
require code testing in their country's ARS licensing system. There is
no "mandate" to eliminate it whatsoever.

> Since
>> they felt that the 5 WPM test requirement was acceptable to those

Mike:

ROFLMAO!!! I think the fact that the NCTA's are the new "mainstream" in
amateur radio is nothing short of the laugh of the century! During the code/
no-code (test) debate, they promised the following:

- Tremendous growth in the numbers of new hams, particularly through
the involvement of young, computer literate, technically-inclined people.

- Tremendous increases in the "advancement of the state of the art," with
the aforementioned young people taking us into the high-speed digital age,
giving us the ham radio equivalent of all the commercial wireless services now
available on the cell phone networks and the internet.

- Greater diversity in the ham radio community, through the involvement of
more minorities and women.

- Growth in the numbers of physically-challenged hams due to the
elimination
of the Morse code test.

That's all I can specifically recall. That's enough, however. It will be very interesting
to see just how long it takes for any of the above to take place whenever the FCC gets around to acting on WRC-03. The NCTA has a lot of promises to keep, and many miles to go before they sleep!

>old timers want to just make random contacts and are not interested in the
>technical aspects of the hobby.

Non-responsive. The question was where are the fresh new ideas of the newcomers that have been brought into amateur radio through reduced licensing standards. It wasn't a request for more whining about the "old timers."

>I have proposed new ideas, projects, etc. I didn't say I just want others to
>do
>those projects for me. I would help with those projects - if there were
>interest. I have asked to volunteer for those types of activities on several
>occasions. The old-timers in the club are NOT interested in those types of
>activities.

Then screw the old timers and get your fellow newcomers involved. Duh!!!

>However, they will put extra effort into teaching code classes to
>get people to operate Morse code.

Is that a bad thing?

>Don't blame the newcomers - its the old-timers that want to keep things as
>they are.

Ok, we get it.

If that is the case in your club, then simply work around the old timers that you find so offensive, and get your fellow newcomers involved in your projects. What is so difficult about that? Or would you just prefer to whine, instead?

>PETITION FOR RULE MAKING

>The National Conference of Volunteer Examiner Coordinators (NCVEC) is
>the umbrella organization comprised of the fourteen organizations
>charged since 1984, under Section 97.519(a) of the rules of the Federal
>Communications Commission, 47 CFR 97.519(a) to develop and administer
>all Amateur Radio operator license testing and to electronically file
>all successful license applications with the FCC. In total, the VECs
>and their more than 30,000 VE teams have collectively administered
>nearly two million examinations during the past twenty years and have
>notified the FCC to issue approximately a million new and upgraded
>Amateur Radio licenses.

The NCVEC is not, however, an organization where the VECs are elected, or where individual VE opinions were gathered or solicited.

>Once a year, the various Volunteer Examiner Coordinator organizations
>meet at their annual conference to discuss the various issues that
>impact Amateur Radio operator testing. At their July 25, 2003, meeting
>held with the FCC in Gettysburg, PA, the VECs overwhelmingly agreed
>that Morse code testing should be immediately ended since it was now
>possible to do so. It was also noted that countries have already begun
>discontinuing Morse examinations. As a result the VECs voted to file
>this Petition asking that the FCC take expedited action to allow them
>to discontinue administering Element 1, the 5 words-per-minute
>telegraphy examination as soon as possible.

No surprise there.

>Pursuant to Section 1.405 of the Commission's procedural rules (47
>C.F.R. 1.405), the NCVEC hereby respectfully requests that the
>Commission issue a Notice of Proposed Rule Making at an early date
>looking toward amendment of the rules governing the Amateur Radio
>Service, 47 C.F.R. 97.1 et seq., as set forth herein and in the
>attached Appendix.

No imagination, either.

>The rule changes requested herein would terminate the telegraphy
>examination requirement and permit existing Technician Class operators
>to access HF spectrum as provided in 47 C.F.R. 97.301(e) without the
>necessity of passing a Morse code examination. This request to
>eliminate the Morse code (Element 1) examination does not necessarily
>have the support of the ARRL Board since they have yet to develop a
>position on the matter. In support of its petition, NCVEC states as
>follows:

>I. Introduction and Background
>
> Since the turn of the century, the Morse code, invented by American
> Samuel Morse and first used in 1844, has been the foundation of early
> distress and safety communications. Although Morse code (or CW, as it
> is commonly called) was the primary mode of communications from the
> late 19th Century through the early 20th Century, it has all but become
> obsolete in practically all other contemporary communication systems.
> Due to the emergence of satellite and digital communications, manual
> telegraphy is no longer used or required in any radio service other
> than in the Amateur Service.

Amateur radio operators, however, use it extensively. On the HF/MF amateur bands, it is the second most popular mode of communications, only slightly behind SSB in popularity.

The Amateur Radio Service is unlike other radio services in its needs and resources.

> Radiotelegraphy in the maritime service has been phased out in favor of
> modern technology. The last vestige of manual telegraphy began being
> phased out in the maritime service in 1988 when the International
> Maritime Organization adopted the Global Maritime Distress and Safety
> System (GMDSS).
>
> In the 1990's, countries around the world began closing down their
> distress 500 kHz calling frequency watch which had been in use since
> 1912. The final 500 kHz message sent by the U.S. Coast Guard took
> place from station NMN (Chesapeake Virginia) on April 1, 1995, and they
> no longer monitor the frequency.

Most radio amateurs are not on ships.
>
> Even though the commercial world eliminated Morse code as a
> communications medium many years ago, it has continued on the Amateur
> bands because manual Morse proficiency was an international Amateur
> Service requirement when operating on spectrum under 30 MHz.

There is no requirement that any radio amateur actually use Morse code. Radio amateurs use it by choice.

Other services are constrained by considerations of cost, particularly labor cost. They consider elimination of the need for a skilled radio operator to be progress. Amateurs do not.

To most other radio services, radio is but a means to an end, not an end in itself. Amateur radio, by contrast, is radio for its own sake.

> II. Telegraphy requirement in the Amateur Service
>
> There are many communications modes and emissions available to the
> radio amateur and manual CW is just another one that certainly deserves
> no special priority. The amateur radio operator examination process
> does not require a practical demonstration in the ability to use any

> other mode - even though more than a thousand modes and emissions are
> available to the Amateur Service.

Except for single sideband radiotelphony, none of those other modes approaches
Morse code in popularity on the amateur bands below 30 MHz.
>
> The international law previously required unspecified proficiency in
> the International Morse code when the operation takes place in the
> medium or high frequency bands. Because of technological advances,
> this regulation has become inconsistent with the goals of the Amateur
> Service since it provides a barrier to otherwise qualified individuals
> who wish to experiment and communicate below 30 MHz. There can be no
> doubt that the Morse code proficiency requirements have constituted an
> unnecessary and artificial impediment to fuller use of the Amateur
> Radio Service for many potential and existing amateurs.

The removal of the code test requirement for amateur licenses above 30 MHz has
not resulted in a technological revolution in amateur radio on those
frequencies. There is no reason to expect one below 30 MHz.

> It appears that the reason that many (no-code) Technician amateurs are
> not upgrading to license classes that require telegraphy suggests that
> the Morse code requirement may be a significant barrier.

> III. Morse code testing is a burden to the applicant
>
> It should be noted that while today's personal computers can easily
> send and receive telegraphy, the international Morse code "sent by hand
> and received by ear" requirement continued as a worldwide fundamental
> requirement for an amateur operator license until the recent actions by
> the International Telecommunications Union.
>
> The taking of the telegraphy examination is an unnecessary burden upon
> the applicant. Experience has shown that it is more often than not a
> very stressful experience for the examinee. With the elimination of
> the international requirement for skill in manual telegraphy, there is
> no longer any reasonable justification for requiring an applicant to
> demonstrate this antiquated skill.
>
> It is one that must be acquired through rote memorization of the
> character meanings of some 43 combinations of audible dots and dashes:
> 26 letters of the alphabet, numerals 0 through 9, four punctuation
> marks and three characters unique to CW. This must be followed by
> numerous practice sessions until the necessary skill is achieved. Most
> applicants, once they pass the code exam, never use the mode on the
> amateur airwaves. And many, perhaps most, could not pass it again if
> required to do so.

Written tests are a burden to the applicants, too.

Most radio amateurs do not construct or repair their own equipment, yet they
are required to know something about how it works.

> While it continues to serve some amateur operators well, as it did in
> the early days of radio, it is now but one of many modes available to
> amateur operators. The lack of interest in CW has turned many
> prospective amateur operators away from the Amateur Service. IV.
> Morse proficiency is not an indication of a quality operator
>
> Some amateurs believe that the effort and sacrifice needed to learn
> Morse code indicates a more dedicated and, therefore, a better
> candidate for Amateur Radio. No evidence exists, however, that
> supports a relationship between manual telegraphy proficiency and the
> quality, desirability or motivation of the operator.

However, it should be noted that most of the Commission's enforcement actions for poor and illegal operating practices such as jamming, obscenity/profanity, failure to identify, operation outside of license privileges and failure to heed bandplans are against amateurs using voice modes, not Morse code or digital modes.

> What the Morse code licensing requirement does do, however, is to
> greatly reduce the number of applicants operating in the medium and
> high frequencies. Many people question why an individual with vast
> knowledge in the electronics field should be excluded from operating on
> HF spectrum due to a personal disinterest in the Morse code.
>
> Continuing the use of Morse code proficiency as a means with which to
> gauge "quality" or to limit the number of amateur radio operators
> accessing public spectrum is certainly at odds with the FCC's mandate
> to promote the wider use of radio and its commitment to the use of
> emerging technologies.
>
> V. Morse proficiency should not be required to operate in the voice mode
>
> It appears that most amateurs want to communicate in the voice mode.
> It makes no sense from a regulatory perspective to require radio
> amateurs to be Morse proficient when the greater majority of radio
> amateurs do not desire to use that mode and there is no regulatory
> reason for them to do so.

Since most amateurs do not desire to build their own equipment.....
>
> The future of Amateur Radio encompasses many modes undreamed of just a
> few years ago. Although manual telegraphy is a noble part of the
> Amateur Radio's past, it is no longer the prime emission mode.
>
> In short, the Commission should ensure that the amateur examination
> elements are appropriate for the types of operation that will be
> performed by the licensee.

Following this logic, the written exams should be stripped of anything a licensee does not have an interest in.

> VI. An unnecessary burden upon the VEC system
>

> The administration of a CW examination imposes an unnecessary burden
> upon the VE teams who must prepare and administer the CW examinations.
> It requires extensive preparation and special equipment to prepare and
> administer properly. It is often disruptive and unsettling to those
> other examinees who are taking one of the written examinations within
> the same room.
>
> Under 97.507(d), the VEs must prepare and record a series of messages
> sufficient to preclude any one message from becoming known to the
> examinees. Each message must contain every one of the 43 telegraphy
> characters at least once during period of at least 5 minutes. At the
> prescribed speed of 5 words per minute, and at the prescribed 5
> characters per word, the message is little more than 25 words in
> length. In practice, it is a difficult task to compose a realistic
> message under these limitations. It is also an unnecessary burden upon
> the coordinating VECs since most of them also prepare telegraphy
> examinations for their VE teams.
>
> VII. An unnecessary burden upon the amateur service community
>
> The amateur service community suffers from the loss to its ranks of a
> large number of potentially excellent operators who are turned away
> because of the CW requirement. Either because of lack of the requisite
> aptitude for sending and receiving CW or because of an unwillingness to
> spend the time acquiring a skill for which they find of no value to
> them, they forego becoming amateur operators.

Yet the growth in amateur radio from 1990 to 2000, when there were both medical waivers and a nocodetest license, was almost identical to that from 1980 to 1990, when all amateur licenses required code tests and there were no waivers..

> VIII. An unnecessary burden upon the FCC
>
> Now that the international (treaty) Morse code requirement is optional,
> the FCC can expect to receive numerous requests for waivers of the
> Morse code examination due to applicant hearing and other medical
> conditions in order to be compliant with the Americans with
> Disabilities Act (ADA).

Yet it was not compliance with the ADA that resulted in medical waivers for the 13 and 20 wpm code tests.

> When there were multiple code tests, the FCC cited the international
> (treaty) requirement, as the reason that the five word-per-minute code
> test could not be waived. This case no longer applies and the FCC will
> have to develop procedures to guide both themselves and the VECs/VEs in
> handling requests for code exam waivers that are certain to come.
>
> Dealing with requests for a waiver of the code exam could create an
> unnecessary burden on the FCC and VECs/VEs and consume an excessive
> amount of time and resources. It seems illogical to require all

> amateur examinees to pass a requirement that could be waived by the
> actions of a physician. History has shown that physician-initiated
> waiver requests have been very controversial in the Amateur Service.

By this logic, the written tests will also be a target of waiver actions. For example, profoundly deaf people are currently required to study for exams which include numerous questions on SSB and other voice modes even though there is little chance they will ever use those modes.

> IX. World Administrative Radio Conference 2003
>

This proposal simply drops Element 1 without making any other changes. Oddly enough, if it were adopted, Technicians would gain a bit of 10 meter SSB. Most of the privileges Technicians would gain would be slices of 80, 40, 15 and 10 meter CW.

The FCC didn't have a choice in the second. The Congress ordered
the Commission to discontinue CB licensing after the FCC testified
that catching unlicensed CB stations was the biggest problem in
field enforcement. No CB license required, no expenditure on
catching unlicensed CBers, so they thought.

I would have gave money 10 years ago if the ARRL had advocated dropping that flippin' CW. Now that the ARRL is being pushed from the top down all they want is money. Sounds like another government agency to me.

How soon we forget...maybe we ought to replace the Element 1 Morse test with an Element 1 amateur radio history test...

Off the top of my head.....

In days of yore when George I reigned in Washington, some amateur in Pennsylvania could not pass the 13 wpm test as hard as he tried. So one day whilst in QSO with JY1, he mentioned that what ham radio in the USA really needed more than anything else was a mechanism for him to get an upgraded license without passing the higher speed code test because he had (alleged) medical problems that (allegedly) precluded him from dealing with Morse code above 5 wpm.

So when next in QSO with George I, JY1 said (in essence) "Georgie, if you want to quarter your troops in my country - JY1 being King Hussein of the Hashemite Kingdom of Jordon - do my dear friend a favor and let him get an upgraded ham license with no higher-speed code test".

So George I summoned the Chairman of the FCC ("Mad Man Mark" Fowler or Al "Who the heck is he" Sykes - forget which) to his oval chamber, clapped his hands like the Pasha does in the movies, and said "do it".

"So it was written, so it was done."

> Dick

Hey Dick........

Were you perchance a Ham-Op in the 80's and early 90's
when the infamous "14.313 Booer Wars" between
KV4FZ's "anti-phone patch" factions and the opposing
Maritime Mobile Net's faction were in full swing..?

It was QUITE a time!

Just about any week night and all weekend long you could
tune to either 14.300 or 14.313 and hear any variety of
catcalls, music, snide comments, foul language, noisemakers,
the infamous "dirty black box" and anything else in-between.
(the way it worked was if the MM Net was on .313 then the
nuts were on .300 and visa-versa) This went on for close
to 12 Years that I was aware of. It became known as the
Ham Radio Comedy Channel and before it ended it drew in
just about every kook from 75 Meters.

Guess what Dick...? It turned out that 90% of the WORST
on the air offenders and un-ID'ed stations turned out to be
Hams with Advanced and Extra Class Licensees, most of
of which had held that ticket for 10 or more years duration
and more importantly, at that time one needed to pass a 13 and 20
WPM code test respectively to obtain in the first place!
(...unless of course, you bribed the VEC for your code-credit
which was occuring in parts of the Southeastern USA at the time)

So Dick, please remember that keeping Code WILL NOT
keep the fruitcakes out of the hobby, nor will it bring more stations
into the same. The fruitcakes are already here, and for the most
part, the general public does not know ham radio from a wristwatch
nor would they as the "radio craze" of the late-70's CB Era

ended a VERY long time ago.

Besides, if they (the public) want "radio communications" they are
going to go to WalMart and purchase a pair of blister-packed FRS
Radios for $39.95 from off the pegboard in Asile #7. (...and if you
went to WalMart back in April or May, you could have snagged
a pair of full-channel Motorola FRS Radios for $26.68 as I did
when they were on sale)

I've been in ham radio since the late 60's and
supported the ending of code
in the 80's when it would have done some good.
Forget it doing ANY good now of course as
today's youth are more interested in the Internet
than in ham radio. If they want "radio" there's FRS.
Buy em, put in 3 type AA Cells and your talkin with FRS.

Sorry but that's the truth.

Still, it's ****Un-be-freaking-lievable**** that the
same ages-old debate of if to keep stupid
damm old code or not is still going on.
Then again, ham radio has been in an arrested state
of development for Years.

Looks like ole Wayne Green was right ALL ALONG.

.... .. :) :) :)

WITHOUT the benefit of any petition, NPRM or any paperwork of any sort IIRC.
Which is why I once said (right here) that the No code train could easily be
derailed by a "word" from the right source to a certain recipient.
So far it hasn't come. It probably won't.

========== begin quoted text ==========

Subject: Morse Code Petition Filed
Date: Wed, 30 Jul 2003 09:04:39 -0800
From: Jim Wiley <jwiley@alaska.net>

RE: Morse code testing petition

The attached MS Word file is the NCVEC petition as filed with
the FCC today. The NCVEC voted at the recent annual meeting
to draft this petition and submit it ASAP. The committee
selected to draft this petition consisted of : Fred Maia,
W5YI, (Committee Chairman) (W5YI VEC); John Johnston, W3BE,
(Laurel ARC VEC); Scott Neustadter, W4WW, (Central America
VEC); Jim Wiley, KL7CC, (Anchorage ARC VEC).

In case some of these names are unfamiliar, John Johnston,
W3BE, formerly with the FCC, is the individual who originally
wrote most of what we know today as the "Part 97" regulations
that govern Amateur Radio. Scott Neustadter, W4WW, is an
aerospace engineer with Boeing Co., and is the individual who
heads up the national VEC Question Pool committee, and in fact
is the person who generates most (but not all) of the theory
questions found on exams. Scott is, in the truest sense of
the word, a genuine "Rocket Scientist". Fred Maia, W5YI,

started one of the largest VEC organizations in the country. I am unsure whether his group or the ARRL VEC leads in number of exams given. Fred sold his business about 3 years ago, and remains active as a virtual consultant in Amateur Radio licensing matters. I joined the committee for two reasons, first, because of the ongoing project we (the Anchorage ARC VEC) initiated to do remote testing, and also because it looked like something that could be very interesting. The members of the committee were nominated from the floor at the July 25th VEC conference in Gettysburg, PA, and were approved by a vote of all NCVEC representatives present.

This petition is the first of a series that we (as the NCVEC) plan to file. Assuming that the first petition is successful, we will follow up in several months with additional petitions concerning modifications to the amateur radio licensing structure, and reallocation of the present Novice CW bands on the 80, 40, and 15 meters. Experience gained with the results of the first petition will be used to guide us in filing the follow-on petitions,. all of which are related in some way.

All of this will be discussed at the upcoming AARC general membership meeting, this Friday. Plan to attend, and bring your questions. I will answer them if I can.

- Jim,

If you read the proposal, it's a bit confusing in how they specify frequency
for privilege. The only two scenarios that make sense is that they propose
rolling in novice CW space with generic space, or that novice space is
allowed into the CW space even though they've never been tested for
CW.

The second I approve of. I think right now, today, all tech operators
should be allowed on HF in the CW space for novices. Ie, give them
the CW space to play with IN CW ONLY.

Ce-mag.com is the world's foremost on-line resource for international developments in regulatory compliance for electronics engineers.

In the latest issue BPL, PLC and PLT covered in very great detail from the regulatory stand point.

http://www.ce-mag.com/archive/03/ARG/hansen1.html

http://www.ce-mag.com/archive/03/ARG/hansen2.html

Brief excerpt (Conclusion)
"PLC technology, in principle, is potentially attractive, if it were to become compatible with existing telecom technologies. PLC technology is still premature in terms of EMI prevention. PLC has little to offer over the competitors and certainly does not justify more EMI.

Standards will evolve relatively slowly. The requirement of the EMC Directive with harmonized norms (to conducted EN 55022) are not met by most PLC systems, regardless of the stricter limits of regulations such as NB 30.

It is unlikely that PLC will experience widespread application under its currently implemented status. With delays in implementation and lackluster client acceptance, even the business case is becoming less attractive."

The article is written from the European viewpoint but very relevant to BPL.

Chic N Pox wrote:

> , please remember that keeping Code WILL NOT
> keep the fruitcakes out of the hobby,

Oh, no one ever expected code or anything else to keep ALL the nutcases out of ham radio, nor anywhere else. We've always had a few bad apples, but they had always been few enough that the rest were able to keep them from spoiling the whole barrel.
With the code test gone, that filter -(yes, even 5WPM *is* a filter, and I would remind you that no filter catches _all_ the unwanted trash)- disappears, and there is just no other stopper for the influx of spoilers will turn out to be unstoppable by any means short of gutting the ARS.

It's a fact, was a fact, and WILL be a fact. Live with it. I will.

By that time BPL will have HF wiped out anyway, and Hey! What a coincidence!

Maybe there is method to all this madness after all!

Well, responding in an equally sarcastic manner, you're perfectly free to think that if you wish, Mike. However, I think we should have reasonable requirements that are neither too simplistic nor too difficult. Those requirements should address the realistic needs and goals of Amateur Radio without attempts to use them to unfairly exclude others. In my opinion, the current written tests address the realistic needs and goals of Amateur Radio, while the code test does not.

> Dwight, it all depends on what you mean by
> unnecessary.

Necessary and reasonable, both words used throughout my comments, are pretty much self-explanatory. If that doesn't satisfy you, read the paragraph I wrote above.

> CB'ers are on the air on HF. Many run power, illegal
> or not. And no one has taken a test to do that.
>
> This proves that * you don't need any test at all* to
> successfully run a station at HF frequencies.

But can one do so safely and in compliance with the rules and regulations? Of course not. And that is why the actions of that CB'er is illegal. And it is also why that example is not applicable to ham radio.

> And reasonable requirements can be anything from a
> difficult test to no test at all. just depends on
> who is doing the reasoning.

The FCC is doing the reasoning. We're simply agreeing or disagreeing with that reasoning.

> The ARS can be what we make of it. All is arbitrary,
> and we have to start with an idea of how adroit we

> want the typical member to be and go from there. From
> EE to CB.

In that case, why stop with just excluding "dumbed down" people. There is just as many reasons to write rules to exclude the poor. 'Those people' can't buy good radios and the cheap radios owned by 'those people' can cause problems on the ham frequencies. Clearly, we should write rules to get rid of anyone who earns less than $50k. When you start down the path of intentionally excluding others, it has the tendency to go much further then you ever intended.

The training CD's aren't bad for practicing the code if you know the code
and just want to get better. The real situation is that a person needs to
still learn the code in the beginning. It would the same as if I was
listening to Chinese language and didn't know a word of the Chinese language
versus knowing the language on a basic level and listening to Radio China or
something like that......

> responsibilites.

Yes, reasonable requirements and responsibilities. The FCC is not going to change those requirements just because you and perhaps a few others want to exclude what you call "dumbed downed" people. Instead, you'll have to make a factual, not just rhetorical, link between those people and specific problems. You'll also have to establish that your remedy (stiffer license exams) will resolve those specific problems. Until then, all you're doing is blowing around a lot of hot air and slandering fellow hams.

> If the "American public" is not up for meeting
> the requirements and responsibilties which come
> with a ham license they can still go to 27

> were created.

Man, you're talking about the American people as if they were some kind of minor regard in this country. I sincerely hope the FCC never shares that attitude.

> And when it's all said and done we're back to
> the Cheerios syndrome. When was the last time
> you know of when a wannabe ham said "geez,

A wannabe ham is a person who, by definition, has never taken the license exams. How can anyone who hasn't taken the exams possibly comment on their content?

> Right. I support keeping the bar at it's current
> level. I oppose lowering the bar to a lower level

> as you suggest. That's the way it is.

Excuse me? Would you please show me where I have EVER even suggested the possibility of "lowering the bar" when it comes to the written tests? With the exception of the code tests, I have repeated said throughout this thread, and elsewhere, that I fully support the current license requirements. Instead, I have simply said I don't support raising that bar solely to exclude others. Now, if you can show me how raising that bar is necessary for Ham Radio (not just to exclude others), we'll talk.

> You can put that in bank right now. There is

Zoning laws, job policies, and ham licenses, all serve a legitimate purpose. Policies or rules designed solely to exclude don't.

> Just when and where did I state any such BS please?

A question has a question mark on the end, Brian. That question mark was on the end of my sentence.

> Here's your opportunity to parade out your list of

> behind SSB in popularity.

1) Just because it won't be tested for doesn't mean that it can't be used!
2) In this petition, they made NO adjustment to the "CW protected bands."

It is undoubted that someone will come along with a follow-up petition to decrease or eliminate the CW bands. I would be in favor of reducing their size to between 1/3 and 1/4 of each band (in many places, it's 1/2 of the band), but not complete elimination. Along with CW in many places come some of the digital operating modes (at least on HF) - and those too need protection from voice.

PS: I haven't significantly used code since I passed it on the exam for my license, nor do I plan to. (If you look me up, you'll know that I have at least 13wpm because I held an Advanced as my prior license class from 10 years ago.)

> There is no requirement that any radio amateur actually use Morse code. Radio
> amateurs use it by choice.

Justification for it NOT to be a requirement.
(Do we all know what requirement means? :-))

> Written tests are a burden to the applicants, too.

Are you advocating no license testing at all? How about no licenses? Having to fill out the paperwork is a burden too!

(I am not advocating dropping the license requirement; just showing that his argument can be taken ad absurdium.)

> However, it should be noted that most of the Commission's enforcement actions
> for poor and illegal operating practices such as jamming, obscenity/profanity,

> digital modes.

Profanity, by itself, is illegal? The FCC has never said that. There may be limits and conditions where it's inappropriate, but there have been findings that in some very limited contexts that profanity by itself does NOT cause a violation to have occurred.

> Following this logic, the written exams should be stripped of anything a

> meter CW.

I don't see a problem with that. What's your problem with it?

This petition is meant to address the change in international agreement
dropping the code requirement as a license prerequisite and NOTHING MORE.
They're not out to overhaul the entire service; just this one part. At least
they're doing it in a way that has no impact on the rest of it.

If you want to mess with the mandated bandplans, file your own petition.

If that were true, then where is the requirement to have "element 1 credit" in
47 CFR 97.301(e)? I don't see it anywhere in the text!

PS: "Law" usually refers to STATUTE, not agency regulation. The procedures
for the creation of each are quite different.

> The "AND" in 97.301(e) is *not* translatable into an "OR"which is what
> you're obviously trying to twist it into to suit your own agenda.

You couldn't be more wrong! I have not attempted to twist this into an "OR."
The originator of the thread, who professed that no-code technicians can now
operate HF, is the one who needs this to be an "OR." I clearly have argued
that "AND" means "AND" - i.e. BOTH conditions cited are necessary to be met.
What I have said is that the second condition is now IMPOSSIBLE TO MEET as it
is currently stated, and thus Technicians and Novices LOST THEIR HF PRIVILEGES.

> It's a brick wall. If ya don't meet the current existing FCC
> requirements for passing the Element 1 test the rest of 97.301(e) is

> automatically rendered completely moot PERIOD.

Element 1 credit is NOT a requirement for 47 CFR 97.301(e). Compliance with the non-existent international regulation is.

> No rocket science required, just takes a bit common sense.

Which you seem to lack, since you are substituting one requirement for another, but there's no provision elsewhere in the regulations to do so.

That's not an "international requirement." That's a NATIONAL OPTION.

> It's within the international requirement for a country to set the Morse code
> requirement at 20 wpm, 10 wpm, 5 wpm, or 0 wpm. FCC has set 5 wpm for now. That

> Exactly! Each country MUST set a Morse code requirement of some kind. The USA
> has 5 wpm - for now.

That's not what S25.5 says now. It says that a country may choose to have no
requirement.

Show me how you comply with "no requirement?"

(The question is meaningless, and so is your position.)

> You can argue this all you want but the end result of it is that FCC still
> requires Element 1 credit for all HF ham licenses. Don't believe me? Ask 'em.

The rules have no such requirement. If 47 CFR 97.301(e) required "element 1 credit," it would state so. It doesn't. It does require compliance with an "international requirement" - but there is no such requirement.

Read back over Brian's messages in this thread. His stated goal is to exclude "dumbed down" people with stiffer license exams. He has given no real evidence to suggest that doing so would improve ham radio or further the purpose and goals of ham radio. Likewise, he has offered no real evidence to suggest that his proposal would solve any specific problem with ham radio. Instead, he has focused solely on the idea of excluding people.

> But who decides what requirements are excess? It
> all comes down to opinion.

The FCC does. All we can do is agree or disagree with their decisions. However, if one disagrees with their decisions and wants others to agree with that (or wants the FCC to change their decisions), it is obviously up to that person to give solid reasons why. Brian's stated reasons are to exclude 'dumbed down" people, without any real evidence to back that up. I just don't think that is a solid reason.

> the written testing keeps getting trimmed.

I disagree. The written tests have been "beefed up" when necessary. For example, the Technician and other license exams were "beefed up" several years ago to put more emphasis on RF exposure levels and RF environmental safety practices. There was a need for those changes. I just don't see a need to "beef up" the license exams just for the sake of "beefing up" the license exams, especially when there is no real benefit in doing so.

I agree with this analysis, but disagree with the conclusion stated below:

> Although my interpretation of the rule is that no-code Techs do have
> access to Novice/Tech HF frequencies, I hesitate to recommend that they do
> this without some kind of interpretation from the FCC, which it seems
> could be almost as time consuming to obtain as a clarifying change in the
> rule. OTOH, in light of the lack of any FCC records as to which Tech is
> what, I seriously doubt that they care.

Mr. Palmer's conclusion is wrong. What we have is an "international requirement" that cannot be complied with. That means that one of the regulatory requirements set by the FCC is not met, NOR CAN IT BE MET by any licensee. Since one of the conditions is impossible to meet, 47 CFR 97.301(e) actually conveys NO PRIVILEGE AT ALL (effective July 5, 2003).

It's not that no-code technicians may operate HF. It's that coded-technicians and novices may NOT operate on HF bands. Their privilege was automatically STRIPPED by the FCC's regulation being dependent on the international one.

I concur. However, this section identifies an OPTION, not a requirement.

> > The administration has determined that the persons seeking a
> > license
> > must pass a 5 wpm Morse code test.
>
> Not so fast. Where does it say that in respect of the Novice frequencies?

For novices, element 1 credit is a prerequisite per section 97.501. However,
for technicians, I agree that it is not.

> > 3. There is nothing in the rules that we are out of compliance with.
>
> Who said there was? Maybe D Stussy, but his line of argument is truly
> wierd

Maybe you don't understand it, but that doesn't mean that my position is
incorrect.

47 CFR 97.301(e) indicates that the LICENSEE is to establish compliance with an
international requirement that has been revoked (and replaced with an option).

One cannot comply with a requirement that does not exist. Such is impossible.
This means that one of the requisite conditions is FAILED, and NO PRIVILEGE is
conveyed.

> > Using the argument that Morse code testing has been abolished is quite
> > simply *wrong*.
>
> No-one is saying it has been abolished for the General or the Extra

It certainly has NOT. It's a requirement per 47 CFR 97.501 for those license
classes.

Rules: You have obviously NOT been reading very carefully: 47 CFR 97.301(e).

As far as your potential conclusion that no-code technicians have HF privileges now, that is clearly erroneous.

Definitely a problem if you do not have a HF reciever at all. And those Rat Shack ones suck for that too. There used to be publication of VHF rebroadcasts of the w1aw transmissions, but I have yet to hear any around here in Michigan. Where the hell is the so-called field organization they are so proud of on this one? Even if it is a members-only thing, still you would think that the local (state-wise) field organizations would think that was important enough to rebroadcast.....

I would actually have to agree with Kim on this one. I have many times asked (tactfully and politely) certain questions of blind hams as to their experiences as hams dealing with the loss of sight as it relates to the hobby. They were definitely helpful and supportive in "educating" me to their circumstances. A definite thank you at the end of the questions with an explanation that I was trying to understand what it is like to be in their shoes definitely helped.

A completely different issue I had and/or have is not the speed as much as the audio pitch of the code being sent. It's hard as hell to get a VE team to adjust the pitch/tone sound at all if they even bother to send with a key. Hell, a couple of them are only using premade CD's, which are played a fixed rate and since most VE's are not frivolous (at all), they usually only have a "basic" cd player, and would not have equipment capable of code at a lower tone but keeping the same speed.

I say this because my hearing loss makes me hear "normally" sent code at its "proper" pitch rate as one long solid tone, as if you placed a finger on a straight key and never lifted up at all while sending. In other words, if there was a 2 minute QSO in morse code being sent at its "normal" pitch, it sounds like a 2 minute long T to me. If I lower the frequency of the tone of the amount of at least 200-250hz less, to where it starts becoming a more rich, bass(y) sounding tone, then I can distinguish the difference between a dit and a dah.

On a lighter note, I think my ex-wife had a voice in the same range as being sent at most VE sessions..... she said I never listened to her!

I believe you'll find plenty of legal precedent that says in such a case existing regulation prevails until such time
as it can be rewritten to eliminate any ambiguity. There's a practical reason for this of course. Otherwise chaos would
reigh.

By the time the chaff all settles out there'll be more dumasses with ham radio licenses than there ever was without any on 27mhz.

It's a shame too, because there ARE some
potentially good hams who won't/can't/don't learn the code. But sadly there are, and always have been, far, far more of the other type.

Seems there's never a good solution.

It won't keep 'em all out, that's for sure.

All of those violators also passed several written tests which included FCC
rules 'n' regs. Those written tests didn't stop 'em though. Shall we dump the
writtens 'cause they're not a perfect filter?

All that "variety of catcalls, music, snide comments, foul language,
noisemakers,
the infamous "dirty black box" and anything else in-between" - what mode were
those folks using? It sure wasn't CW/Morse.

Maybe it's not the code TEST but the code USE which is the filter.

Since many contries have individual bending of the rules, (US
technician, Japanese Low power HF as examples, there is already evidence
of some modification of the rules. This of course complicaes matters.

So we are left with starting from the premise that we or whatever
country is in initial compliance. That initial compliance is dated from
the day before the rule change.

This to me says that the present state is in compliance, even though
the requirement for the Morse test has been modified.

I certainly understand your argument. But when situations like this
crop up, and one rule interferes with another, those who would be called
on to make a ruling have to make it with the concept of the spirit of
the rule, plus they have to make rulings that do not throw the
institution into chaos.

You've finally gone over the edge, Lennie.

I TOLD you that this would happen.

See your MD ASAP before that stroke has a chance to manifest.

Sheeeesh.

I saw the list of "countries" you *allegedly* "worked" with all those
kilowatts and rhombics. Not exactly a sterling performance. I mean
holy cow in that same timeframe I worked every continent on the globe
several times over with my 0.05 Kw ARC-5 TX into a wire strung from my
bedroom window to a tree down the yard. I dunno what yer problem
was/is but if I were you I wouldn't spend much time bragging about my

HF operating exploits, they're notably lame.

And OhYez, I have written proof that I did what I claim I did with
that ARC-5 and the wire.

What are those "realistic needs and goals", Dwight?

We've already proven that no test at all is needed to get on HF and run some fair amount of power. Lot's of CB'ers do it all the time. It doesn't matter that it is illegal to do, that isn't the point. The point is that it didn't take any kind of formalized education or testing process for them to get on the air without doing damage to themselves.

But is that what we want? Some people do want just that. Interestingly enough, they applaud the likely elimination of the Morse code test, and will probably agitate for more. (or less depending on how you look at it)

That is why it is so critical for the NCTA's to buckle down and get things under control.

Your definition of necessary and reasonable. You should be trumpeting
that from the rafters at every chance. Because some others have a quite
different definition.

This is why it is so critical for the NCTA's to take up their
leadership role NOW. My definition of necessary and reasonable include a
test for Morse code. So all the other PCTA's and myself are immediately
marginalized and irrelevant.

Where on earth did you come up with that one, Dwight? I'd never say such a thing, and I'm a little disappointed you would try to inject that here.

Note that there is a big difference between expecting that a person has some level of adroitness and denying them because of some external and irrelevant factor.

There seems to be a bigger picture that the NCTA's are having trouble grasping.

After their victory, their people - in this case, *all* those who oppose Morse code testing are coming out of the woodwork. And they seem to be having problems recognizing their new resposibility. Dwight and I are not too different on the requirements to become a Ham. The problem is that a lot of other people in his camp have some drastically different ideas of what is realistic or reasonable.

Those are the people who need to be reigned in.

Question is, are the NCTA's up to the task?

> electronics engineering, something influenced by doing three
> years of large-scale military communications before 1956.

Amassing war stories of battles he didn't fight in, it seems.

Lucky for you you were better at investing your money than you
were in electronics, huh, Lennie?

> I can't help your obvious reading DISABILITY, old man. My bylines are
> still there and my mailing address is still the same. You WILL find my
> name on HR's masthead, too.

Yes...Your by-lines are there as is your name on some mastheads.

What's NOT there is any evidence that the work was yours, nor is
there any evidence of participation IN Amateur Radio, third-party
operator or otherwise.

And even MORE glaring is a lack of evidence that "your" work ever
influenced or complimented a single Amateur Radio related project or
program.

Not a one.

> There's a website with a complete listing of HAM RADIO Magazine

You must have forgotten how usenet works, kindly old gent. Perhaps
you'll want to engage in an e-mail exchange directly with Mike if it
bothers you when others comment on what you've written in this very
public place.

> Do you have multiple personalities? Or is your psychosis a mild one
> of simple hatred for anyone pointing out that you never did any
> glorious government radio pioneering in the 1980s.

You've called a number of people crazy over the past week or so. You
know what they say about one who believes that a number of others are
insane?

> >You aren't involved in amateur radio in any way.
>
> Not required.
>
> >You aren't a ham.
>
> The FDA hasn't been around to stamp my beef. Why do you think
> you can beef so much without such inspection?

from 9/5/96
Anderson: "Will I take a license exam? Probably. I'm a year from
retirement and it's only taken me two decades to achieve 3 WPM...

Will I recommend amateur radio as a hobby to a young person? Only guardedly and only after explaining everything that I've observed over the last four decades as a professional in the electronics/ communications industry."

Then there's that "Extra right out of the box". Apparently you aspire to become a ham as soon as the requirements have been lowered sufficiently. Perhaps you can obtain that Extra right out of the next box.

> >You aren't a regulator.
>
> NEITHER ARE YOU.

No kidding? I am involved in amateur radio. Since you aren't a regulator and you aren't a ham, your presence here and your fixation with amateur radio are a tad peculiar.

> Quit trying to play Raddio Kop. Or did you get one of those nice
> shields in the mail so that you can flip open your badge wallet and
> pretend to be some kind of officer? Were your friends and neighbors
> amazed and delighted at your "promotion?"

This isn't the "raddio" and I've not present myself as an enforcement official in amateur radio. Even if I was, it wouldn't matter. You aren't a part of amateur radio.

> >You aren't a budding neophyte.
>
> I was a "neophyte" in radio a half century ago. That quickly passed.

You have yet to become a neophyte in amateur radio. You'll become a beginner after passing a license exam. You'll have the opportunity to be a neophyte all over again.

> >You're a guy who delights in pointing out
> >his past accomplishments in military and commercial radio.
>
> Sorry, but you are LYING again. As I keep saying, the US Army quit
> using morse code modes for long-haul primary communications on HF
> in 1948. I began operating on HF in early 1953 as part of a team of four
> to keep a very large Army radio station operating 24 hours a day, seven
> days a week.

Let's look at a few Anderson quotes over a long period of time:

from 2/1/97

Anderson: "Ahem...as one who was _working_ in radio 40 years ago..."

from 9/13/96

Anderson: "Len - tested and passed Commercial 1st Radiotelephone 40 years ago."

from 9/13/96
Anderson: "Geoffrey, between 1953 and 1955 I was a fixed-station repairman, then supervisor on one team (of 4) at U.S. Army station ADA in Tokyo. With 27 transmitters (23 on HF bands), 108 TTY circuits, 7 voice circuits over the Pacific, 24 hours a day, I may have worked more traffic on HF than the average Extra ham will work in a lifetime. ADA pushed a quarter million TTY messages a month..."

from 12/10/96
Anderson: "In my case, I've already worked 24-hour-a-day "DX" on HF as a member of the U.S. Army in the 1950s...took and passed a Commercial Radiotelephone license in 1956...worked as a hands-on electronics engineer in successful design..."

from 10/8/96
Anderson: "Recall that I've worn the Army uniform and moved more traffic on the HF transmitters I operated and maintained in one month than any Extra class amateur has sent in an entire lifetime."

Any of that familiar to you?

> "It ain't braggin' if ya done it." I did it.

What is it you did in amateur radio, Len? You're more likely as a candidate for an amateur radio "Who's He?" than "Who's Who".

Calm down, Larry. The review is mandated. And the FCC already said
that the only reason they kept the code exam was the ITU requirement.
There is no longer an ITU requirement, so during the next review...

They did not "feel" that the 5wpm exam was acceptable. They "felt"
that it was required by the ITU.

Do you think the FCC reviewed Part 97 last time because they thought
it was a neat thing to do?

See Larry's reply. He's got something on the ball that you don't.

When are we going to hear "The "Pop" Heard Around the World" when you
pull your head out?

This is and has long been the common thread among codehaters. There is no logic nor proof involved, and now the NCVAEC has taken up the very same theme.
What a shame. I'm more than sure they'll have some crow to eat when all the commenting is done.

They face a $35BILLION budget shortfall for *this year* and they're not finished counting yet. All those
"feel good" deals, and Putzie's vaunted emergency services bills coming due. Wonder what will be left when
it all settles out?
Quick and dirty math, that's at least $1000 for each citizen, man-woman-child residing there. One has to wonder when the big exodus will begin. So they're about to fire their Governor,
not that he could have done much to avoid it all.

Well I see that you complied and stated the source and contents of the mandate,
Just like you validated your Somalia (alleged) operation.

As has been noted here many times, all the FCC has to do is state "We visited the code test issue less than three
years ago, and revisited it as the result of a
petition for reconsideration. We find no reason to revisit it again.

End of story

used!

Of course. That's not the point. The NCVEC petition tries to convey
the message of "nobody else uses Morse anymore" as if that has some
relevance to what hams do, and should be tested on.

>2) In this petition, they made NO adjustment to the "CW protected
bands."

>It is undoubted that someone will come along with a follow-up
petition to

Except there aren't any "CW protected bands" or "CW bands". There are
'phone/image subbands and CW/data subbands, however. Decreasing or
eliminating them without other measures being taken is not a good idea
at all.

Is it really that much trouble for people to learn to write "CW/data
subbands"? Because that's what they are, despite the fact that some
people think they are CW only.

>I would be in favor of reducing their size
>to between 1/3 and 1/4 of each band (in many places, it's 1/2 of the
band),
>but not complete elimination.

Let's take a look at what's in place now:

Band - Total kHz - CW-data/phone-image kHz %

160 - 200 - 0/200 - 0%/100%
80/75 - 500 - 250/250 - 50%/50%
40 - 300 - 150/150 - 50%/50%
30 - 50 - 50/0 -100%/0%
20 - 350 - 150/200 - 43%/57%
17 - 100 - 32/68 - 32%/68%

15 - 450 - 200/250 - 44%/56%
12 - 100 - 40/60 - 40%/60%
10 -1700 - 300/1400 - 18%/82%
Total
HF/MF 3750 - 1172/2578 - 31%/69%

So what we have right now is more than 2/3 of US HF/MF available to phone-image use. Except for 30 meters, no band is less than 50% phone-image. VHF/UHF is wide open for all modes except for two little CW-only stretches at the bottom of 6 and 2 meters.

Isn't that adequate? Why should the modes which are least spectrally efficent be rewarded with still more spectrum? NCVEC talks about new modes, technically knowledgeable people, yada yada yada, all the electropolitically correct buzzphrases. Will those people need wider phone/image subbands to use their manufactured rigs on SSB?

There might be a case for some adjustments, though, like creating a non-phone subband on 160, widening 75 a bit, adding modes other than CW to the 6 and 2 meter subbands, and creating CW-only subbands on each HF band.

>Along with CW in many places come some of the
>digital operating modes (at least on HF) - and those too need
protection from
>voice.

"Many places"? Try "everywhere". CW has no exclusive subbands except for those two on the bottom of 6 and 2. CW has to share every bit of non-phone HF/MF space with data modes. In a nocodetest future, that should change.

The petition talks about technically knowledgeable people and new modes and technologies. On HF, that stuff is almost exclusively happening in the CW/data subbands. Unless you count "single wideband" as a progressive new mode....

>PS: I haven't significantly used code since I passed it on the exam
for my
>license, nor do I plan to.

That's fine. There's a bunch of modes I had to learn about for the tests that I haven't used significantly, if at all, since I passed the test. Nor do I plan to.

A lot of hams, including me, use Morse very significantly. The NCVEC petition talks as if we code-using hams don't exist.

>(If you look me up, you'll know that I have at
>least 13wpm because I held an Advanced as my prior license class from
10
>years ago.)

How do I know you didn't get the Advanced via medical waiver? ;-) (Not that there's anything wrong with that!) Waivers have been available for over 13 years.

>> There is no requirement that any radio amateur actually use Morse code. Radio
>> amateurs use it by choice.

>Justification for it NOT to be a requirement.

Perhaps. Yet NCVEC did not pursue that line of reasoning, which could be a very powerful argument. Instead, they wrote as if they want code USE by hams to go away.

But the petition claims that hams ONLY use it because of the test requirement. That's just not true.

>> (Do we all know what requirement means? :-))

The whole world wonders.

>> Written tests are a burden to the applicants, too.

>Are you advocating no license testing at all?

Nope. Just the opposite.

> How about no licenses?

Nope, just the opposite.

> Having to fill out the paperwork is a burden too!

Exactly. And it turns away some people.

>(I am not advocating dropping the license requirement; just showing that his
>argument can be taken ad absurdium.)

Reductio ad absurdum is a valid technique of showing the validity of a hypothesis. If a hypothesis can be shown to logically lead to a contradiction or absurdity, the hypothesis must be false.

>> However, it should be noted that most of the Commission's enforcement actions
>> for poor and illegal operating practices such as jamming, obscenity/profanity,
>> failure to identify, operation outside of license privileges and failure to
>> heed bandplans are against amateurs using voice modes, not Morse code or
>> digital modes.

>Profanity, by itself, is illegal? The FCC has never said that. There may be
>limits and conditions where it's inappropriate, but there have been findings

>that in some very limited contexts that profanity by itself does NOT cause a
>violation to have occurred.

Doesn't change the basic fact of what I was pointing out: Phone operation generates far more enforcement actions than CW/data operations. Some of these enforcement actions are for behavior that is truly awful, and very embarrassing to the ARS.

When I first started out, I recall there was a common philosophy that 'phone operators had to set the highest possible standards of courtesy, respect and operating skill while on the air because anyone and everyone could be listening. That philosphy seems to have become inverted over the years.

>> Following this logic, the written exams should be stripped of anything a
>> licensee does not have an interest in.

>Does that include having to answer ANY question? :-)

Any question the examinee doesn't think is relevant. For example, why should someone who never, ever intends to use voice modes, or who may be physically unable to use them, have to learn about them? Isn't that a burden on them? Why should they have to learn something they'll never, ever use?

The NCVEC petition says it's a burden to require a code test to operate voice modes. If that's valid, why isn't it a burden to require questions on voice modes in order to operate CW or data modes? Look at all the written testing a ham has to go through just to operate a manufactured CW rig on 7005 kHz. Why?

Some might say "because it supports the basis and purposes of the ARS". The obvious response is "How?" Also, there is no requirement that each amateur support the basis and purposes of the ARS in any way other than following the rules.

What it all boils down to is that except for some very basic rules, regulations and safety considerations, most of the test requirements for an amateur license come down to somebody's opinion about what should be tested. Opinion and nothing more.

>> This proposal simply drops Element 1 without making any other changes. Oddly
>> enough, if it were adopted, Technicians would gain a bit of 10 meter SSB. Most
>> of the privileges Technicians would gain would be slices of 80, 40, 15 and 10
>> meter CW.

>I don't see a problem with that. What's your problem with it?

It's incomplete. It looks like the NCVEC had blinders on.

Do you really think that the very best we can do for entry-level HF privileges for new hams in a nocodetest 21st century future is to give them tiny slices of CW on four bands and SSB on one band, and at the same time give them all of amateur VHF/UHF? Is that really what's best for the ARS?

>This petition is meant to address the change in international agreement
>dropping the code requirement as a license prerequisite and NOTHING MORE.
>They're not out to overhaul the entire service; just this one part.

Which means FCC may do the whole NPRM cycle again for just that. Why not do something a little more comprehensive? Will the FCC be flooded with followup petitions? Probably. Carl, WK3C, has said here that's not the way to go. I agree with him. Are we both wrong?

>At least they're doing it in a way that has no impact on the rest of it.

>If you want to mess with the mandated bandplans, file your own petition.

Bandplans are voluntary. Subbands are part of the rules. I say the subbands could use some work. Let's see....3500-3575, CW only. 3575-3675, data and CW. 3675-3725, Data modes including digital voice, and CW. 3725-4000, phone....

There is no ambiguity here. There was direct dependence on a regulation external to that of the FCC's. Unless you're implying that the FCC's regulation itself was ambiguous or improper (for referring to an outside body of law, treaty, international agreement, etc.; something outside of its control), I don't see a problem.

It certainly does NOT work that way with 26 CFR and 31 CFR regulations so I have no expectation that 47 CFR regulations would. In those contexts, changes to the law (i.e. statute) immediately void regulations when those changes become effective (usually defined as "For years beginning on or after <date>").

No. What it means is that it no longer defines a requirement but an option.
47 CFR 97.301(e) is predicated on it being a requirement, which it isn't
anymore. That means that .301(e) has become VOID on its face.

I said "many places" because it is NOT true for 6m and 2m. "Everywhere" is
wrong. I chose my words carefully here, and your carelessness has introduced
error.

Because if I had used the medical waiver procedure, I would have been an Extra
back then..... I passed all the written elements in 1992 (3 in one session),

but didn't get 20wpm within a year (but got 13, and element 4B expired). The ease of element 4B back then should have clued you in....

Apparently, you've never been to Southern California. There were times where one could count the violations on our "animal farm" repeater - and sometimes the number of violations per minute would exceed the number of seconds in a minute. Most of those misfits are still licensed. Watch out HF - here they come!

And if the FCC didn't like that, then they'd take testing back and do it
themselves.

I disagree. They aren't looking to refarm the service; just take "one bite
from the apple." (It may be the first bite, but not the last.) Perhaps they
believe in taking SMALL steps and seeing what happens. Alternatively, since
their involvement is with testing, perhaps that's all they felt they could
justify.

I don't pretend to speak for what is best for the entire service. I've posted
my thoughts about licensing elsewhere.

Actually, bandplans aren't voluntary if someone can be cited for not following them (and that has happened). If they were clearly voluntary, then such a citation would be defeated (at least, defeatable) in an agency hearing.

Arrangements for a different tone have to be made in advance so that they
have time to obtain a CD or tape of the needed pitch from the VEC. You
can't just drop into a test session and expect them to have anything
different than the commonly used tone.

The CW subbands are already called out in the FCC regulations separately from the CW testing. Thus simply dropping the code test from the rules does not change the rules on the subband allocations. Thus the NCVEC petition does not need a provision to preserve the CW subbands.

No reason to give the Techs any more than what the current coded Techs get.
If they want more, they can take the General written. It's only slightly
harder than the Tech test.

Like "laughing" at 10 or 15 lines of posts? He HAS gone over
the edge. Poor pogue still trying to figure out how he got here and
why hasn't President Nixon got us out of Viet Nam yet.....

That's OK, though...I am sure he's happy, where ever his mind
is...

Thus substituting the judgment of the Chief,. Licensing and
Rxamination Branch (the guy - yes, one individual - who used to make
up the tests) for the judgment of the Question Pool Committee.
